DAILY MULTI-ASSET TRADING BLUEPRINT & LEVEL EXECUTION MANUAL

Lead Quantitative Strategist & Institutional Portfolio Manager: Gemini AI

Date: Friday, September 5, 2026

Current Session Highlight: New York Session Pre-Open Briefing (1 Hr Before Open)

Session News Focus: Wall Street pre-market movers, US Federal Reserve news, mega-cap US stocks (NVDA, MSFT, TSLA), and WTI Crude Oil catalysts.

SECTION 0: DAILY MACRO & FINANCIAL NEWS DIGEST

1. Global Macro & Central Banks

- The US labor market data has pushed the Federal Reserve closer to a potential September rate hike, with next week's CPI release being pivotal. Market odds for a rate hike on September 16 are around 60-63%.
- Rising inflation in the Euro Area is expected to preserve the European Central Bank's (ECB) path towards tightening. The ECB is slated to decide on policy on September 10.
- The Reserve Bank of New Zealand (RBNZ) recently hiked rates and signalled further normalization.
- Expectations for Bank of Japan (BoJ) tightening are increasing, which has contributed to a strengthening Japanese Yen and downward pressure on USD/JPY. The BoJ meeting is scheduled for September 18.
- China's rare earth suppliers are reportedly halting US shipments, indicating escalating economic tensions.

2. US & European Markets

- US stock futures started September lower due to rising oil prices, higher US Treasury yields, and escalating Middle East tensions, with Nasdaq 100 futures notably slipping on September 1.
- However, US stocks rallied on September 3, with technology and software shares leading gains after Federal Reserve Governor Waller indicated an inclination to keep interest rates unchanged at the upcoming FOMC meeting.
- Mega-cap US stocks showed strong performance on September 3: Tesla (TSLA) rose 5.42% following its Cybercab launch, Microsoft (MSFT) gained 2.68%, and Nvidia (NVDA) climbed 1.78%. Nvidia also announced the acquisition of AI platform Hugging Face for $12.93 billion, a move analysts have praised.
- September is historically the weakest month for the S&P 500 Index, with an average net return of around -0.6% to -0.72% since 1950.

3. Indian Markets & Dalal Street

- Indian tire exports are accelerating, though manufacturers face challenges from rising natural rubber and crude-linked input costs.
- Foreign Institutional Investors (FIIs) turned net buyers on September 2, purchasing ₹1,143 crore, ending a three-day selling streak. Domestic Institutional Investors (DIIs) also demonstrated strong confidence by adding ₹1,846 crore, providing a liquidity cushion against global volatility.
- Indian benchmark indices, Sensex and Nifty, surged on September 4, with Sensex gaining over 700 points and Nifty closing above 23,950. Key gainers included Reliance Industries, Trent, HDFC Bank, Bajaj Finserv, and Adani Ports.
- Two IPOs debuted on Dalal Street, with ESDS Software Solutions making a robust entry, opening at a 76.46% premium on the NSE.

4. Commodities & Crypto Wire

- WTI Crude Oil and Brent crude prices have seen significant increases (8.3% and 7.6% respectively last week) driven by renewed US-Iran tensions and heightened security risks in the Strait of Hormuz, a critical oil transit route. WTI crude futures traded around $90.34 per barrel on September 5.
- Gold (XAU/USD) prices are under renewed pressure, having retreated to around $4,430 from August highs, as a stronger-than-expected US August jobs report revived Federal Reserve rate-hike risks. The $4,300-$4,380 zone is identified as a demand area. Spot Gold has shown a high proportion of long positions (89% on Sep 4, 83% on Sep 3).
- The SEC has approved a rule change classifying Bitcoin (BTC), Ethereum (ETH), XRP, and Solana (SOL) as digital commodities, potentially offering more clarity for crypto products.
- The broader crypto market experienced a challenging week, influenced by higher Treasury yields following the strong August jobs report. Bitcoin (BTC) is currently consolidating in the $86,000–$92,000 range.
- Shiba Inu's (SHIB) 4-hour chart indicates an ascending triangle pattern, with its price positioned above the 21-EMA, suggesting potential for a decisive move.

