Session Highlight: New York Session Pre-Open Briefing (1 Hr Before Open)

Session News Focus: Wall Street pre-market movers, US Federal Reserve news, mega-cap US stocks (NVDA, MSFT, TSLA), and WTI Crude Oil catalysts.

SECTION 0: DAILY MACRO & FINANCIAL NEWS DIGEST

1. Global Macro & Central Banks

- The Eurozone GDP grew by 0.4% in Q2, surpassing market expectations, increasing the likelihood of an ECB rate hike in September. The EURUSD is correcting after a strong rally but maintains upward momentum.
- The US Federal Reserve held interest rates unchanged at 3.50%-3.75% in its July meeting, with some policymakers dissenting for a hike due to elevated consumer inflation. This decision led to a weaker US dollar.
- South Korea's consumer inflation softened to a three-month low in July, driven by a fall in oil prices, yet policymakers remain wary of upward pressures, and a back-to-back rate hike is not ruled out.
- Japan's intervention, backed by the US Treasury, has helped the USD/JPY stabilize after a sharp loss, increasing the credibility of future yen-buying operations.
- The Reserve Bank of India (RBI) is likely to hold rates in August, maintaining a hawkish tone amid looming inflation risks.

2. US & European Markets

- Asian markets made cautious gains, following a global rally fueled by data showing US manufacturing activity increased to its highest level in over four years in July. This led the Dow Jones Industrial Average to a record close.
- Mega-cap tech stocks like NVDA, MSFT, and TSLA are expected to be key pre-market movers, influenced by overall positive market sentiment following strong US manufacturing data and a somewhat dovish Fed stance, despite hawkish dissent.
- European markets are responding to stronger Eurozone economic indicators, with the Euro finding support from improved GDP growth and inflation data.

3. Indian Markets & Dalal Street

- India's fuel exports reached a one-year peak in July, driven by robust diesel margins, Russia's diesel export ban, and ample crude availability during a brief US-Iran truce.
- The Rajya Sabha passed the Micro Small and Medium Enterprises (MSME) Development (Amendment) Bill, 2026, aimed at addressing delayed payments and improving liquidity for small businesses.
- A new Taxation and Other Laws (Amendment) Bill, 2026, is set to introduce tax incentives for electronics manufacturing, ease rules for foreign investment funds, and offer relief for REITs, InvITs, data centers, and sovereign debt investors.

4. Commodities & Crypto Wire

- WTI Crude Oil has broken down from a descending wedge pattern but is seeing a recovery attempt. Key resistance levels are identified around Fibonacci retracements ($81.74, $82.81, $83.89). Geopolitical tensions related to the US-Iran conflict and the Strait of Hormuz continue to influence prices.
- OPEC+ approved a fresh increase in oil production quotas for September by roughly 188,000 b/d, completing the phased reversal of voluntary supply cuts initiated in 2023. This marks the sixth consecutive monthly increase this year.
- Gold (XAU/USD) has spent six weeks consolidating above its yearly low, with the focus on a breakout to define the August trend. Key resistance is around $4312/19, while support is noted at $3700. Geopolitical developments and upcoming US labor market data (Nonfarm Payrolls) are significant catalysts.
- Crypto markets are likely influenced by overall risk appetite, with Bitcoin (BTC) and Ethereum (ETH) showing signs of high-volume volatility, potentially driven by macro sentiment rather than specific regulatory news today.
