Current Session Highlight: New York Session Pre-Open Briefing (1 Hr Before Open)

Session News Focus: Wall Street pre-market movers, US Federal Reserve news, mega-cap US stocks (NVDA, MSFT, TSLA), and WTI Crude Oil catalysts.

SECTION 0: DAILY MACRO & FINANCIAL NEWS DIGEST

1. Global Macro & Central Banks

- **US Federal Reserve:** The Federal Reserve held the federal funds rate steady at 3.50%–3.75% after its July FOMC meeting, marking the fifth consecutive hold. However, internal divisions are deepening, with some officials prepared to raise rates if stubbornly high inflation persists, which has been above the 2% target for over five years. Fed Chair Kevin Warsh has initiated a sweeping review of the monetary policy framework, introducing "strategic ambiguity" in forward guidance, which could lead to increased market volatility. The market currently sees a 44% probability of a 25 basis point rate hike in September.
- **European Central Bank (ECB):** The ECB maintained its deposit facility rate at 2.25% in July, having begun precautionary rate hikes in June. The central bank conducted a geopolitical risk stress test on euro area banks, highlighting vulnerabilities to severe shocks. Further rate hikes are possible by year-end if Middle East conflicts persist.
- **Bank of England (BoE) & Bank of Japan (BoJ):** The BoE kept its Bank Rate at 3.75% in July, with widening internal policy divisions. The BoJ raised rates to 0.75% in December 2025 and continues gradual normalization.
- **Global Outlook:** The global economy faces a tug-of-war between technological innovation and headwinds from geopolitical tensions, trade fragmentation, and rising long-term interest rates. Central bank credibility and transparent communication are paramount in this environment.

2. US & European Markets

- **US Equities Pre-Open:** US stock futures are mixed this morning, with S&P 500 and Dow futures stable, while Nasdaq futures show a slight dip. This follows a strong close on Friday, driven by tech sector gains and renewed expectations of a Fed rate cut after weaker-than-expected jobs data. The S&P 500 recently touched an all-time high of 7793.68.
- **Mega-Cap Tech & AI:** Mega-cap technology stocks continue to show robust performance, largely fueled by the Artificial Intelligence (AI) boom.
  - **Nvidia (NVDA):** Shares are nearing all-time highs, propelled by strong earnings and increased capital expenditure plans from AI hyperscalers like Microsoft for fiscal year 2027. Nvidia's Q2 earnings report is due in late August, expected to be a major catalyst.
  - **Microsoft (MSFT):** Reported strong Q4 FY26 results, with CFO Amy Hood indicating increased capex for FY27 due to strong AI demand signals.
  - **Tesla (TSLA):** Showed strong revenue growth but negative free cash flow due to heavy spending on its Terafab project, a key concern for investors.
- **Semiconductors:** Mixed signals in the semiconductor sector. While Microchip Technology and Atlassian provided strong quarterly forecasts, Western Digital and SanDisk saw premarket declines despite positive outlooks, reflecting broader reassessments of AI-related valuations and sector-specific pressures. The White House has imposed tariffs on polysilicon to support domestic production, benefiting solar stocks.
- **European Markets:** European markets closed higher on Friday.

3. Indian Markets & Dalal Street

- **Market Open:** Indian equities are expected to open higher today, signaled by positive cues from GIFT Nifty futures.
- **Recent Performance:** Benchmarks snapped a two-day winning streak on Friday, with Sensex declining 456 points and Nifty falling 65 points, primarily due to rising crude oil prices.
- **FII/DII Flows & Earnings:** Renewed buying by Foreign Institutional Investors (FIIs), with inflows of USD 2.5 billion in July (the highest in 13 months), alongside continued Domestic Institutional Investor (DII) support, is improving market sentiment. Strong corporate earnings from select companies are also contributing to positive sentiment.
- **RBI Policy:** The Reserve Bank of India (RBI) plans to inject liquidity into the system by purchasing ₹1 Lakh Crore in bonds and executing a $10 Billion Forex Swap, potentially leading to lower interest rates. India's GDP is forecasted at 6.5% for FY26.

4. Commodities & Crypto Wire

- **WTI Crude Oil:** Oil prices are highly sensitive to Middle East geopolitics, particularly concerning the Strait of Hormuz. Optimism surrounding a potential peace deal between Iran and Oman has seen WTI crude fall from mid-$80s to the mid-$70s, despite Iran's denial of direct US talks and reiteration of conditions for reopening the waterway. OPEC+ is increasing output by 548,000 barrels per day in August, contributing to ongoing supply glut fears. Analysts' forecasts for year-end 2026 range around $60-$62 per barrel.
- **Gold (XAU/USD):** Gold prices remain highly sensitive to interest rate expectations and geopolitical developments. After hitting record highs near $5,600 in January, gold has corrected but is finding support around $4,000-$4,250. Robust central bank demand, driven by diversification away from the US dollar, continues to underpin the long-term investment case. Lower oil prices, by reducing inflation and easing rate hike expectations, are currently seen as supportive for gold.
- **Crypto Market:** Regulatory developments remain a key focus. Senator Lummis continues to push for the CLARITY Act to define digital asset regulation before the August recess, though its passage probability is low. Institutional interest is growing, with Bitcoin (BTC) trading around $64,630, showing cautious optimism. Ethereum (ETH) notably outperformed Bitcoin in July, climbing nearly 20%. The SEC's draft strategic plan for FY26-30 prioritizes digital asset regulation.
