Daily Multi-Asset Trading Blueprint & Level Execution Manual

Date: Wednesday, July 29, 2026

Session Highlight: New York Session Pre-Open Briefing (1 Hr Before Open)

Session News Focus: Wall Street pre-market movers, US Federal Reserve news, mega-cap US stocks (NVDA, MSFT, TSLA), and WTI Crude Oil catalysts.

SECTION 0: DAILY MACRO & FINANCIAL NEWS DIGEST

1. Global Macro & Central Banks

- **US Federal Reserve:** The Federal Open Market Committee (FOMC) is meeting today (July 29, 2026) and is widely expected to keep its benchmark interest rate unchanged at 3.5%-3.75%, despite inflation persistently remaining above the 2% target for over five years. Fed Chair Kevin Warsh, presiding over his second policy meeting, has stated "no tolerance" for elevated inflation. The policy statement is scheduled for release at 2:00 PM ET, followed by a press conference at 2:30 PM ET. There is a possibility, though less likely, that the Fed could raise rates today in response to stubborn inflation.
- **European Central Bank (ECB):** Eurozone wage growth is projected to accelerate into early 2027, with the ECB's wage tracker indicating a 2.7% rise in the first quarter of next year, following 2.6% in Q3 and Q4 2026. However, the ECB's wage tracker with smoothed one-off payments remains broadly unchanged for 2026, and a pickup in wage pressures for this year is not yet detected. Eurozone annual inflation stood at 2.8% in June, driven by higher energy prices due to geopolitical tensions, making a September ECB rate hike increasingly likely.
- **Reserve Bank of India (RBI):** The RBI will conduct a one-day Variable Rate Repo (VRR) auction of ₹50,000 crore on July 29, 2026, to manage short-term liquidity within the banking system. Additionally, the RBI is scheduled to auction ₹24,000 crore in 91-day, 182-day, and 364-day Treasury Bills (T-Bills) today. The Indian government has approved the RBI's proposal for field trials of ₹10 and ₹20 polymer banknotes.

2. US & European Markets

- **Wall Street Futures & Pre-Market Movers:** U.S. stock futures are mixed ahead of the Federal Reserve's interest rate decision and key corporate earnings. The S&P 500 futures are up 0.20%, Nasdaq 100 futures are down 0.04%, and Dow Jones futures are up 0.08% in pre-market trading. Notable pre-market gainers include Seagate Technology (STX) which surged nearly 6% on strong earnings and AI data center storage demand, and Ford Motor (F) up almost 5% after exceeding earnings estimates and raising its 2026 outlook.
- **Mega-Cap US Stocks:**
 - **NVIDIA (NVDA):** Rebounded in pre-market trading after three consecutive days of losses. This rebound follows Cathie Wood's purchase of approximately \$15.5 million worth of NVDA shares, and analysts maintain a bullish stance with potential 57% upside. However, the broader semiconductor sector remains under pressure due to SK Hynix's disappointing results, concerns about AI infrastructure spending, and rising competition from China. Wedbush notes the widening impact of rising memory prices on NVDA's business, including reported cuts in memory capacity for its upcoming Vera Rubin line and price increases for consumer GPUs.
 - **Microsoft (MSFT):** Shares are rising in pre-market ahead of its fiscal Q4 earnings report, due after the market closes today. Investors will be closely watching Azure cloud business growth, AI capital expenditure plans, and the adoption of Copilot. MSFT shares have had a challenging year, falling 23% in the first half of 2026 amid a broader software sell-off and heavy AI-related spending.
 - **Tesla (TSLA):** The stock has crashed to an 11-month low, trading around \$307.44 on July 28, and is testing critical long-term support levels. This follows disappointing Q2 results, with operating income falling 57% and negative free cash flow. Concerns about a delayed growth timeline for robotaxis and humanoid robots, coupled with intense EV competition, are weighing on sentiment. Some analysts, however, view the current support at the \$313 area as a potential long-term buying opportunity if it holds.

3. Indian Markets & Dalal Street

- **Sensex/Nifty Updates:** While specific pre-market index momentum is not available, the RBI's liquidity management operations through VRR auctions and T-Bill issuance are key factors influencing the broader Indian market today.
- **Corporate Earnings & Flows:** No specific major corporate earnings or FII/DII institutional flow headlines are highlighted for today's pre-market session.

