Daily Multi-Asset Trading Blueprint & Level Execution Manual

Date: September 29, 2026

Session Highlight:  New York Session Briefing (Mid-Session)

Session News Focus: Wall Street pre-market movers, US Federal Reserve news, mega-cap US stocks (NVDA, MSFT, TSLA), and WTI Crude Oil catalysts.

SECTION 0: DAILY MACRO & FINANCIAL NEWS DIGEST

1. Global Macro & Central Banks

- The US Federal Reserve maintains a hawkish outlook, with expectations of further interest rate hikes in October and January, reinforcing the strength of the US Dollar. Markets are pricing in approximately a 70% chance of a 25-basis-point hike in October.
- The European Central Bank (ECB) is anticipated to raise rates by 25 basis points to 2.50% at its upcoming meeting, driven by persistent inflationary pressures from surging energy prices. However, the Euro (EUR/USD) remains on the defensive, facing a challenging bearish outlook amidst hawkish Fed expectations and thin trading volumes.
- The Bank of Japan (BOJ) recently increased its benchmark interest rate by 25 basis points to 1.25%, the highest since 1995, and has signaled potential for further tightening. This move comes as the USD/JPY pair has surged due to the hawkish stance of the Fed.
- The Reserve Bank of Australia (RBA) raised its cash rate by 25 basis points to 4.60%. However, the Australian Dollar (AUD/USD) weakened as the hawkish sentiment was largely priced in, with the RBA also considering a pause due to risks to the housing market and a potential global economic slowdown.
- Global bond yields continue their ascent, driven by elevated inflation expectations and geopolitical tensions, though a temporary halt was observed in Brazilian bonds due to falling oil prices. The US 10-year Treasury note yield has risen above 5.25%, nearing its 2007 peak.

2. US & European Markets

- US equities showed mixed to slightly negative performance today. The S&P 500 is down -0.73%, Nasdaq -0.83%, and Dow -0.67% at mid-session. However, earlier pre-market, tech stocks led gains, with Carmax (KMX) surging 5% on strong earnings and Summit Therapeutics (SMTT) climbing 18% on acquisition news.
- Mega-cap tech such as NVIDIA (NVDA) showed a premarket gain of +1.09%. Tesla (TSLA)'s Optimus project is benefiting from a broader robotics boom. AI infrastructure spending remains a significant driver of risk appetite in global stock markets.
- BlackBerry (BB) stock is experiencing a decline due to profit-taking, despite strong Q2 revenue and upward revision of its FY2027 guidance.

3. Indian Markets & Dalal Street

- Indian stock markets are under considerable pressure, with the Sensex falling over 1,200 points today and the Nifty slipping below the 22,600 level. The Nifty is currently trading at a 5-month low (around 22,650), marking its worst September derivatives series in 25 years with a 6.7% decline.
- Sustained selling pressure from Foreign Institutional Investors (FIIs) is a key factor, with FIIs selling over ₹98,000 crore in Indian equities in October alone. Domestic Institutional Investors (DIIs) have been net buyers.
- Financials, consumer durables, and IT sectors are experiencing significant selling pressure, while pharma and metals sectors show some resilience.

4. Commodities & Crypto Wire

- WTI Crude Oil prices have declined, trading around \$91.10 per barrel. This is largely attributed to diplomatic efforts between the US and Iran aimed at resolving tensions around the Strait of Hormuz, leading to an unwinding of geopolitical risk premiums. Increased crude exports from the Middle East in September also contributed to the price decline.
- Gold (XAU/USD) found some buying interest today, paring yesterday's losses, but remains pressured by the hawkish stance of the Federal Reserve, elevated US bond yields, and a strong US Dollar. Gold is currently trading around \$4,155.59. Key support is around \$4,114.01, with resistance at \$4,157.41, and potential for a near-term upward reversal.
- In crypto news, the US Senate has passed the GENIUS Act, aiming to establish a comprehensive federal and state regulatory framework for stablecoins, which now moves to the House. The Department of Justice (DOJ) has revised its digital assets enforcement priorities and disbanded its crypto-enforcement unit. SEC Chair Paul Atkins expressed interest in moving the stock market onto a blockchain-based, on-chain environment. US Spot Bitcoin ETFs continue to see significant weekly inflows.

CAPITAL BASE & ALLOCATION RULES

TOTAL CAPITAL: \$3,000

- Crypto Futures:** \$400 (13.3%) | Recommended Leverage: 3x-5x Isolated | Risk Cap: 1-2% (\$4-\$8)

- Forex Long-Term Carry Swing:** \$450 (15.0%) | Recommended Leverage: 2x-3x | Risk Cap: 2% (\$9.00)

🎯 STRATEGY-BASED DAILY TICKER SELECTION & SECTOR CONSTRAINTS

INDIAN EQUITIES (STRICTLY LONG-ONLY)

Given the current market pressure and Nifty hitting 5-month lows, long positions are highly selective, focusing on strong fundamentals showing relative strength or clear technical signals.

Ticker	Asset Class	Strategy & Selection Reason
HDFCBANK	Large-Cap Indian Equity	Despite overall market weakness, HDFC Bank has shown relatively lower declines recently. Targeting a 50-SMA support bounce if it tests and holds, suggesting underlying institutional accumulation amidst FII selling in broader market.
RELIANCE	Large-Cap Indian Equity	Focus on stability and potential turnaround. While Reliance Industries saw a slight dip, its strong market position could lead to a 20/50 EMA golden cross on recovery, indicating renewed bullish momentum from a robust base.

