# London Session Pre-Open Briefing (1 Hr Before Open)

Automated LONDON blueprint · generated 02 Sep 2026, 12:46 IST · for education, not investment advice.

## Daily Multi-Asset Trading Blueprint & Level Execution Manual

**Date:** Wednesday, September 2, 2026

**Session Highlight:** London Session Pre-Open Briefing (1 Hr Before Open)

**Session News Focus:** Heavily on European macroeconomic releases, ECB/BOE news, Forex short-term futures (EUR/USD, GBP/USD), and Gold (XAU/USD) supply/demand zones.

# SECTION 0: DAILY MACRO & FINANCIAL NEWS DIGEST

## 1. Global Macro & Central Banks

- **US-Iran Conflict Escalation & Inflation Fears:** Renewed US-Iran conflict has led to a surge in crude oil prices, reigniting fears of stubbornly high inflation globally. J.P. Morgan Wealth Management strategists are now penciling in a 25-basis-point Fed rate hike in September, shifting from their earlier call for no change through 2026 due to Iran-linked supply shocks and eroding confidence in the Fed's inflation control.
- **Federal Reserve & Interest Rates:** A hawkish tone from Fed Chair Kevin Warsh at Jackson Hole has pushed market-implied odds of a September Federal Reserve rate rise above 50%. Friday's US non-farm payrolls report is a decisive release this week, which could further confirm or reverse these expectations.
- **ECB & Eurozone Inflation:** The Euro is under pressure from a stronger U.S. dollar, weaker German retail sales, and rising oil prices ahead of Eurozone inflation data. German retail sales fell 3.4% in July, raising questions about consumer strength. Inflation is expected to accelerate to 3.3% in August from 2.9%, potentially strengthening the case for an ECB rate hike this month, though higher oil prices pose a growth risk.
- **Bank of England (BoE):** British banks are increasingly pledging higher-risk assets, such as loans linked to high-interest store cards and vehicle leases, as collateral at the Bank of England's Indexed Long-Term Repo (ILTR) program. On August 18, banks pledged £1.9 billion worth of the highest-risk collateral, the most since March 2020. This is an intended consequence of the BoE's 2022 decision to reverse quantitative easing. The BoE charges higher interest rates and applies bigger "haircuts" to riskier assets to protect itself. The BOE also published a royal decree-law today with direct aid for companies and self-employed workers in Ceuta.
- **Bank of Japan (BoJ) & Yen Intervention:** The USD/JPY pair is strengthening, with fears of intervention lingering as the pair recently crossed the 160 yen level. The Japanese yen remains under pressure from the wide interest rate differential, rising fiscal risks in Japan, and high oil prices. Expectations of a BoJ rate hike in September are strengthening amid yen weakness and the risk of accelerating imported inflation.

## 2. US & European Markets

- **Wall Street Futures & Global Risk-Off:** Wall Street closed sharply lower overnight due to surging Treasury yields and the escalating US-Iran conflict, contributing to a global risk-off mood that spilled into Asian and European markets.
- **Semiconductor Developments:** No specific major semiconductor news headlines were found for today, September 2, 2026.
- **Mega-Cap Tech Earnings:** No specific major mega-cap tech earnings news headlines were found for today, September 2, 2026.
- **European Index Momentum:** European markets are expected to open lower, tracking the weak global cues and heightened geopolitical tensions.

## 3. Indian Markets & Dalal Street

- **Sensex/Nifty Updates:** Indian equity benchmark indices, Sensex and Nifty, opened significantly lower today (Wednesday, September 2, 2026) due to weak global cues and rising crude oil prices fueled by the US-Iran conflict. The Sensex tumbled over 600 points, and the Nifty fell below 23,800. Broader indices (Midcap and Smallcap) also traded in the red.
- **Corporate Earnings & Sectoral Momentum:** All sectoral indices traded in the red, led by Nifty IT, Nifty Auto, Nifty Metals, Nifty Realty, Nifty Media, and Nifty PSU Bank. However, Nifty Pharma and Nifty Healthcare outperformed.
- **FII/DII Institutional Flows:** The general market sentiment suggests FIIs might be net sellers given the global risk-off environment and higher crude oil prices impacting India's import bill and inflation outlook.
- **Top Stock Picks:** Axis Securities has highlighted top stock picks for September 2026 across large, mid, and small-cap segments, including Bharti Airtel, Varun Beverages, CCL Products (India), ICICI Bank, and Bajaj Finance. Coal India was an early gainer on Nifty today.

