Daily Multi-Asset Trading Blueprint & Level Execution Manual

Date: Monday, August 3, 2026

Session Highlight: New York Session Pre-Open Briefing (1 Hr Before Open)

Session News Focus: Wall Street pre-market movers, US Federal Reserve news, mega-cap US stocks (NVDA, MSFT, TSLA), and WTI Crude Oil catalysts.

SECTION 0: DAILY MACRO & FINANCIAL NEWS DIGEST

1. Global Macro & Central Banks

- The US dollar weakened sharply against the Japanese yen following confirmed joint intervention by the U.S. and Japanese governments to prop up the yen, which had recently touched 40-year lows. The dollar dipped to near 155.20 yen after the intervention, and early Monday, it dropped about 1% to 156.34 yen. Japan's Finance Minister confirmed the purchase of yen in coordination with the U.S. Treasury Department. Treasury Secretary Bessent's support for a Federal Reserve facility for Japan to bolster the yen is seen as safeguarding the US bond market from excessive sales.
- The Federal Open Market Committee (FOMC) held interest rates steady at its July 29 meeting. However, this meeting was notable for a historic level of dissension, with three bank presidents (Beth Hammack, Neel Kashkari, and Lorie Logan) dissenting in favor of a quarter-point rate hike, a situation not seen this early in a new Fed chair's tenure since 1970. The Fed and FDIC have also proposed raising the thresholds of credit that banks can extend to insiders.
- Brazil's central bank is anticipated to cut interest rates for the fourth consecutive time by a quarter-point to 14.00% at its August 5 meeting, amidst ongoing inflation concerns.
- Poland's manufacturing downturn eased sharply in July, with the PMI rising to 49.0 from 46.1 in June, indicating a slower decline in output and new orders, and the first increase in employment since April 2025.
- Conversely, France's manufacturing sector contracted in July as output and new orders accelerated their decline, with the PMI falling to 49.8 from 51.2 in June. Weak export demand and concerns over inflation and geopolitical events were cited as factors.
- The World Bank maintained its 2026 growth forecast for the Philippines at 3.7%, noting that economic recovery in 2027 is expected to be slower than previously projected due to weak investment, constrained consumption, and geopolitical crises.

2. US & European Markets

- US stock futures rose today as President Donald Trump called off planned military strikes against Iran, signaling a resumption of diplomatic negotiations. The S&P 500 rose 0.64%, the Dow Jones Industrial Average gained 1.2%, and the Nasdaq climbed 0.49% in early trading, while oil prices fell.
- The Q2 earnings season continues to exceed analyst expectations, with approximately 85% of S&P 500 companies beating estimates and aggregate profit growth tracking above 47%, marking one of the strongest earnings seasons in years. This week will see 138 S&P 500 companies report earnings.
- Mega-cap US stocks showed mixed pre-market movements. Microsoft (MSFT) was up 1.6% in pre-bell hours after a significant 3% increase on Friday. Microsoft's stock price increased 3.02% on Friday, July 31, from $451.10 to $464.72, and its Q2 earnings validated AI optimism, with Azure revenue topping $100 billion. NVIDIA (NVDA) opened at $200.75, up +5.75% year-to-date, but down from 2026 highs, presenting a potentially attractive entry point. Nvidia is expected to report Q2 2027 results on August 26, with analysts anticipating revenue and earnings to nearly double. Tesla (TSLA) stock price was noted to be at $321.95, up 3.4% as of July 29.
- European markets also opened higher, reacting to strong corporate earnings. Germany's DAX gained 1.3%, and France's CAC 40 climbed 1%.
- Key economic reports for the week include JOLTS, weekly initial jobless claims, and Friday's July jobs report, which will provide insight into the U.S. labor market's health.

3. Indian Markets & Dalal Street

- Indian benchmark indices surged today, with the BSE Sensex closing 540 points higher and the NSE Nifty50 ending the session above 24,770. This rally was attributed to a sharp decline in crude oil prices, easing geopolitical tensions, encouraging corporate earnings, and renewed buying by foreign institutional investors (FIIs). The Sensex opened over 500 points higher at 78,883.34, and the Nifty gained over 150 points, opening at 24,572.70.
- The Indian Rupee strengthened by 25 paise, opening at 95.14 to the dollar against Friday's close of 95.39, supported by positive domestic sentiment and easing crude oil pressure.
- India's equity markets are undergoing significant operational changes today, August 3, 2026, with the introduction of a Closing Auction Session (CAS) for Futures & Options (F&O) stocks, which will fundamentally alter how closing prices are determined. Equity derivatives trading hours have also been extended by 10 minutes, now ending at 3:40 PM.
- All sectoral indices, except Nifty Pharma, were trading higher in early Monday sessions.

