Session Highlight: London Session Pre-Open Briefing (1 Hr Before Open)

Session News Focus: European macroeconomic releases, ECB/BOE news, Forex short-term futures (EUR/USD, GBP/USD), and Gold (XAU/USD) supply/demand zones.

SECTION 0: DAILY MACRO & FINANCIAL NEWS DIGEST

1. Global Macro & Central Banks

- **US Federal Reserve:** Fed Chair Kevin Warsh's hawkish comments at Jackson Hole have increased expectations for further interest rate hikes, with markets now pricing in a 64.4% chance of a 25 basis point hike in September. Focus remains on upcoming nonfarm payrolls data for further clarity on the labor market and inflation trajectory.
- **European Central Bank (ECB):** The ECB is widely expected to raise interest rates by 0.25 percentage points at its upcoming September 10th meeting. Eurozone inflation is projected to rise to 3.0% in August, with core inflation at 2.6%, driven largely by elevated energy prices. ECB policymaker Olli Rehn warned that the Iran war could keep inflation elevated in the Eurozone.
- **Bank of England (BOE):** The BOE maintained its Bank Rate at 3.75% in July, with its next decision due on September 17th. Inflation has fallen to 2.6% but is anticipated to rise later in the year due to higher energy costs. Markets are pricing in approximately a 60% chance of a 25 basis point hike at the next BOE meeting. Governor Andrew Bailey also cautioned about the risks posed by advanced AI models to global financial stability.
- **Global Bond Markets:** A deepening global bond rout is observed, with Japan's 10-year yield hitting 3% and Germany's 10-year yield reaching its highest level since 2011, reflecting widespread concerns over oil-driven inflation and anticipated monetary tightening.
- **Currency Drivers:** The US Dollar is strengthening on the back of hawkish Fed remarks and increased safe-haven demand amidst Middle East tensions. EUR/USD faces resistance near 1.1625, with a potential for a downward reversal. GBP/USD is slipping towards 1.3550 but maintains a bullish bias above its 100-day Simple Moving Average.

2. US & European Markets

- **US Markets:** US stock index futures are largely steady in pre-market trading, following a negative session on Wall Street yesterday. All major US indices (Dow, S&P 500, Nasdaq) recorded monthly gains in August, but September is historically a weaker month for equities. Persistent caution stems from renewed US-Iran tensions and rising oil prices, fueling concerns about inflation and further Fed tightening.
- **European Markets:** European stock markets generally declined, influenced by escalating geopolitical risks and the broader global concern over sustained monetary tightening.

3. Indian Markets & Dalal Street

- **Indian Indices:** Indian benchmark indices, Sensex and Nifty 50, opened flat to marginally lower on Tuesday, September 1, 2026, influenced by weak global cues, renewed West Asia tensions, and tightening US monetary policy expectations. The Nifty 50 was trading around 24,050 and the Sensex at 76,925 in early trade.
- **Economic Data & Flows:** India's GDP expanded by a stronger-than-expected 7.8% in the first quarter of FY27, yet this positive domestic data was overshadowed by external headwinds. Foreign Institutional Investors (FIIs) offloaded a significant amount of equities on Monday. The Nifty Metal sector showed strength, while Healthcare, Pharma, and Realty sectors declined. The India VIX slumped over 17%.

4. Commodities & Crypto Wire

- **Crude Oil:** Oil prices are rising sharply due to heightened US-Iran tensions and ongoing supply disruptions in the Strait of Hormuz. Brent crude is trading around \$91.22/barrel, and WTI crude is at \$86.54/barrel. OPEC+ is anticipated to raise oil output targets from September, concluding a phased unwinding of previous cuts, though geopolitical risks continue to constrain actual supply.
- **Gold (XAU/USD):** Gold is currently under pressure, trading near two-week lows around \$4,430-\$4,450 per ounce. The hawkish stance from the Federal Reserve, implying further rate hikes, is a significant headwind for non-yielding gold. While geopolitical tensions offer some safe-haven support, the increased opportunity cost of holding gold due to higher rates is dominating sentiment. A key support level to watch is \$4,400.
- **Cryptocurrencies:** Bitcoin (BTC) is trading near \$79,000, contributing to a 1.7% rise in the overall crypto market capitalization to \$2.73 trillion. The "Kimchi premium" has reappeared in South Korea, signaling strong retail investor sentiment. Institutional demand for digital assets remains robust, with US spot Bitcoin ETFs attracting substantial inflows. A notable Bitcoin hard fork, adopting BLAKE2b, is set for September 1st, and 24X has completed its first institutional spot crypto trade in Bitcoin.
