Session News Focus: Wall Street pre-market movers, US Federal Reserve news, mega-cap US stocks (NVDA, MSFT, TSLA), and WTI Crude Oil catalysts.

SECTION 0: DAILY MACRO & FINANCIAL NEWS DIGEST

1. Global Macro & Central Banks

- The US 10-year Treasury yield surged above 5.10% during the week, continuing to tighten global financial conditions and making emerging market assets less attractive. This reflects persistent inflation in the US and could lead to the Federal Reserve maintaining a hawkish stance with potential for further rate hikes.
- The Federal Reserve raised its target rate range by 25 basis points to 3.75%–4.00% on September 16, with a median projection of 4.1% by year-end 2026, indicating room for further tightening.
- The European Central Bank also raised rates by 25 basis points on September 10, bringing the deposit rate to 2.50% and the main refinancing operations rate to 2.65%, and is expected to raise rates again in September as it responds to inflationary pressures.
- Reserve Bank of India intervention has helped to limit sharp currency swings amid foreign institutional investor (FII) selling and high crude prices.

2. US & European Markets

- Wall Street futures are seeing mixed sentiment as the market digests Federal Reserve hawkishness and ongoing geopolitical developments. While US PMIs surged, UK PMIs disappointed, leading to a weaker Sterling.
- Mega-cap US stocks like Meta (META) saw a 3.50% decline on September 26, reflecting investor repositioning amid market volatility.
- Taiwan Semiconductor Manufacturing Co. (TSMC) has received approval for US\$44 billion in US investments since 2020, with a massive US\$265 billion plan for Arizona, showing continued bullishness in the semiconductor sector driven by AI and HPC demand. TSMC is rated a strong buy due to its market dominance.
- NXP Semiconductors (NXPI) beat analyst estimates with \$3.61 EPS and \$3.50 billion in revenue, with institutional investors holding over 90% of the stock.
- US market momentum is influenced by a softening labor market and expectations for future Fed rate cuts, which could make digital assets more attractive, especially those with institutional access through ETFs.

3. Indian Markets & Dalal Street

- Indian stock market benchmarks, Nifty and Sensex, concluded their seventh consecutive week of losses. This sustained decline was primarily driven by elevated crude oil prices, surging US bond yields, and persistent selling by foreign institutional investors.
- Despite the weekly losses, Friday saw a modest rebound in both Sensex and Nifty due to value buying.
- Key support for Nifty is around the 23,000 level, while 23,200 acts as immediate resistance.
- India's semiconductor ecosystem is projected for gradual value creation over the next 3-5 years, with significant investment in projects.
- Indian corporate earnings are showing mixed results, with some companies like HDFC Life Insurance seeing revenue declines but profit increases, while others like Piramal Finance show strong growth in both.

4. Commodities & Crypto Wire

- WTI Crude Oil retreated amid reports of potential US-Iran negotiations to reopen the Strait of Hormuz, which could alleviate global oil supply concerns. However, the US-Iran war has been ongoing for seven months, contributing to energy fragility and uncertainty. Oil prices fell approximately 1% on Friday, but Brent was up 2% for the week, and WTI down 7%.
- Brent crude stayed above \$105 per barrel for most of the week, while WTI crude remained elevated above \$90 per barrel due to geopolitical uncertainty. Brent crude closed at \$104.32 per barrel and WTI at \$92.44 per barrel on Friday.
- Gold prices are influenced by global risk sentiment, US bond yields, and inflation expectations.
- The global crypto market capitalization stands at \$2.98 trillion, up 0.3% over 24 hours. Bitcoin (BTC) dominance remains strong at 56.5%, while Ethereum (ETH) holds 11%.
- Bitcoin's price is trading around \$84,000, having briefly extended beyond \$87,000 before some profit-taking. It has entered a bull market phase as its adjusted MVRV ratio crossed above 1.0. Bitcoin ETFs have recorded significant inflows, totaling approximately \$2.39 billion from September 21 to 25.
- Ethereum (ETH) is approaching \$2,695, with Vitalik Buterin outlining new AI-driven privacy upgrades. Fundstrat's Tom Lee expects Ethereum to potentially reach \$60,000 in a couple of years, with a shorter-term target of \$3,000.
- XRP is hovering near \$1.55, with some market predictions suggesting it could hit \$1.70 in September.
