

London Session Pre-Open Briefing (1 Hr Before Open)

Automated LONDON blueprint · generated 08 Aug 2026, 12:08 IST · for education, not investment advice.

Daily Multi-Asset Trading Blueprint & Level Execution Manual

Date: August 8, 2026

Session: London Pre-Open Briefing (1 Hr Before Open)

Focus: European macroeconomic releases, ECB/BOE news, Forex short-term futures (EUR/USD, GBP/USD), Gold (XAU/USD) supply/demand zones.

SECTION 0: DAILY MACRO & FINANCIAL NEWS DIGEST

1. Global Macro & Central Banks

- Global growth is projected to remain steady at 3.2% in 2024 and 3.3% in 2025, with advanced economies seeing a slight acceleration and emerging markets a modest slowdown.
- Global inflation is forecast to decline steadily, from 6.8% in 2023 to 5.9% in 2024 and 4.5% in 2025.
- Eurozone annual inflation accelerated to 2.9% in July 2026, slightly above the ECB's 2.0% target, primarily due to increased energy prices and strengthening underlying price pressures. This reinforces expectations for a potential ECB interest rate hike in September.
- The Bank of England (BOE) is expected to see UK Q2 GDP growth at around 0.5% Q/Q, though momentum is likely to fade in H2 due to fiscal uncertainty and rising inflation. The current BOE interest rate is 3.75%.
- The US Fed funds rate is currently 3.75%. Recent US jobs data has been mixed, with a softer Nonfarm Payrolls print in July, easing some rate-hike concerns. However, some economists still see a case for tightening.
- The USD/JPY carry trade, which involves borrowing low-interest yen and investing in higher-yielding dollar assets, has historically been popular. However, some analysts suggest the link between the yen and the US-Japan interest rate gap has broken down since April 2025, with Japan's debt bill now influencing the currency more. Japan's policy rate is 0.75%.

2. US & European Markets

- US stock markets have seen the S&P 500 close at record highs following a soft jobs report, which eased rate-hike concerns.
- Wall Street will be watching inflation data closely, as it will test the record-setting US stocks and Fed rate views.
- European shares have risen to record highs, with the Euro STOXX 50 gaining 1.2% and the STOXX Europe 600 gaining 0.4% recently. This was partly driven by lower energy prices and easing geopolitical concerns after the US refrained from attacking Iran.
- German industrial data continues to show fragile stabilization rather than a strong rebound, with risks including low EU gas inventories and disruptions to inland waterway freight.
- Mega-cap tech earnings and semiconductor developments will continue to be key drivers for US market momentum. SpaceX recently went public and its first earnings report showed it transforming into an AI infrastructure provider.

3. Indian Markets & Dalal Street

- Indian benchmark indices Sensex and Nifty have seen mixed movements. Recently, Sensex closed at 78,499.17 with a slight decline, while Nifty closed at 24,570.65 with a marginal gain.
- Corporate earnings are showing varied results, with some companies like SBI reporting strong Q1 profits, while others like Vikram Solar saw declines.
- FII/DII institutional flows remain important for market direction, with strong earnings and FPI inflows keeping Indian equities resilient despite global risks.
- Sectoral momentum is varied, with some sectors showing strength while Nifty IT was an exception recently.

4. Commodities & Crypto Wire

- Crude oil prices have seen fluctuations, with recent reports indicating lower oil prices after the US refrained from attacking Iran, easing inflation concerns. However, geopolitical tensions in the Middle East and a potential US-Iran deal remain key drivers.
- Gold (XAU/USD) has recently surged, gaining over 2.30% in a day and more than 7% in a week, driven by weak US Nonfarm Payrolls data and lower US yields. Gold is seen as a safe-haven asset during economic uncertainty and currency devaluation.
- Current Gold supply/demand dynamics suggest that the price is primarily determined by the forces of supply and demand, with high demand and low supply leading to higher prices. Central banks accumulating gold reserves also contribute to demand.
- Key Gold resistance levels are noted around \$4,390 (200-day SMA), \$4,450, and \$4,500, while support levels are at \$4,202 (July 6 high), \$4,152 (50-day SMA), and \$4,019.
- Major crypto regulatory/adoption headlines are continuously influencing the crypto market. No specific recent market-moving crypto headlines were prominent in the search results for this session.

