Daily Multi-Asset Trading Blueprint & Level Execution Manual

Date: Monday, August 31, 2026

Session Highlight: New York Session Pre-Open Briefing (1 Hr Before Open)

Session News Focus: Wall Street pre-market movers, US Federal Reserve news, mega-cap US stocks (NVDA, MSFT, TSLA), and WTI Crude Oil catalysts.

SECTION 0: DAILY MACRO & FINANCIAL NEWS DIGEST

1. Global Macro & Central Banks

- US Federal Reserve Chair Kevin Warsh delivered a hawkish address at Jackson Hole, reiterating the 2% inflation target and hinting at potential interest rate increases, which has led to a significant increase in the probability of a September Fed rate hike (57-60%).
- This hawkish stance has contributed to a stronger US Dollar, placing downward pressure on EUR/USD and AUD/USD, while supporting gains in USD/JPY.
- Inflationary risks persist within the Eurozone, with markets currently factoring in the possibility of a European Central Bank (ECB) rate hike in September.
- Australia's core inflation remained stubbornly high at 3.6%, exceeding forecasts, prompting the Reserve Bank of Australia (RBA) to signal a willingness for further rate hikes.
- Escalating geopolitical tensions in the Middle East, specifically US forces striking Iranian rocket launchers near the Strait of Hormuz, are creating a persistent headwind for risk assets, driving crude oil prices higher and intensifying inflation concerns globally.

2. US & European Markets

- US stock futures are indicating a lower open across the Dow, S&P 500, and Nasdaq, influenced by renewed US-Iran conflict and hawkish Federal Reserve signals. The S&P 500 and Russell 2000 began the week with declines.
- Mega-cap US tech stocks are showing mixed pre-market performance:
- Nvidia (NVDA) was up 0.5% pre-market, recovering from a 4.6% drop on Friday, buoyed by record revenue ($96.2 billion for the quarter ended July 31, 2026) and positive analyst sentiment leading to raised price targets.
- Tesla (TSLA) experienced a 0.36%-0.5% decline pre-market, but has been on an upward trend throughout August due to strong EV demand, approval for its Robotaxi network, and plans for Optimus humanoid robot production.
- Notable pre-market movers include Science Applications International Corp. (SAIC) surging 8.13%, Petco Health & Wellness Co. (WOOF) climbing 4.9%, and VeriSign (VRSN) jumping 4.8%, all driven by better-than-expected Q2 results. Conversely, PG&E Corp. (PCG) was a significant pre-market loser, down nearly 20%.
- Corporate profits saw a substantial 9.1% jump in Q2 2026, marking a 22.8% annual increase. However, consumer expectations regarding the economy became slightly more pessimistic in August, with an increased likelihood of a recession.

3. Indian Markets & Dalal Street

- Indian benchmark indices, Sensex and Nifty 50, opened and traded lower on Monday, falling approximately 280-307 points (0.37-0.40%) and 95-115 points (0.39-0.48%) respectively.
- This market downturn was attributed to surging crude oil prices, rekindled US-Iran tensions, and heightened expectations of tighter US monetary policy.
- Most sectoral indices in India were trading in negative territory, with Nifty Metal, IT, PSU Bank, Realty, and Media sectors experiencing declines of up to 3%. The Nifty MidCap 100 index, however, closed 0.24% higher, while the Nifty SmallCap 100 index fell 0.74%.
- Foreign Institutional Investors (FIIs) have maintained a buying streak, investing Rs 30,919 crore in Indian equities in August. Nevertheless, sustained inflows require higher earnings growth amidst rising US risk-free rates.
- Life Insurance Corporation (LIC) shares saw a 1.07% drop on August 31st following news of the launch of two new insurance products.
- Key upcoming economic indicators for India include the Q1 FY27 GDP data and the US August non-farm payrolls report, due on September 4.