4. Commodities & Crypto Wire

- WTI Crude Oil prices fell sharply today by over 6% to $79.10 per barrel, and Brent crude declined by over 5% to $83.24 per barrel. This significant drop is a direct result of President Trump calling off military strikes against Iran and announcing new diplomatic talks, easing fears of supply disruptions in the Strait of Hormuz. Despite the price retreat, hedge funds had recently boosted bullish oil positions, betting on escalating tensions.
- Gold futures were down 0.37% at $4,105.50 an ounce in early trading. Spot gold edged slightly higher overall.
- In the crypto market, Ripple (XRP) price was down 1.45% to $1.06, largely driven by broader crypto market weakness, with the total crypto market cap falling 0.77%. However, Ripple announced new strategic investments in Zilo and Licuido, firms focused on developing infrastructure for tokenized funds and institutional asset trading, aiming to bring regulated fund issuance onto the XRP Ledger.
- Binance announced it would delist six crypto tokens (Across Protocol, Hashflow, PIVX, Vulcan Forged PYR, Vanar, Viction) from its spot market on August 17 as part of its project review.
- Robinhood has received regulatory permission to begin offering cryptocurrency services in the United Kingdom, being added to the Financial Conduct Authority's list of registered cryptoasset companies.
- Bitmine Immersion Technologies announced its ETH holdings reached 5.8 million tokens, with total crypto and cash holdings of $11.3 billion as of August 2, 2026.

CAPITAL BASE & ALLOCATION RULES ($3,000 TOTAL)

- **Crypto Futures:** $400 (13.3%) | Rec. Leverage: 3x–5x Isolated | Risk Cap: 1–2% ($4–$8)
- **Indian Options (Intraday):** $500 (16.7%) | Option Buying Only | Risk Cap: 10–15% Premium ($30–$45)
- **Commodities (Micro Gold & Oil):** $400 (13.3%) | Rec. Leverage: 10x–15x Micro Lots | Risk Cap: 2% ($8)
- **US Stocks (Fractional):** $400 (13.3%) | 1x Unleveraged Cash | Risk Cap: 3% ($12)
- **Indian Stocks (Delivery):** $400 (13.3%) | 1x Unleveraged Cash | Risk Cap: 5% ($20)
- **Forex Short-Term Futures:** $450 (15.0%) | Rec. Leverage: 10x–20x | Risk Cap: 1% ($4.50)
- **Forex Long-Term Carry Swing:** $450 (15.0%) | Rec. Leverage: 2x–3x | Risk Cap: 2% ($9.00)

STRATEGY-BASED DAILY TICKER SELECTION & SECTOR CONSTRAINTS

(Note: Ticker selections are illustrative based on current news and hypothetical application of strategies. Live market screening would be required for real-time execution.)

1. INDIAN EQUITIES (STRICTLY LONG-ONLY)

Ticker	Sector	Strategy & Selection Reason
Indigo (INGL)	Airline	**Nifty Leader - 50-SMA Support Bounce / 20/50 EMA Golden Cross:** Recent news highlights Indigo trading around 4% higher as its new CEO takes charge, signaling strong growth prospects. Assuming a recent pullback to its 50-SMA or a confirmed 20/50 EMA golden cross on daily charts, this would present a strong long opportunity given the positive sentiment and FII inflows into Indian markets.
Bajaj Finance (BAJFINANCE)	Financial Services	**Nifty Leader - 50-SMA Support Bounce / 20/50 EMA Golden Cross:** Mentioned as a major gainer driven by strong quarterly earnings and strong buying sentiment in the Finance sector. A setup around its 50-SMA as support or a bullish EMA crossover would indicate continued upward momentum.

2. US EQUITIES

Large-Cap (BI-DIRECTIONAL)

Ticker	Sector	Strategy & Selection Reason
Microsoft (MSFT)	Technology	**21-day EMA Pullback (Long):** MSFT showed strong performance recently, up 1.6% pre-market and 3.02% on Friday, with Q2 earnings beating expectations and Azure revenue topping $100 billion, validating AI optimism. A pullback to the 21-day EMA during the New York session would offer a low-risk entry for a long position, anticipating continuation of the upward trend fueled by AI monetization.
NVIDIA (NVDA)	Semiconductor	**50-day SMA Rejection (Short) / 21-day EMA Pullback (Long):** NVDA is currently trading at $200.75, below its 2026 highs, but analysts remain bullish with a "Buy" consensus and a target price of $304.26. Given its high beta (2.23), a rejection from its 50-day SMA after a rally could signal a short opportunity. Conversely, if it finds strong support at the 21-day EMA after a minor dip, a long position aiming for a rebound towards previous highs could be considered, especially with upcoming Q2 2027 earnings on August 26.
Tesla (TSLA)	Automotive	**21-day EMA Pullback (Long):** TSLA was up 3.4% as of July 29. If the stock shows a sustained uptrend, a healthy pullback to its 21-day EMA on strong volume could signal a buying opportunity for a bounce, consistent with mega-cap growth leaders.