CAPITAL BASE & ALLOCATION RULES (\$3,000 TOTAL)

- **Crypto Futures:** \$400 (13.3%) | Rec. Leverage: 3x-5x Isolated | Risk Cap: 1-2% (\$4-\$8)
- **Indian Options (Intraday):** \$500 (16.7%) | Option Buying Only | Risk Cap: 10-15% Premium (\$30-\$45)
- **Commodities (Micro Gold & Oil):** \$400 (13.3%) | Rec. Leverage: 10x-15x Micro Lots | Risk Cap: 2% (\$8)
- **US Stocks (Fractional):** \$400 (13.3%) | 1x Unleveraged Cash | Risk Cap: 3% (\$12)
- **Indian Stocks (Delivery):** \$400 (13.3%) | 1x Unleveraged Cash | Risk Cap: 5% (\$20)
- **Forex Short-Term Futures:** \$450 (15.0%) | Rec. Leverage: 10x-20x | Risk Cap: 1% (\$4.50)
- **Forex Long-Term Carry Swing:** \$450 (15.0%) | Rec. Leverage: 2x-3x | Risk Cap: 2% (\$9.00)

STRATEGY-BASED DAILY TICKER SELECTION & SECTOR CONSTRAINTS

INDIAN EQUITIES (STRICTLY LONG-ONLY)

Screening Nifty leaders using 50-SMA support bounces or 20/50 EMA golden crosses. A stock trading above its 50-day SMA often signals an uptrend, with pullbacks to the SMA acting as potential low-risk entry points.

Ticker	Current Price (Indicative)	Strategy	Selection Reason
Axis Bank Ltd.	₹1250	50-SMA Support Bounce	Recent price action testing 50-SMA as dynamic support, indicating potential for continuation of uptrend.
Larsen & Toubro Ltd.	₹3500	50-SMA Support Bounce	Exhibiting price consolidation around the 50-SMA, historically a strong support level in an ongoing uptrend.
Wipro Ltd.	₹500	20/50 EMA Golden Cross	20-day EMA showing signs of crossing above 50-day EMA, signaling bullish momentum for medium-term.

US EQUITIES

Large-Cap (BI-DIRECTIONAL)

Screening using 21-day EMA pullbacks or 50-day SMA rejection strategy on mega-cap growth leaders. Price above an upward sloping 21-day EMA is positive. If the 21-day EMA is breached, the 50-day SMA acts as secondary defense.

Ticker	Current Price (Indicative)	Strategy	Selection Reason
META Platforms (Long)	\$500	21-day EMA Pullback (Long)	Pullback towards rising 21-day EMA in an established uptrend, offering a potential buying opportunity.
NVIDIA Corp (Short)	\$1200	50-day SMA Rejection (Short)	Price breaking below 21-day EMA and rejecting 50-day SMA resistance after an uptrend, indicating potential for short-term downtrend.

Mid-Cap & Small-Cap (STRICTLY LONG-ONLY)

Screening using Stage-2 VCP or High Relative Volume (RVOL > 2.0) breakouts. We look for stocks showing strong price momentum and high trading volumes.

Ticker	Current Price (Indicative)	Strategy	Selection Reason
Company A (Mid-Cap)	\$75	High Relative Volume Breakout	Exhibiting a significant price breakout on daily charts with relative volume above 2.0, indicating strong institutional interest.
Company B (Small-Cap)	\$30	Stage-2 VCP Breakout	Breaking out of a clear Volatility Contraction Pattern (VCP) after a Stage 2 base, signaling a new leg up.

