📰 SECTION 0: DAILY MACRO & FINANCIAL NEWS DIGEST

1. Global Macro & Central Banks

- ****US Inflation & Fed Outlook:**** Year-ahead inflation expectations in the United States, as measured by the University of Michigan Surveys of Consumers, were confirmed at 4.6% in September 2026, marking the highest since June. The five-year inflation outlook stood at 3.4%. The August Consumer Price Index (CPI) report showed prices rose 0.4% seasonally adjusted for the month and 3.4% year-over-year. Despite Bitcoin's surge, the Federal Reserve hiked rates. The median FOMC participant projects 3.4% core PCE inflation over 2026, with a return to the long-run inflation target of 2% by 2029. The federal funds rate is projected at 4.1% for year-end 2026 and 2027.
- ****ECB Policy & Inflation Concerns:**** The European Central Bank (ECB) recently raised interest rates in September, with economists not ruling out another hike by year-end. ECB Vice President Boris Vujcic warned that elevated diesel prices, driven by shrinking global refining capacity and geopolitical conflicts, threaten to fuel broader inflation across the Eurozone, complicating the ECB's efforts to control price growth. The ECB has also begun preparatory work to invest in tokenised securities to gain DLT experience.
- ****RBI & Indian Economy:**** The Reserve Bank of India (RBI) stated that the Indian economy is performing well despite global headwinds, but flagged geopolitical tensions and weather risks as key challenges. High-frequency data up to September 21 indicated a broad-based sequential rise in food prices, including rice, wheat, pulses, and edible oils. FDI inflows strengthened in July, reaching their highest monthly level in five years, and India's forex reserves climbed to USD 765.9 billion as of September 18, 2026.

2. US & European Markets

- ****Wall Street Futures & Tech Momentum:**** US stock futures are showing mixed signals in pre-market, with investors digesting recent inflation data and Fed commentary. The Nasdaq Composite has gained 16.46% year-to-date, driven largely by AI-related investments.
- ****Mega-Cap Tech Movers:****
 - ****Tesla (TSLA):**** Tesla officially began high-volume production of its Semi electric trucks at its Nevada factory, nearly nine years after unveiling the truck. Despite this, Tesla shares fell 1.54% after the announcement, also impacted by an analyst target cut and a European regulatory delay concerning its Full Self-Driving (FSD) system. Tesla received a significant order for 2,500 Semi trucks from an alliance of shippers, including Microsoft and PepsiCo. Elon Musk teased a new Roadster reveal for October 1.
 - ****Microsoft (MSFT):**** Microsoft stock closed up 3.66% yesterday, driven by strong quarterly results, with total sales up 18% and net profit rising 31%. Azure cloud services showed significant growth (43% increase), surpassing \$100 billion in revenue for the full year. Microsoft is also reportedly rebuilding its consumer Copilot around its workplace assistant, ceding the personal chatbot race to competitors. The company is quietly dropping the "Copilot+" branding from its new laptops.
 - ****Nvidia (NVDA):**** Nvidia continues to be a key player in the semiconductor and AI space, with significant investments from the US government and Nvidia supporting Intel's foundry business. The broader semiconductor industry is seeing increased demand due to AI.
- ****Semiconductor Developments:**** The Ministry of Economic Affairs approved TSMC's applications to invest US\$44 billion in the US since December 2020 as it pursues a US\$265 billion investment plan in Arizona. India's Finance Minister Nirmala Sitharaman also called for significant investment in AI infrastructure, semiconductor manufacturing, and quantum technology, positioning these as critical for India's future economic growth.

3. Indian Markets & Dalal Street

- ****Sensex/Nifty Updates:**** Indian benchmark indices, Sensex and Nifty, ended lower for the seventh consecutive week, the longest losing streak since the COVID-19 pandemic. Nifty 50 fell by about 0.88%, and Sensex dropped by 0.54% for the week. However, both indices rebounded on Friday due to value buying in banking, oil & gas, and auto shares, recovering from Thursday's sharp sell-off. The Nifty closed at 23,140.50, with 23,000 as an important support zone and 23,200 as near-term resistance.
- ****FII/DII Institutional Flows:**** Foreign institutional investors (FIIs) remained net sellers for the sixth consecutive week, offloading ₹11,490 crore in equities during the week of September 21-25. For the month of September until the 25th, FIIs have sold around ₹18,531 crore. In contrast, domestic institutional investors (DIIs) were net buyers of ₹16,398 crore for the week and ₹52,617 crore for the month, providing a cushion against foreign selling pressure.
- ****Sectoral Momentum:**** The market witnessed broad-based selling in the week, with Bank Nifty declining 1.4%, and Nifty Midcap and Smallcap indices falling 2.1% and 0.9%, respectively. Financial services bore the brunt of a sell-off earlier in the week due to a proposed insurance regulatory shake-up. Consumer Durables, Auto, Realty, Power, Industrials, and Utilities sectors saw gains on Friday.
- ****Upcoming Bank Strike:**** Top trade unions representing RBI employees and workers have supported a three-day nationwide bank strike from September 28-30, pressing for demands including a five-day working week. The RBI has permitted public sector and regional rural banks to function on Sunday, September 27, to mitigate inconvenience.

4. Commodities & Crypto Wire

- ****Crude Oil Geopolitics:**** Brent crude oil prices had crossed \$106 a barrel earlier in the week, and were around \$105.4 per barrel on Friday, driven by the escalating West Asia conflict and disruptions in the Strait of Hormuz. Concerns about diesel prices remaining elevated due to shrinking global refining capacity and geopolitical tensions are fueling inflation fears. Investors will closely watch whether crude prices ease further.
- ****Gold Supply/Demand:**** Gold prices are influenced by global macro factors, including inflation concerns and central bank policies.

- **Major Crypto Headlines:**
 - **Market Overview:** The global crypto market capitalization stood at \$2.98 trillion, up 0.3% over 24 hours (as of September 26, 2026, 1:30 AM UTC). Bitcoin's dominance is strong at 56.5%, while Ethereum holds 11%. The Crypto Fear and Greed Index is at 74 ("Greed"), up from 71 yesterday.  - **Bitcoin (BTC):** Bitcoin's price was \$84,030.08 on Saturday, up 0.30%, with US spot Bitcoin ETFs seeing net inflows of \$2.39 billion this week. Some analysts believe Bitcoin's recent rally to \$86,000 was due to seller exhaustion and improving liquidity conditions, as well as its appeal as protection against government debt.
 - **Ethereum (ETH):** Ethereum's price dipped slightly today. Prediction markets are pricing a 69% chance that Ethereum touches \$3,000 by year-end, with it trading around \$2,689 on Saturday morning. Bitmine Immersion Technologies is close to owning 5% of all Ethereum in circulation and hinted at a new long-term target.
 - **XRP:** Ripple is set to unlock 1 billion XRP (worth approximately \$1.5 billion at current prices) from its escrow accounts on October 1. XRP whale accumulation has been observed ahead of this scheduled unlock.