4. Commodities & Crypto Wire

- **Crude Oil:** WTI Crude Oil prices are surging over 3% pre-market, with Brent crude rising around 2.5% to approximately $90 a barrel. This sharp increase is a direct result of the renewed US-Iran conflict and escalating concerns over potential supply disruptions through the Strait of Hormuz.
- **Gold:** Gold is currently experiencing a short-term downtrend. Silver futures, in contrast, rose 0.19% to $67.92 an ounce in early trading.
- **Crypto:** Russia's largest bank, Sberbank, forecasts that the regulated crypto trading volume on Russian exchanges could reach $46.4 billion in the first year following the new legislation, which takes effect on September 1, 2026. The new regulatory framework allows registered entities to operate as exchanges and sets limits for retail investors (capped at 300,000 rubles or approximately $3,700 annually per intermediary). Separately, the U.S. Securities and Exchange Commission (SEC) proposed new rules on August 18, 2026, titled "Regulation Crypto Assets," aiming to create a tailored offering regime for crypto investment contracts, acknowledging the inadequacy of existing disclosure rules for this asset class.

CAPITAL BASE & ALLOCATION RULES ($3,000 TOTAL)

Asset Class	Allocation	% of Total	Rec. Leverage	Risk Cap
Crypto Futures	$400	13.3%	3x–5x Isolated	1–2% ($4–$8)
Indian Options (Intraday)	$500	16.7%	Option Buying Only	10–15% Premium ($30–$45)
Commodities (Micro Gold & Oil)	$400	13.3%	10x–15x Micro Lots	2% ($8)
US Stocks (Fractional)	$400	13.3%	1x Unleveraged Cash	3% ($12)
Indian Stocks (Delivery)	$400	13.3%	1x Unleveraged Cash	5% ($20)
Forex Short-Term Futures	$450	15.0%	10x–20x	1% ($4.50)
Forex Long-Term Carry Swing	$450	15.0%	2x–3x	2% ($9.00)

STRATEGY-BASED DAILY TICKER SELECTION & SECTOR CONSTRAINTS

INDIAN EQUITIES (STRICTLY LONG-ONLY)

Screen Nifty leaders using 50-SMA support bounces or 20/50 EMA golden crosses.

Ticker	Strategy Applied	Strategy & Selection Reason
SUNPHARMA	50-SMA Support Bounce	Identified as a top gainer recently, suggesting underlying strength. A pullback to and bounce off its 50-day Simple Moving Average indicates a strong support level holding, offering a low-risk long entry point within a broader uptrend.
HDFCBANK	20/50 EMA Golden Cross	HDFC Bank showed resilience amidst overall market weakness. A golden cross (20-day EMA crossing above 50-day EMA) signals increasing short-term momentum overcoming longer-term consolidation, indicating a potential new bullish trend.

US EQUITIES

Large-Cap (BI-DIRECTIONAL)

Screen using 21-day EMA pullbacks or 50-day SMA rejection strategy on mega-cap growth leaders.

Ticker	Strategy Applied	Strategy & Selection Reason
NVDA (Long)	21-day EMA Pullback	Nvidia (NVDA) showed pre-market strength and reported strong earnings. A pullback to the 21-day Exponential Moving Average (EMA) after an earnings-fueled surge provides an opportunity to enter long, anticipating a continuation of the upward trend as demand for AI infrastructure remains robust.
MSFT (Short)	50-day SMA Rejection	Assuming Microsoft (MSFT) has seen recent consolidation or minor weakness, a rejection from its 50-day Simple Moving Average (SMA) suggests that the longer-term bullish momentum is faltering or facing strong resistance, making it a candidate for a short position if confirmed by bearish price action.

Mid-Cap & Small-Cap (STRICTLY LONG-ONLY)

Screen using Stage-2 VCP or High Relative Volume (RVOL > 2.0) breakouts.

Ticker	Strategy Applied	Strategy & Selection Reason
SAIC (Science Applications International Corp.)	High Relative Volume (RVOL > 2.0) Breakout	SAIC surged 8.13% pre-market on better-than-expected Q2 results. A significant increase in Relative Volume (RVOL > 2.0) accompanying this price jump indicates strong institutional interest and potential for a sustained breakout, aligning with Stage-2 characteristics.
WOOF (Petco Health & Wellness Co.)	Stage-2 VCP Breakout	Petco (WOOF) climbed 4.9% pre-market amid broader market optimism and business turnaround signs. This could represent a volatility contraction pattern (VCP) breakout, where the stock tightens into a pivot point before a significant upward move, indicating strong accumulation.

CRYPTO FUTURES (BI-DIRECTIONAL)

Screen using 4H 21-EMA trend following and high-volume volatility breakouts.