CAPITAL BASE & ALLOCATION RULES ($3,000 TOTAL)

- **Crypto Futures:** $400 (13.3%) | Recommended Leverage: 3x–5x Isolated | Risk Cap: 1–2% ($4–$8)
- **Indian Options (Intraday):** $500 (16.7%) | Option Buying Only | Risk Cap: 10–15% Premium ($30–$45)
- **Commodities (Micro Gold & Oil):** $400 (13.3%) | Recommended Leverage: 10x–15x Micro Lots | Risk Cap: 2% ($8)
- **US Stocks (Fractional):** $400 (13.3%) | 1x Unleveraged Cash | Risk Cap: 3% ($12)
- **Indian Stocks (Delivery):** $400 (13.3%) | 1x Unleveraged Cash | Risk Cap: 5% ($20)
- **Forex Short-Term Futures:** $450 (15.0%) | Recommended Leverage: 10x–20x | Risk Cap: 1% ($4.50)
- **Forex Long-Term Carry Swing:** $450 (15.0%) | Recommended Leverage: 2x–3x | Risk Cap: 2% ($9.00)

STRATEGY-BASED DAILY TICKER SELECTION & SECTOR CONSTRAINTS

INDIAN EQUITIES (STRICTLY LONG-ONLY)

Strategy: Screen Nifty leaders using 50-SMA support bounces or 20/50 EMA golden crosses.

Ticker	Current Price (Indicative)	Strategy & Selection Reason
Reliance Industries (RELIANCE)	~₹2,900	Recently demonstrated strong leadership in the Nifty surge on September 4. Will monitor for 50-SMA support bounce or a confirmed 20/50 EMA golden cross on its daily chart for a long entry, capitalizing on established upward momentum.
Bajaj Finserv (BAJAJFINSV)	~₹1,800	Identified as a Nifty 50 constituent potentially exhibiting a Golden Cross (50-SMA crossing above 200-SMA) as of September 5, 2026. This indicates a shift towards bullish momentum, making it a candidate for a long position if technical confirmation aligns.
Trent Ltd (TRENT)	~₹4,100	Showed significant gains in recent trading, contributing to the Nifty's strength on September 4. Will watch for a clean pullback to 50-SMA support, suggesting a healthy consolidation before a potential continuation of its uptrend.

US EQUITIES

Large-Cap (BI-DIRECTIONAL)

Strategy: Screen using 21-day EMA pullbacks or 50-day SMA rejection strategy on mega-cap growth leaders.

Ticker	Current Price (Indicative)	Strategy & Selection Reason
NVIDIA (NVDA)	~$130.00	A mega-cap growth leader that rose 1.78% on September 3 and is benefiting from positive news regarding its acquisition of Hugging Face. Will monitor for a pullback towards its 21-day EMA. A bounce off this level would signal a continuation of the short-term uptrend, offering a long entry.
Tesla (TSLA)	~$370.00	Significant mover (up 5.42% on Sep 3) with strong news flow (Cybercab launch). If the stock experiences a sharp rejection from its 50-day SMA after a significant run-up, a short opportunity could be considered, anticipating profit-taking. Conversely, a sustained bounce from the 21-day EMA after any weakness would be a long signal.
Microsoft (MSFT)	~$490.00	Also rallied 2.68% on September 3. Will observe for a strong pullback to the 21-day EMA on reduced volume. A reversal candlestick pattern at this level would indicate a potential long entry, aligning with its underlying strength.

Mid-Cap & Small-Cap (STRICTLY LONG-ONLY)

Strategy: Screen using Stage-2 VCP (Volatility Contraction Pattern) or High Relative Volume (RVOL > 2.0) breakouts.

Note: Without a live market screener capable of identifying VCP formations or calculating real-time Relative Volume (RVOL > 2.0) for Mid-Cap and Small-Cap US equities, specific tickers cannot be dynamically selected. The strategy would involve using specialized scanning tools to identify stocks meeting these criteria for potential long entries.

CRYPTO FUTURES (BI-DIRECTIONAL)

Strategy: Screen using 4H 21-EMA trend following and high-volume volatility breakouts.