Mid-Cap & Small-Cap (STRICTLY LONG-ONLY)

Ticker	Sector	Strategy & Selection Reason
Ferguson Enterprises (FERG)	Plumbing Supply	**High Relative Volume (RVOL > 2.0) Breakout:** Climbed 7.7% in premarket trading as it prepares to join the S&P 500, indicating strong institutional interest and potential for a breakout on high relative volume when the market opens.

3. CRYPTO FUTURES (BI-DIRECTIONAL)

Ticker	Category	Strategy & Selection Reason
XRP/USD	Large-Cap	**4H 21-EMA Trend Following (Short Bias):** XRP is down 1.45% to $1.06, largely due to broader crypto market weakness and a "risk-off" tone, having recently broken below a symmetrical triangle pattern. It faces resistance at its 50-day average ($1.09) and 100-day average ($1.10). A bounce to the 4H 21-EMA followed by a rejection could offer a short entry, anticipating further downward movement towards the critical support zone of $1.01–$1.04.
ETH/USD	Large-Cap	**High-Volume Volatility Breakout (Long):** Bitmine Immersion Technologies announced significant ETH holdings and staking, highlighting strengthening fundamentals for crypto. While overall crypto sentiment is "risk-off", a strong bullish candlestick breaking above recent resistance on high volume on the 4H chart, indicating a volatility breakout, could signal a long entry. This would be a counter-trend play based on underlying positive news for Ethereum ecosystem.

4. COMMODITIES (BI-DIRECTIONAL)

Ticker	Commodity	Strategy & Selection Reason
WTI Crude Oil (CL=F)	Energy	**Pivot & Fibonacci Extension Levels (Short Bias):** WTI Crude has plunged over 6% to $79.10 per barrel due to easing Iran tensions. The immediate bias is short. Look for a retracement to a key Fibonacci resistance level (e.g., 38.2% or 50% retracement of the recent sharp drop) combined with pivot point resistance for a short entry, targeting further downside towards Fibonacci extension levels (e.g., 1.272 or 1.618 extensions) below current lows. Daily resistance around $82.00-$83.00, with support levels around $78.00-$77.00.
Gold (XAU/USD)	Precious Metal	**Pivot & Fibonacci Extension Levels (Long Bias):** Gold futures were slightly down at $4,105.50. Given global geopolitical uncertainties (despite Iran de-escalation, others persist) and a divided Fed, gold could remain a safe-haven asset. Look for a bounce from a key Fibonacci support level (e.g., 50% or 61.8% retracement from a recent swing low) aligning with a daily pivot point for a long entry. Targeting Fibonacci extension levels upwards. Immediate support around $4090, resistance around $4120.

5. FOREX FUTURES (BI-DIRECTIONAL)

Pair	Type	Strategy & Selection Reason
USD/JPY	Macro Carry Swing	**Swing Trade (Short Bias):** The USD/JPY pair experienced significant weakening of the dollar against the yen due to joint US-Japan intervention, with the dollar dropping about 1% to 156.34 yen. This signals a strong bearish momentum. Look for short opportunities on minor pullbacks or consolidations within the new downward trend. Target significant swing lows or support levels from before the recent yen weakness.
EUR/USD	Short-Term Futures	**Short-Term Trend Following (Neutral-to-Long Bias):** The Euro fell to $1.1527 from $1.1549. Given European markets opened higher, a short-term long position could be considered if the pair breaks above a short-term resistance level on increasing volume, signaling a potential reversal or strength. Alternatively, a break below recent support on increasing volume could initiate a short.
AUD/USD	Macro Carry Swing	**Swing Trade (Long Bias):** Australian S&P/ASX 200 gained 0.2%. With positive sentiment from global de-escalation of tensions and general market buoyancy, look for a long entry on an established bullish swing. Identify major support levels for entry and target significant resistance zones for profit-taking, aiming for a longer-term trend upwards.

6. INDIAN OPTIONS (BI-DIRECTIONAL)

Index	Direction	Strategy & Selection Reason
Nifty 50 (NIFTY)	Call for Long / Put for Short	**15-Minute Opening Range Breakout (ORB):** Given the Indian markets opened higher on positive global cues, a bullish breakout above the initial 15-minute range on Nifty 50 would trigger a Call option purchase. Conversely, a bearish breakdown below the 15-minute range (less likely given current sentiment, but prepared for) would trigger a Put option purchase. Focus on high implied volatility options for potential quick gains.
BankNifty (BANKNIFTY)	Call for Long / Put for Short	**15-Minute Opening Range Breakout (ORB):** Similar to Nifty 50, Bank Nifty was also trading higher by 0.46% in early Monday sessions. A confirmed breakout above its 15-minute opening range would signal a Call option entry. A breakdown would suggest a Put option. Observe banking sector momentum for confirmation.

PERFORMANCE METRICS & EQUITY CURVE

10-Year Backtest Metrics (Hypothetical Multi-Asset Portfolio)

Metric	Portfolio	S&P 500 TRI	Nifty 50 TRI
