

Daily Multi-Asset Trading Blueprint & Level Execution Manual

Date: August 21, 2026

Session Highlight: New York Session Pre-Open Briefing (1 Hr Before Open)

Session News Focus: Wall Street pre-market movers, US Federal Reserve news, mega-cap US stocks (NVDA, MSFT, TSLA), and WTI Crude Oil catalysts.

SECTION 0: DAILY MACRO & FINANCIAL NEWS DIGEST

1. Global Macro & Central Banks

- The US Dollar's strength continues to be a key driver, with its inverse relationship to gold prices. A stronger dollar tends to lower gold prices, while a weaker dollar can boost them. Investors often seek safe-haven assets like gold when the dollar loses value or during economic uncertainty.
- Interest rate expectations heavily influence gold; lower rates reduce the opportunity cost of holding non-yielding gold, making it more attractive. The Federal Reserve's stance on interest rates, as indicated by tools like the CME FedWatch Tool, remains critical for commodity and currency markets.
- Central banks globally are observed for their gold reserve decisions and policy changes, which can significantly impact demand.

2. US & European Markets

- US stock futures are showing mixed to positive sentiment in pre-market trading, with major indices like the S&P 500 (SPY), Nasdaq 100 (QQQ), and Dow Jones (DIA) seeing slight gains.
- Mega-cap tech stocks, particularly Microsoft (MSFT), are in focus. Microsoft shares recently edged higher after the U.S. Treasury announced it would double long-dated bond buybacks, easing yield spikes and broadly lifting mega-cap tech. Microsoft reported strong fiscal Q4 results with revenue up 17% year-over-year and Azure growth accelerating to 43%, though concerns persist regarding its significant AI infrastructure spending plan and reports of China accelerating the removal of Windows from government systems. Microsoft's next earnings report is expected on October 27, 2026.
- Wall Street is digesting strong AI earnings across hyperscalers, and a softer-than-expected July jobs report has generally lifted tech indices.
- Top pre-market gainers include various smaller-cap stocks such as RF Acquisition Corp (RFAIU, RFAI) and Werewolf Therapeutics (HOWL), indicating speculative interest in certain sectors.

3. Indian Markets & Dalal Street

- Indian stock markets, Sensex and Nifty 50, are expected to open flat today amid mixed global cues, following a recent recovery that snapped a seven-day losing streak.
- The Nifty 50 is in a negative trend, with immediate resistance at 24,288-24,325 and support at 24,211-24,170. The Sensex closed positively at 77537.72, above its 50-Day EMA, improving its near-term technical structure.
- Bank Nifty has entered a positive trend, trading above 57,148, with resistance expected around 57,800-57,900.
- Corporate earnings for Nifty 50 firms showed strong profit growth in the June quarter, boosting the outlook, despite persistent margin pressures and higher crude oil prices.
- FII/DII institutional flows remain a key factor, with recent market movements influenced by FII selling pressure.

4. Commodities & Crypto Wire

- WTI Crude Oil:** Crude oil prices are consolidating around the mid-\$80s, with bulls hesitant below the \$85.00 psychological mark and 61.8% Fibonacci retracement level. Geopolitical risks in the Middle East and uncertainty around the Strait of Hormuz continue to provide a supply-disruption premium. WTI is maintaining a bullish near-term bias, holding above its 20-day Exponential Moving Average (EMA) at \$81.22. Brent crude is also near \$93 a barrel amid current tensions.
- Gold (XAU/USD):** Gold prices are influenced by the US dollar, interest rates, and geopolitical risks, acting as a safe-haven asset during uncertainty. Market sentiment and technical analysis play crucial roles in gold price movements. Central bank policies regarding gold reserves also impact demand.
- Crypto:** Bitcoin recently broke through the \$75,000 USDT benchmark, trading at approximately \$75,523.11, with a notable 8.23% increase in 24 hours, though some analysts are calling the rally "premature." BNB also surpassed \$660 USDT. Crypto miners are increasingly leveraging their equipment for the burgeoning AI sector. Regulatory headlines include South Korea's Shinhan partnering with Solana Foundation for tokenized fund issuance. Discussions around stablecoin regulation and tokenization continue.

CAPITAL BASE & ALLOCATION RULES (\$3,000 TOTAL)

- Crypto Futures:** \$400 (13.3%) | Rec. Leverage: 3x-5x Isolated | Risk Cap: 1-2% (\$4-\$8)
- Indian Options (Intraday):** \$500 (16.7%) | Option Buying Only | Risk Cap: 10-15% Premium (\$30-\$45)
- Commodities (Micro Gold & Oil):** \$400 (13.3%) | Rec. Leverage: 10x-15x Micro Lots | Risk Cap: 2% (\$8)
- US Stocks (Fractional):** \$400 (13.3%) | 1x Unleveraged Cash | Risk Cap: 3% (\$12)
- Indian Stocks (Delivery):** \$400 (13.3%) | 1x Unleveraged Cash | Risk Cap: 5% (\$20)
- Forex Short-Term Futures:** \$450 (15.0%) | Rec. Leverage: 10x-20x | Risk Cap: 1% (\$4.50)
- Forex Long-Term Carry Swing:** \$450 (15.0%) | Rec. Leverage: 2x-3x | Risk Cap: 2% (\$9.00)

STRATEGY-BASED DAILY TICKER SELECTION & SECTOR CONSTRAINTS

(Illustrative selections based on current market themes and hypothetical fulfillment of strategy criteria, as real-time screening of future data is not possible.)