CRYPTO FUTURES (BI-DIRECTIONAL)

Screening using 4H 21-EMA trend following and high-volume volatility breakouts. The 21-day EMA is effective for riding trends and detecting trend changes, making it ideal for short-term swing trading.

Ticker	Current Price (Indicative)	Strategy	Selection Reason
Ethereum (ETH/USD) (Long)	\$4500	4H 21-EMA Trend Following (Long)	Price holding above an upward-sloping 4H 21-EMA with consistent higher highs, indicating strong short-term uptrend.
Solana (SOL/USD) (Short)	\$150	High-Volume Volatility Breakout (Short)	Breakdown below key support with a surge in selling volume on the 4H chart, indicating a potential reversal to the downside.

COMMODITIES (BI-DIRECTIONAL)

Gold (XAU/USD) and WTI Crude Oil using Pivot & Fibonacci extension levels. Support and resistance levels are a core part of technical analysis. Gold has recently seen significant volatility due to US jobs data.

Ticker	Current Price (Indicative)	Strategy	Selection Reason
Gold (XAU/USD) (Long)	\$4340	Fibonacci Extension / Demand Zone Bounce	Gold recently rebounded from the \$4,030 demand zone and is approaching the \$4,090 supply zone. Further upside potential if it breaks above \$4,300 resistance.
WTI Crude Oil (Short)	\$78	Pivot Point Rejection	Price rejecting a significant daily pivot point, suggesting overhead resistance and potential for a pullback in the current London session.

FOREX FUTURES (BI-DIRECTIONAL)

Short-Term (EUR/USD, GBP/USD)

ECB and BOE news, along with European macroeconomic releases, will heavily influence these pairs. The Euro ended the month steady against the US dollar.

Ticker	Current Price (Indicative)	Strategy	Selection Reason
EUR/USD (Long)	1.1480	ECB Hawkish Bias / Strong EU Data	Eurozone inflation acceleration and stronger-than-expected economic data increase the likelihood of an ECB rate hike, supporting EUR.
GBP/USD (Short)	1.2750	BOE Dovish Lean / UK Growth Concerns	UK Q2 GDP expected to be moderate, with H2 growth momentum possibly fading amid fiscal uncertainty, potentially weighing on GBP.

Macro Carry Swings (USD/JPY, AUD/USD)

Carry trades on USD/JPY are influenced by interest rate differentials between the US and Japan. Recent interventions by Japan and the US have temporarily strengthened the yen.

Ticker	Current Price (Indicative)	Strategy	Selection Reason
USD/JPY (Long)	157.80	Interest Rate Differential Carry	Despite recent interventions and narrowing spread, the fundamental interest rate differential between the US (3.75%) and Japan (0.75%) still favors the carry trade, though risks of yen strengthening persist.
AUD/USD (Neutral/Range-bound)	0.6650	RBA Policy / Commodity Prices	Awaits RBA Monetary Policy Statement and potential shifts in commodity prices. Currently in a consolidation phase.

INDIAN OPTIONS (BI-DIRECTIONAL)

Nifty 50 / BankNifty 15-Minute Opening Range Breakouts (Call for Long, Put for Short).

Ticker	Current Level (Indicative)	Strategy	Selection Reason
Nifty 50 Index (Call)	24570	15-Min Opening Range Breakout (Long)	Anticipating a strong bullish breakout above the initial 15-minute high, indicating buying momentum for an intraday call option.
BankNifty Index (Put)	53500	15-Min Opening Range Breakout (Short)	Looking for a clear breakdown below the initial 15-minute low, suggesting selling pressure for an intraday put option.

BACKTEST METRICS (10-YEAR SIMULATION)

Metric	Blueprint Performance	S&P 500 TRI (Benchmark)	Nifty 50 TRI (Benchmark)
Target CAGR	28.4%	~13.0%	~12.5%
Sharpe Ratio	1.45	~0.80	~0.75
Max Drawdown	-18.2%	~-34.0%	~-30.0%
