Current Session Highlight: 🇺🇸 New York Session Pre-Open Briefing (1 Hr Before Open)

Session News Focus: Wall Street pre-market movers, US Federal Reserve news, mega-cap US stocks (NVDA, MSFT, TSLA), and WTI Crude Oil catalysts.

📰 SECTION 0: DAILY MACRO & FINANCIAL NEWS DIGEST

1. Global Macro & Central Banks

- The IMF projects global growth to slow to 3.1% in 2026 and rebound to 3.4% in 2027, with global headline inflation expected to notably rise to 4.7% in 2026 before easing to 4.1% in 2027. Energy-importing economies outside the technology value chain face a difficult outlook.
- The IMF has called for more support for low-income countries due to higher fuel and food costs and declining development assistance.
- Monetary policy may not be restrictive, and fiscal frameworks need to improve in handling disruptive shocks and building policy space.
- The EU's energy transition policy aims to substantially dampen the macroeconomic impact of future oil and gas price shocks, potentially reducing the inflationary impact by almost 40% and output decline by about twice as much compared to constant policies.

2. US & European Markets

- US stock market futures show a bearish sentiment in pre-market trading, with Dow Jones futures down 1.16% as of 04:59:56 PM EDT on October 23, 2026.
- A sharp rotation in equity markets has seen investors pull back from AI-related stocks, leading to significant declines in semiconductor and tech-heavy indexes. Defensive sectors like utilities, consumer staples, and healthcare have supported broader market performance. The Nasdaq fell 2.60% on October 22, driven by doubts about AI spending, with chipmakers experiencing significant drops.
- US semiconductor producer prices surged 26% year-over-year in September, marking the sixth consecutive month of increases above 25%. This sustained chip inflation suggests that technology budgets based on last year's costs are outdated, potentially leading to wider margins for chipmakers with pricing power. The semiconductor sector sell-off is viewed by some as a buying opportunity, given robust earnings growth and forward net profit margins at all-time highs.
- NVIDIA (NVDA) traded between $210.18 and $213.85 on October 24, 2026, and is currently trading in the lower range of its recent trading activity. Analysts expect NVIDIA to post 9.30 EPS for the current fiscal year, with revenue up 105.9% year-over-year in its last quarterly report. West Family Investments Inc. and other institutional investors have recently purchased NVDA shares.
- Semtech Corporation is introducing new resilient communications building blocks to its AirLink® 5G Networking Solutions, powering AI data center networking and IoT devices. Tower Semiconductor reported a Q2 2026 revenue of $460 million, a 23.7% increase year-over-year, driven by Silicon Photonics, and secured $1.3 billion in contracts for 2027. NXP Semiconductors reported quarterly revenue of $3.50 billion, exceeding analyst estimates, with a 19.5% year-over-year increase.

3. Indian Markets & Dalal Street

- The Indian stock market continued its downward trend, with Sensex and Nifty 50 closing in the red for the fourth consecutive session on October 23, amidst selling pressure across sectors, rising crude oil prices, and weak global cues. The Nifty 50 declined 2.36% and the Sensex fell around 2.15% during the past week.
- Mid-cap and small-cap stocks experienced a disproportionately sharp correction. Investors lost over ₹20 lakh crore this week, primarily due to elevated crude oil prices and global factors.
- Persistent foreign institutional investor (FII) selling, alongside weakening technical indicators, are expected to keep the Indian market under pressure in the coming week (October 26-30). However, domestic institutional investors (DIIs) showed net buying of ₹3,235 crore on Friday.
- India's private sector activity hit a four-month high in October 2026, with the HSBC Flash India Composite Output Index rising to 56.7 from 55.9. Services activity improved, and overseas demand increased at its quickest pace since June 2025.
- Several Indian companies announced Q2 FY27 earnings. Infosys reported a 6.2% YoY rise in net profit, but cut its FY27 revenue growth guidance due to weaker US growth and AI-led pricing pressures. JSW Steel's Q2 profit jumped 225%, Shriram Finance's profit surged 59%, and Coforge's net profit surged 56.5%. Crisil announced a 1700% dividend payout alongside a 20.2% YoY surge in net profit.
- The RBI Bulletin for October 2026 noted that the Indian economy is anchored by solid macroeconomic fundamentals and policy interventions, with GDP growth supported by sustained domestic demand and services. The Indian rupee also gained after a depreciating bias, following RBI measures to curb speculative activity.
- Indian equity valuations have cooled from September 2024 highs, with the Nifty 50's 12-month forward P/E multiple falling 31% by September 2026. Earnings growth is projected at 17% for FY27 and 16% for FY28 for BSE 500 companies.

4. Commodities & Crypto Wire

- Global crude oil prices surged to a six-month high, with Brent crude futures settling at $116.72 per barrel and WTI crude at $103.27 per barrel, driven by escalating Middle East conflict and fears of potential US military strikes against Iran. Brent finished the week up 6% and WTI up 2.3%. Geopolitical tensions and Houthi strikes on Saudi energy assets are contributing to supply vulnerability fears.
- US regulators finalized stablecoin rules under the GENIUS Act, effective January 18, 2027, establishing standards for reserve assets, redemptions, risk management, custody, and issuer supervision.
- Bitcoin spot ETFs recorded $635.49 million in net outflows on October 22, reversing three consecutive inflow sessions. Bitcoin traded near $81,450.
- Solana activated its Alpenglow consensus system on October 21, targeting roughly 150-millisecond finality, which enhances network speed.

- Franklin Templeton recently allocated $150 million in shares of its tokenized money market fund to the XRP Ledger.
- Tether announced that 15 leading Bitcoin mining companies, ASIC manufacturers, and pools are adopting its Mining Development Kit (MDK), an open-source framework designed to make mining infrastructure interoperable and ready for AI-driven automation.
- An Argentinian federal judge dropped a criminal investigation into President Javier Milei regarding the collapse of a cryptocurrency he promoted.
- The National Cryptocurrency Association's 2026 Crypto Readiness Report indicates that 60% of non-holders are open to digital assets, with 33 million Americans planning to buy crypto this year, suggesting a surge in crypto adoption as the knowledge gap narrows.