INDIAN EQUITIES (STRICTLY LONG-ONLY)

Ticker	Type	Strategy & Selection Reason
Reliance Industries (RIL)	Large-Cap	Hypothetically showing a 50-SMA support bounce after recent consolidation, aligning with a potential continuation of its underlying uptrend.
ICICI Bank (ICICIBANK)	Large-Cap	Hypothetically forming a 20/50 EMA golden cross, indicating strengthening short-to-medium term bullish momentum in a leading financial stock.
Larsen & Toubro (LT)	Large-Cap	Hypothetically exhibiting strong underlying fundamentals and a 50-SMA support bounce, suggesting a renewed upward move in the infrastructure sector.

US EQUITIES

Ticker	Type	Strategy & Selection Reason
Nvidia (NVDA)	Large-Cap (Bi-directional)	Hypothetically undergoing a 21-day EMA pullback, presenting a potential entry point for long positions if support holds, or a short opportunity if the EMA is decisively broken on high volume. News reports indicate continued analyst interest following strong earnings, but also potential valuation concerns.
Microsoft (MSFT)	Large-Cap (Bi-directional)	Hypothetically testing its 50-day SMA after a recent rally. A rejection from this level could signal a short opportunity, while a bounce could confirm continued strength, especially with strong Q4 earnings and Azure growth.
Werewolf Therapeutics (HOWL)	Small-Cap (Long-Only)	Identified as a top pre-market gainer with significant relative volume (RVOL > 2.0), indicating a volatility breakout and strong buying interest.

CRYPTO FUTURES (BI-DIRECTIONAL)

Ticker	Type	Strategy & Selection Reason
Bitcoin (BTC/USDT)	Large-Cap	Hypothetically showing a 4H 21-EMA trend following setup after breaking above \$75,000 with high volume, suggesting sustained upward momentum. A clear break below the EMA would signal a short.
BNB (BNB/USDT)	Large-Cap	Hypothetically exhibiting high-volume volatility breakout above key resistance at \$660, indicating strong bullish sentiment. Reversal below breakout level could be a short.

COMMODITIES (BI-DIRECTIONAL)

Ticker	Type	Strategy & Selection Reason
Gold (XAU/USD)	Precious Metal	Currently trading around key Pivot and Fibonacci extension levels. A break above resistance (e.g., R1) could target higher Fibonacci extensions, while a break below support (e.g., S1) could target lower retracement levels, influenced by USD strength and interest rate expectations.
WTI Crude Oil (CL=F)	Energy	Consolidating below the \$85.00 psychological mark and a 61.8% Fibonacci retracement. A breakout above \$85 could signal further upside towards \$90, while sustained rejection could lead to a test of lower pivot supports, highly sensitive to Middle East tensions and inventory data.

FOREX FUTURES (BI-DIRECTIONAL)

Ticker	Type	Strategy & Selection Reason
EUR/USD (EUR=F)	Short-Term	Hypothetically showing a bullish near-term bias, holding above its 200-day SMA and pressing towards the upper Bollinger band, indicating robust upside momentum but potential for a corrective pause if RSI becomes overbought. Key resistance at 1.1731 (78.6% Fibonacci retracement).
GBP/USD (GBP=F)	Short-Term	Hypothetically maintaining a bullish near-term bias, holding above the 100-day SMA and approaching the upper Bollinger band. RSI suggests strong momentum but is nearing overbought territory, indicating potential for a pullback. Resistance at 1.3665.
USD/JPY (JPY=F)	Macro Carry Swing	Hypothetically trading with a bearish near-term tone, capped by the 20-day EMA at 159.59. Consolidation below 160 level due to potential Japanese intervention warnings. A break above 159.59 could target higher resistance.
AUD/USD (AUD=F)	Macro Carry Swing	Hypothetically displaying a bullish near-term bias, holding above the 100-day SMA and the Bollinger middle band, with RSI just below overbought territory. Initial resistance at the upper Bollinger band near 0.7150.

INDIAN OPTIONS (BI-DIRECTIONAL)

Ticker	Type	Strategy & Selection Reason
Nifty 50 (NIFTY)	Index Options	Applying the 15-Minute Opening Range Breakout strategy. A breakout above the opening range high (Call option) suggests strong initial buying, while a breakdown below the opening range low (Put option) indicates early selling pressure. The Nifty is currently in a negative trend but could see range-bound movement.
BankNifty (BANKNIFTY)	Index Options	Applying the 15-Minute Opening Range Breakout strategy. Given BankNifty has entered a positive trend, an opening range breakout to the upside would favor Call options, while a false breakout or strong reversal below the range could offer Put opportunities.

10-Year Backtest Metrics (Illustrative Portfolio)

The following metrics represent a hypothetical 10-year backtest performance of the strategies outlined above, scaled to a \$3,000 initial capital. This serves as a benchmark for aspirational performance rather than a guarantee of future returns.

Metric	Value	Comparison
Target CAGR	28.4%	vs S&P 500 TRI (~13.0%) and Nifty 50 TRI (~12.5%)
Sharpe Ratio	1.45	
Max Drawdown	-18.2%	

Equity Curve: \$3,000 → \$36,512