Ticker	Strategy Applied	Strategy & Selection Reason
BTC/USD (Long)	4H 21-EMA Trend Following & High-Volume Volatility Breakout	Given positive regulatory news from Russia potentially boosting crypto sentiment, a bullish trend following setup where Bitcoin is consistently trading above its 4-hour 21-EMA, coupled with a high-volume breakout, suggests strong buying pressure.
ETH/USD (Short)	4H 21-EMA Trend Following & High-Volume Volatility Breakout	While Bitcoin sees positive news, broader crypto market sentiment can be mixed. A bearish trend following setup for Ethereum, with ETH/USD trading below its 4-hour 21-EMA and showing high-volume volatility on the downside, indicates potential shorting opportunities due to profit-taking or broader market anxieties.

COMMODITIES (BI-DIRECTIONAL)

Gold (XAU/USD) and WTI Crude Oil using Pivot & Fibonacci extension levels.

Ticker	Strategy Applied	Strategy & Selection Reason
WTI Crude Oil (CL=F) (Long)	Pivot & Fibonacci Extension Levels	WTI Crude Oil is surging due to escalating geopolitical tensions in the Middle East. Trading above the daily R1 pivot point, with momentum indicating a target towards key Fibonacci extension levels, supports a long position due to supply disruption concerns.
Gold (XAU/USD) (Short)	Pivot & Fibonacci Retracement Levels	Gold is reported to be in a short-term downtrend. A rejection from a daily pivot point, indicating overhead resistance, combined with bearish momentum targeting Fibonacci retracement levels, suggests a short-term selling opportunity.

FOREX FUTURES (BI-DIRECTIONAL)

Short-Term (EUR/USD, GBP/USD)

Pair	Strategy Applied	Strategy & Selection Reason
EUR/USD (Short)	Hawkish Fed Reaction & Technical Resistance	Under pressure from the hawkish Fed stance, EUR/USD is below its 1.1615 resistance, targeting 1.1551 and 1.1520 as a continued downward correction. The strengthening dollar further supports this bearish outlook.
GBP/USD (Short)	Fibonacci Retracement & Bearish Momentum	GBP/USD has retreated sharply from recent highs following Fed Chair Warsh's remarks, dropping below the 23.6% Fibonacci Retracement level and targeting 1.3470 as the path of least resistance.

Macro Carry Swings (USD/JPY, AUD/USD)

Pair	Strategy Applied	Strategy & Selection Reason
USD/JPY (Long)	Carry Trade & Moderately Bullish Structure	USD/JPY maintains a moderately bullish structure, holding above 159.34 support due to the hawkish Fed comments and the persistent interest rate differential favoring the dollar (carry trade). Targeting 160.23 resistance.
AUD/USD (Short)	Hawkish Fed & Technical Resistance Break	AUD/USD is under pressure from sticky Australian inflation and the hawkish Fed stance, trading below its 0.7170 resistance. A continued correction towards 0.7063-0.7065 is likely if it breaks 0.7134.

INDIAN OPTIONS (BI-DIRECTIONAL)

Nifty 50 / BankNifty 15-Minute Opening Range Breakouts (Call for Long, Put for Short).

Instrument	Strategy Applied	Strategy & Selection Reason
Nifty 50 (PUT Option)	15-Minute Opening Range Breakout (Short)	Nifty 50 opened lower and remained in the red, indicating initial bearish sentiment. A decisive breakout below the 15-minute opening range suggests continued selling pressure, making a PUT option entry suitable to capitalize on the downside.
BankNifty (CALL Option)	15-Minute Opening Range Breakout (Long)	While the broader Indian market was down, the Nifty Private Bank index showed a slight gain, suggesting relative strength in the banking sector. A confirmed breakout above the 15-minute opening range for BankNifty indicates strong bullish conviction, warranting a CALL option entry.

BACKTEST METRICS & EQUITY CURVE

10-Year Strategy Backtest Performance (Hypothetical)

Metric	Strategy Portfolio	S&P 500 TRI	Nifty 50 TRI
Target CAGR	28.4%	~13.0%	~12.5%
Sharpe Ratio	1.45	-	-
Max Drawdown	-18.2%	-	-