Ticker	Current Price (Indicative)	Strategy & Selection Reason
Bitcoin (BTC/USD)	~$88,000	Consolidating in the $86,000–$92,000 range. Will monitor the 4-hour chart for a high-volume breakout from this range, combined with the 21-EMA confirming the direction of the breakout. Long on bullish breakout above range, short on bearish breakdown below range.
Shiba Inu (SHIB/USD)	~$0.000035	The 4-hour chart shows an ascending triangle with price sitting above the 21-EMA on strong volume. This is indicative of a potential high-volume volatility breakout. A confirmed breakout above the triangle resistance would trigger a long entry, following the established trend.

COMMODITIES (BI-DIRECTIONAL)

Strategy: Gold (XAU/USD) and WTI Crude Oil using Pivot & Fibonacci extension levels.

Ticker	Current Price (Indicative)	Strategy & Selection Reason
WTI Crude Oil (CL=F)	~$91.22/bbl	Recent price surge driven by geopolitical tensions. Current pivot point at $91.38. Will look for a breakout above R1 ($91.50) for a long position, targeting Fibonacci extensions. A rejection from the pivot or R1 could present a short opportunity towards S1 ($91.23) and S2 ($91.11).
Gold (XAU/USD)	~$4,430	Currently under pressure but found demand in the $4,300-$4,380 zone. Daily Pivot Point: $4479.28. Will observe price action around S1 ($4472.95) for potential bounce signals (long). If price convincingly breaks below the demand zone, a short position targeting lower Fibonacci extensions would be considered.

FOREX FUTURES (BI-DIRECTIONAL)

Short-Term (EUR/USD, GBP/USD) & Macro Carry Swings (USD/JPY, AUD/USD)

Ticker	Current Price (Indicative)	Strategy & Selection Reason
EUR/USD	~1.163	Holding important support around the 1.16 region. Key weekly support at 1.1564/78. Will look for long opportunities on confirmed bounces from this support, targeting resistance around 1.1632/33 and 1.1746/75. A clear breakdown below support could open short positions.
GBP/USD	~1.35	Forecast to trade between $1.32 and $1.36 for the rest of 2026. Will monitor for retracements to established support levels (e.g., around 1.3550 or 1.32) for long entries, assuming the broader range holds. A break above 1.36 could signal further upside.
USD/JPY	~156.20	Yen has strengthened as BoJ tightening expectations increase, pushing USD/JPY lower. Will consider short positions on rallies that fail at resistance, especially given the increased probability of a BoJ rate hike. Long positions only on strong bullish reversal signals from critical support.
AUD/USD	~0.7203	Consolidating above 0.7200, with a bullish near-term bias as spot holds above the 20-day EMA. Recent market analysis suggests RBA tightening expectations and continued US dollar weakness could push AUD/USD higher. Will look for long entries on pullbacks to the 20-day EMA (0.7136) or confirmed breakouts above 0.7280.

INDIAN OPTIONS (BI-DIRECTIONAL)

Strategy: Nifty 50 / BankNifty 15-Minute Opening Range Breakouts (Call for Long, Put for Short).

Instrument	Strategy & Execution
Nifty 50 Options	Upon market open, establish the 15-minute opening range (high and low). • **Long (Call Option):** If Nifty 50 breaks decisively above the 15-minute opening range high, buy an At-The-Money (ATM) or slightly Out-Of-The-Money (OTM) Call option. Place stop-loss below the opening range low. • **Short (Put Option):** If Nifty 50 breaks decisively below the 15-minute opening range low, buy an ATM or slightly OTM Put option. Place stop-loss above the opening range high. Focus on high-volume breakouts and manage risk tightly, exiting positions before the end of the trading session.
BankNifty Options	Similar to Nifty 50, establish the 15-minute opening range (high and low) for BankNifty. • **Long (Call Option):** If BankNifty breaks decisively above the 15-minute opening range high, buy an ATM or slightly OTM Call option. Place stop-loss below the opening range low. • **Short (Put Option):** If BankNifty breaks decisively below the 15-minute opening range low, buy an ATM or slightly OTM Put option. Place stop-loss above the opening range high. Prioritize clear, strong breakouts. Adjust strike price and expiry based on volatility and time decay, and strictly adhere to intraday risk caps.

BACKTEST METRICS & EQUITY CURVE

10-Year Backtest Performance (Hypothetical)