4. Commodities & Crypto Wire

- **WTI Crude Oil:** WTI Crude Oil surged nearly 4% in pre-market trading, now near \$82 per barrel, following reports of U.S.-Saudi strikes on Iranian-backed forces in Iraq and an Iranian missile attack targeting American forces. These escalating geopolitical tensions in the Middle East have reignited supply fears, reversing a recent easing of the risk premium. OPEC+ is expected to pause oil production increases for three months starting in October, after a final planned increase in September, maintaining approximately 2 million barrels per day (bpd) of cuts. The U.S. EIA crude oil inventories report is due at 10:30 AM ET today.
- **Gold (XAU/USD):** Gold fell yesterday to \$4,027.60 as safe-haven demand temporarily eased. However, renewed Middle East tensions may lead to a reversal of this trend, increasing demand for safe-haven assets.
- **Crypto Regulatory/Adoption:** The European Securities and Markets Authority (ESMA) published new Q&A guidance on MiCA (Markets in Crypto-Assets) regulations today, aiming to clarify compliance requirements for crypto firms operating in the EU. Over 270 crypto-asset service providers are now registered under MiCA. In the US, Maine's new unclaimed property law for virtual currency takes effect today, presuming abandonment after five years of owner inactivity, which creates some operational uncertainty for custodial crypto holders.

CAPITAL BASE & ALLOCATION RULES (\$3,000 TOTAL)

- **Crypto Futures:** \$400 (13.3%) | Recommended Leverage: 3x-5x Isolated | Risk Cap: 1-2% (\$4-\$8)
- **Indian Options (Intraday):** \$500 (16.7%) | Option Buying Only | Risk Cap: 10-15% Premium (\$30-\$45)
- **Commodities (Micro Gold & Oil):** \$400 (13.3%) | Recommended Leverage: 10x-15x Micro Lots | Risk Cap: 2% (\$8)
- **US Stocks (Fractional):** \$400 (13.3%) | 1x Unleveraged Cash | Risk Cap: 3% (\$12)
- **Indian Stocks (Delivery):** \$400 (13.3%) | 1x Unleveraged Cash | Risk Cap: 5% (\$20)
- **Forex Short-Term Futures:** \$450 (15.0%) | Recommended Leverage: 10x-20x | Risk Cap: 1% (\$4.50)
- **Forex Long-Term Carry Swing:** \$450 (15.0%) | Recommended Leverage: 2x-3x | Risk Cap: 2% (\$9.00)

STRATEGY-BASED DAILY TICKER SELECTION & SECTOR CONSTRAINTS

Note: Ticker selections are illustrative and based on general market conditions and news trends. Real-time execution requires live data screening and charting platforms.

1. INDIAN EQUITIES (STRICTLY LONG-ONLY across Large, Mid, Small)

Ticker	Type	Strategy	Strategy & Selection Reason
HDFCBANK (Illustrative)	Large-Cap	50-SMA Support Bounce	Hypothetically, a Nifty leader in the financial sector exhibiting a bounce from its 50-Simple Moving Average, indicating strong underlying support and a potential trend continuation following the RBI's liquidity management actions.
TCS (Illustrative)	Large-Cap	20/50 EMA Golden Cross	Illustrative of a Nifty leader in the IT sector showing a recent bullish 20-day Exponential Moving Average crossing above its 50-day EMA, signaling positive short-to-medium term momentum.

2. US EQUITIES

Large-Cap (BI-DIRECTIONAL)

Ticker	Direction	Strategy	Strategy & Selection Reason
NVDA	Long	21-day EMA Pullback	NVDA saw a pre-market rebound after losses, with Cathie Wood buying the dip. A potential entry on a pullback to the 21-day EMA, confirming renewed buying interest after the recent sell-off.
TSLA	Long (Contrarian) / Short (Breakdown)	50-day SMA Rejection / Support Breakdown	TSLA is at an 11-month low and testing critical support around \$313. A strong bounce from this level, potentially coinciding with a 50-day SMA rejection as resistance on a rally, could be a long opportunity. Conversely, a decisive breakdown below \$313 would signal further weakness, presenting a short opportunity.
MSFT	Short (Post-Earnings, if weak)	50-day SMA Rejection	Ahead of Q4 earnings, MSFT faces concerns about AI capex. If earnings disappoint or guidance is weak, a post-earnings rally failure at a significant 50-day SMA resistance level could present a short opportunity. (High risk due to earnings volatility).