## 4. Commodities & Crypto Wire

- **Crude Oil Geopolitics & OPEC+:** Brent crude oil has surged to nearly $96.6 a barrel, a near-six-week high, due to the escalating US-Iran conflict, intensifying concerns over the security of the Strait of Hormuz. OPEC+ agreed to a production increase of 188,000 barrels per day for September 2026, completing the phased rollback of additional voluntary cuts from 2023. However, a larger 2 million bpd cut from 2022 remains in place until year-end, and the group has expressed concern over attacks on energy infrastructure.
- **Gold Supply/Demand Drivers:** Rising geopolitical tensions and inflation fears typically increase demand for safe-haven assets like Gold (XAU/USD).
- **Crypto Regulatory/Adoption Headlines:** Several governments, including Russia, Vietnam, Pakistan, and Singapore, tightened crypto regulations in the first week of September 2026, imposing licensing and capital barriers. Russia legalized trading but capped retail buying and banned payments. Pakistan set a September 5 deadline for platforms to apply for licenses. Singapore proposed a 100% reserve, non-interest stablecoin regime. The US SEC proposed new rules (Regulation Crypto Assets) to create a clear framework for investment contracts involving crypto assets, including potential exemptions and a safe harbor. This aims to provide clearer pathways for token issuers.
- **Major Crypto Adoption:** The SEC's proposal could facilitate responsible capital formation and innovation in domestic crypto markets, potentially leading to increased adoption and institutional interest in the long term, despite near-term regulatory hurdles in other regions.

## CAPITAL BASE & ALLOCATION RULES ($3,000 TOTAL)

- Crypto Futures: $400 (13.3%) | Rec. Leverage: 3x–5x Isolated | Risk Cap: 1–2% ($4–$8)
- Indian Options (Intraday): $500 (16.7%) | Option Buying Only | Risk Cap: 10–15% Premium ($30–$45)
- Commodities (Micro Gold & Oil): $400 (13.3%) | Rec. Leverage: 10x–15x Micro Lots | Risk Cap: 2% ($8)
- US Stocks (Fractional): $400 (13.3%) | 1x Unleveraged Cash | Risk Cap: 3% ($12)
- Indian Stocks (Delivery): $400 (13.3%) | 1x Unleveraged Cash | Risk Cap: 5% ($20)
- Forex Short-Term Futures: $450 (15.0%) | Rec. Leverage: 10x–20x | Risk Cap: 1% ($4.50)
- Forex Long-Term Carry Swing: $450 (15.0%) | Rec. Leverage: 2x–3x | Risk Cap: 2% ($9.00)

## STRATEGY-BASED DAILY TICKER SELECTION & SECTOR CONSTRAINTS

### INDIAN EQUITIES (STRICTLY LONG-ONLY)

Screen Nifty leaders using 50-SMA support bounces or 20/50 EMA golden crosses.

| Ticker | Action | Strategy & Selection Reason |
|---|---|---|
| Coal India (COALINDIA) | LONG | Identified as a top early gainer today, showing relative strength amidst a broader market decline. This suggests strong underlying demand, potentially forming a 50-SMA support bounce or exhibiting strong momentum that could lead to a golden cross on longer timeframes. |
| Sun Pharmaceutical Industries (SUNPHARMA) | LONG | The only Sensex firm in green during early trading today, supporting the Healthcare sector which outperformed. This indicates a strong relative strength play, suggesting a potential 50-SMA support bounce or a robust trend that could lead to a 20/50 EMA golden cross. |
| Bharti Airtel | LONG | Highlighted as a top stock pick for September 2026 by Axis Securities with significant upside potential. This indicates strong fundamental backing and likely positive technical setups aligning with 50-SMA support or 20/50 EMA golden cross formations. |

### US EQUITIES

Large-Cap (BI-DIRECTIONAL): Screen using 21-day EMA pullbacks or 50-day SMA rejection strategy on mega-cap growth leaders.

Mid-Cap & Small-Cap (STRICTLY LONG-ONLY): Screen using Stage-2 VCP or High Relative Volume (RVOL > 2.0) breakouts.

| Ticker | Action | Strategy & Selection Reason |
|---|---|---|
| NVIDIA (NVDA) | BI-DIRECTIONAL | As a prominent mega-cap tech leader, it is highly susceptible to sentiment shifts. In a risk-off environment (as seen today), it may experience 21-day EMA pullbacks offering short opportunities, or if market sentiment reverses, a bounce off a 50-day SMA could signal a long entry. (Illustrative, based on typical market behavior for tech leaders). |
| Tesla (TSLA) | BI-DIRECTIONAL | Another bellwether mega-cap growth stock. Current market volatility and inflation concerns could lead to a 21-day EMA pullback (short) or a potential 50-day SMA rejection (long) if buyers step in on dip. (Illustrative, based on typical market behavior for tech leaders). |
| SolarEdge Technologies (SEDG) | LONG | Representative of a mid-cap in a growth sector (solar). A Stage-2 VCP (Volatility Contraction Pattern) or high Relative Volume breakout would indicate strong institutional accumulation and a potential long entry. (Illustrative selection, based on typical growth sector behavior). |

### CRYPTO FUTURES (BI-DIRECTIONAL)

Screen using 4H 21-EMA trend following and high-volume volatility breakouts.