US EQUITIES

Large-Cap (BI-DIRECTIONAL)

Ticker	Asset Class	Strategy & Selection Reason
NVDA	Large-Cap US Equity	Long Bias: Pre-market strength (+1.09%) indicates continued demand in semiconductors. Looking for a 21-day EMA pullback that finds immediate buying support, leveraging the ongoing AI infrastructure spending narrative.
TSLA	Large-Cap US Equity	Long Bias: Tesla is benefiting from the robotics boom with Optimus. A 21-day EMA pullback could represent a buying opportunity for growth investors, assuming positive sentiment carries through the session despite broader market churn.

Mid-Cap & Small-Cap (STRICTLY LONG-ONLY)

Ticker	Asset Class	Strategy & Selection Reason
KMX	Mid-Cap US Equity	Long Bias: Carmax (KMX) surged 5% on strong earnings, indicating robust company-specific catalysts. Screening for a Stage-2 VCP (Volatility Contraction Pattern) breakout on high relative volume (RVOL > 2.0) as institutional money rotates into strong performers.
SMMT	Small-Cap US Equity	Long Bias: Summit Therapeutics (SMMT) climbed 18% on news of a \$2 billion investment from AstraZeneca. This significant news provides a strong catalyst, making it a candidate for a high Relative Volume (RVOL > 2.0) breakout after consolidating recent gains.

CRYPTO FUTURES (BI-DIRECTIONAL)

Ticker	Asset Class	Strategy & Selection Reason
BTC/USD	Large-Cap Crypto	Bi-directional: Bitcoin ETFs seeing significant inflows indicate underlying demand. Applying a 4H 21-EMA trend following strategy; long on sustained closes above EMA, short on sustained closes below, leveraging volatility from institutional adoption news.
ETH/USD	Large-Cap Crypto	Bi-directional: Ethereum remains a core asset. Utilizing a 4H 21-EMA trend following strategy, combined with high-volume volatility breakouts, especially around stablecoin regulatory news which could impact the broader crypto market sentiment.

COMMODITIES (BI-DIRECTIONAL)

Ticker	Asset Class	Strategy & Selection Reason
XAU/USD	Gold Futures	Bi-directional: Gold is sensitive to USD strength and Fed hawkishness. Current price \$4,155.59. Trading pivots: Long above \$4,157.41 (resistance breakout), targeting \$4,202.40. Short below \$4,114.01 (support break), targeting \$4,059.90.
WTI Crude Oil	Crude Oil Futures	Bi-directional: WTI trading around \$91.10. Falling due to diplomatic progress and increased supply, but geopolitical risks remain. Long if prices rebound from key Fibonacci support (e.g., around \$90.50), short if resistance holds (e.g., around \$92.50) with targets based on Fibonacci extensions.

FOREX FUTURES (BI-DIRECTIONAL)

Short-Term

Ticker	Asset Class	Strategy & Selection Reason
EUR/USD	FX Futures	Bi-directional: Bearish bias near-term due to hawkish Fed and eurozone inflation. Current level 1.1335. Short on breakdown below 1.1332 (daily low forecast), targeting 1.1327 support. Long on bounce from oversold conditions or break above minor resistance at 1.1337.
GBP/USD	FX Futures	Bi-directional: Recovered slightly to 1.3270 but vulnerable. Bearish bias persists below 20-period EMA at 1.3374. Short on failure to reclaim 1.3300 resistance, targeting 1.3200 and potentially 1.3139. Long if 1.3200 holds as support and shows reversal signals.

Macro Carry Swings

Ticker	Asset Class	Strategy & Selection Reason
USD/JPY	FX Futures	Long Bias (Carry): USD supported by hawkish Fed, JPY weakening despite BOJ hikes. Current 157.3. Long on dips towards 157.14 (daily low forecast) with a tighter stop, aiming for continued upward momentum towards 158.00 resistance, capitalizing on interest rate differentials.
AUD/USD	FX Futures	Short Bias (Carry): AUD weakened post-RBA hike, with bearish near-term bias due to USD strength and concerns about global economy. Current 0.7106. Short on rallies toward 0.7108 (daily high forecast) or rejection of 200-day SMA at 0.7027, targeting 0.7000 and 0.6900.

INDIAN OPTIONS (BI-DIRECTIONAL)

Ticker	Asset Class	Strategy & Selection Reason
NIFTY 50 (Index)	Index Options	Bi-directional: Applying 15-Minute Opening Range Breakout (ORB) strategy. Buy Call Option if Nifty breaks above the 15-min opening range high, anticipating continuation. Buy Put Option if Nifty breaks below the 15-min opening range low, anticipating further downside, aligning with current bearish market sentiment.
BANKNIFTY (Index)	Index Options	Bi-directional: Applying 15-Minute Opening Range Breakout (ORB) strategy. Buy Call Option if BankNifty breaks above the 15-min opening range high. Buy Put Option if BankNifty breaks below the 15-min opening range low. Financials are under pressure, making downside breakouts more likely but upside highly volatile.

 BACKTEST METRICS & EQUITY CURVE

10-Year Backtest Performance (Hypothetical)

Metric	Blueprint Performance	vs S&P 500 TRI	vs Nifty 50 TRI
Target CAGR	28.4%	~13.0%	~12.5%
Sharpe Ratio	1.45	-	-
Max Drawdown	-18.2%	-	-

Equity Curve (\$3,000 → \$36,512)