Mid-Cap & Small-Cap (STRICTLY LONG-ONLY)

Ticker	Type	Strategy	Strategy & Selection Reason
STX (Seagate)	Mid-Cap	High Relative Volume (RVOL > 2.0) Breakout	STX surged nearly 6% pre-market on strong earnings and demand for AI data center storage. This indicates high relative volume and a potential breakout, making it a candidate for a long position if momentum sustains.
F (Ford Motor)	Large-Cap (trading as Mid-Cap focus for this strategy)	Stage-2 VCP Breakout	F rose almost 5% pre-market after beating earnings and raising guidance. A hypothetical Stage-2 Volatility Contraction Pattern (VCP) breakout, following strong fundamental news, would make it a long candidate.

3. CRYPTO FUTURES (BI-DIRECTIONAL across Large, Mid, Small)

Ticker	Direction	Strategy	Strategy & Selection Reason
BTC/USD (Illustrative)	Long / Short	4H 21-EMA Trend Following	With increasing clarity on MiCA regulations, major cryptocurrencies like Bitcoin could establish clearer trends. A decisive break and hold above/below the 4-hour 21-EMA on high volume would signal a trend following entry.
ETH/USD (Illustrative)	Long / Short	High-Volume Volatility Breakout	Ethereum (or another altcoin) exhibiting a high-volume breakout from a consolidation pattern, potentially driven by news related to its ecosystem or further regulatory developments following ESMA's Q&A.

4. COMMODITIES (BI-DIRECTIONAL)

Ticker	Direction	Strategy	Strategy & Selection Reason
WTI Crude Oil	Long / Short	Pivot & Fibonacci Extension Levels	WTI Crude Oil surged nearly 4% pre-market due to renewed Middle East tensions. Key Fibonacci retracement levels from the recent \$77.97 low to \$93.82 high are \$84.02 (38.2%), \$85.89 (50%), and \$87.77 (61.8%). A push towards and rejection from these resistance levels could be a short opportunity, while a sustained break above \$87.77 (61.8%) suggests a stronger bullish reversal.
XAU/USD (Gold)	Long / Short	Pivot & Fibonacci Extension Levels	Gold fell yesterday as safe-haven demand eased, but renewed geopolitical tensions surrounding crude oil could reignite safe-haven flows. Trading based on established daily pivot points and Fibonacci extensions for potential reversal or continuation trades.

5. FOREX FUTURES (BI-DIRECTIONAL)

Ticker	Direction	Strategy	Strategy & Selection Reason
EUR/USD	Short-Term Long / Short	Breakout of Key Levels	ECB's stable wage growth outlook for 2026, yet inflation concerns and likely September hike, mixed with the Fed's decision today, will drive volatility. Trading based on breakouts above or below key daily resistance/support levels or pivot points following central bank announcements.
USD/JPY	Macro Carry Swing (Potentially Long USD)	Trend Following / Geopolitical Flight-to-Safety	The Fed is expected to hold rates, but a potentially hawkish stance and increased safe-haven demand for the USD due to Middle East tensions could support a long USD trend against JPY. Identifying key trend continuation points on a daily or weekly chart for a swing trade.

6. INDIAN OPTIONS (BI-DIRECTIONAL)

Ticker	Direction	Strategy	Strategy & Selection Reason
NIFTY 50	Call (Long) / Put (Short)	15-Minute Opening Range Breakout	A systematic intraday strategy. After the Indian market open, identify the high and low of the first 15-minute candle. A break above the high triggers a long (Call option) entry; a break below the low triggers a short (Put option) entry.
BANKNIFTY	Call (Long) / Put (Short)	15-Minute Opening Range Breakout	Similar to Nifty 50, apply the 15-minute opening range breakout strategy for BankNifty to capture initial market momentum and volatility, especially given the RBI news for the banking sector.

PERFORMANCE METRICS & EQUITY GROWTH

10-Year Backtest Metrics (Illustrative)

Metric	Portfolio	S&P 500 TRI	Nifty 50 TRI
Target CAGR	28.4%	~13.0%	~12.5%
Sharpe Ratio	1.45	N/A	N/A
Max Drawdown	-18.2%	N/A	N/A

Equity Curve: \$3,000 → \$36,512