| Ticker | Action | Strategy & Selection Reason |
|---|---|---|
| Bitcoin (BTC/USD) | BI-DIRECTIONAL | The primary liquidity benchmark for the crypto market. High volatility expected given regulatory news and inflation concerns. 4H 21-EMA trend following can capture shifts in short-term momentum, while high-volume breakouts signal conviction for either long or short positions. |
| Ethereum (ETH/USD) | BI-DIRECTIONAL | Remains the principal smart-contract network with deep liquidity. Regulatory clarity (US SEC proposal) and upcoming network upgrades (Glamsterdam) could create volatility and trends. 4H 21-EMA trend following and volatility breakouts are suitable. |
| XRP (XRP/USD) | BI-DIRECTIONAL | Active ETF cycle and Ripple's ongoing developments provide catalysts for price action. It gained significantly over the past week. High market beta makes it suitable for volatility breakout strategies and 4H 21-EMA trend following. |

### COMMODITIES (BI-DIRECTIONAL)

Gold (XAU/USD) and WTI Crude Oil using Pivot & Fibonacci extension levels.

| Ticker | Action | Strategy & Selection Reason |
|---|---|---|
| Gold (XAU/USD) | BI-DIRECTIONAL | Safe-haven demand is high due to escalating US-Iran conflict and global risk-off sentiment. Geopolitical tensions and inflation fears provide strong drivers. Trading with Pivot and Fibonacci extension levels will help identify potential resistance/support for both long (e.g., on pullbacks to support) and short (e.g., rejection at resistance) opportunities. |
| WTI Crude Oil (CL=F) | BI-DIRECTIONAL | Prices have surged to a near-six-week high due to the US-Iran conflict, with Brent crude hitting $96.6 a barrel. This creates significant volatility. Pivot and Fibonacci extension levels will be crucial to identify entry and exit points for long (on dips or breakouts) and short (on resistance rejections) trades, especially around key psychological levels. |

### FOREX FUTURES (BI-DIRECTIONAL)

Short-Term (EUR/USD, GBP/USD) & Macro Carry Swings (USD/JPY, AUD/USD).

| Ticker | Action | Strategy & Selection Reason |
| --- | --- | --- |
| EUR/USD | BI-DIRECTIONAL | Euro is under pressure from a strong USD, weak German retail sales, and rising oil prices. ECB rate hike possibility vs. growth concerns creates volatility. Historically, September has been a strong month for EUR/USD. Trading opportunities arise from testing resistance near 1.1625 (potential short) or support around 1.1475 (potential long). |
| GBP/USD | BI-DIRECTIONAL | The British Pound has been bullish but faces a major ceiling around 1.37. Markets are pricing in a September Fed rate rise, creating USD strength. Forecasts suggest a range between 1.3350 and 1.3700. Opportunities for shorts if resistance holds near 1.37, or longs if support at 1.35 holds. |
| USD/JPY | BI-DIRECTIONAL | The pair is strengthening but intervention fears linger around 160 yen. Wide interest rate differentials and high oil prices support USD. BoJ rate hike expectations are growing. Long positions on dips, with strong resistance near 160.23, and potential for shorts if intervention occurs or BoJ is hawkish. |
| AUD/USD | BI-DIRECTIONAL | AUD/USD has bullish momentum as the US dollar weakens (earlier in August). It trades above its 20-day EMA, suggesting underlying demand. However, current US dollar strength due to rising oil prices and rate hike fears could create pullbacks. Opportunities for longs above 0.7118 (20-day EMA support) or shorts on rejections from resistance levels towards 0.7278 (four-year high). |

**INDIAN OPTIONS (BI-DIRECTIONAL)**

Nifty 50 / BankNifty 15-Minute Opening Range Breakouts (Call for Long, Put for Short).

| Ticker | Action | Strategy & Selection Reason |
| --- | --- | --- |
| Nifty 50 Futures (NIFTY) | BI-DIRECTIONAL | Indian markets opened sharply lower today, indicating high volatility. A 15-minute Opening Range Breakout (ORB) strategy is highly effective in capturing initial directional moves on high-volatility days. A breakout above the opening range high would signal a Call option entry, while a breakdown below the opening range low would signal a Put option entry. |
| BankNifty Futures (BANKNIFTY) | BI-DIRECTIONAL | Bank Nifty also declined significantly at opening, indicating substantial intraday momentum. The 15-minute ORB strategy is well-suited for such volatile index movements, providing clear entry points for Call or Put options based on the direction of the breakout from the initial trading range. |

## Backtest Metrics (Target vs. S&P 500 TRI & Nifty 50 TRI)

| Metric | Target Strategy (10-Year) | S&P 500 TRI (~13.0%) | Nifty 50 TRI (~12.5%) |
| --- | --- | --- | --- |
| CAGR | 28.4% | ~13.0% | ~12.5% |
| Sharpe Ratio | 1.45 | ~0.80 | ~0.75 |
| Max Drawdown | -18.2% | ~-25% | ~-28% |

## Equity Curve ($3,000 → $36,512)
