📰 SECTION 0: DAILY MACRO & FINANCIAL NEWS DIGEST

1. Global Macro & Central Banks

- The International Monetary Fund (IMF) projects global growth to slow to 3.1% in 2026, rebounding to 3.4% in 2027, with headline inflation rising to 4.7% in 2026 before easing to 4.1% in 2027. Risks remain tilted to the downside due to geopolitical disruptions and fiscal vulnerabilities. The IMF urges advanced economies to address ballooning debt amidst spiking bond yields.
- The European Central Bank (ECB) is widely expected to keep its key interest rates unchanged at its October 29, 2026 meeting, following a 25 basis point hike in September 2026. Market implied probabilities for a rate hike in October are low (around 7-11.7%).
- A Bank of England (BoE) official expressed caution regarding predictions for multiple rate rises.
- Today's US Consumer Price Index (CPI) inflation data is highly anticipated, with expectations for an annual acceleration to 3.6% in September 2026 and core inflation rising to 2.5%. This release will provide crucial insights into the Federal Reserve's monetary policy outlook, with a low probability of an October rate hike currently priced in, but a higher chance for December. New York Fed President John Williams indicated one more rate hike this year might be appropriate, but not further tightening in 2027.

2. US & European Markets

- US stock futures traded higher this morning, October 14, 2026, ahead of the CPI report, despite a cautious close overnight due to mixed bank earnings and weakness in financial and chipmaker stocks. Dow Jones, Nasdaq 100, and S&P 500 futures showed modest gains.
- Mega-cap technology earnings (Alphabet, Amazon, Microsoft, Meta, Apple) are scheduled for October, with significant AI and cloud computing updates expected to influence market performance.
- European stock futures are also indicated higher this Wednesday morning, with Frankfurt, Milan, and London set to lead, driven by optimism ahead of the US inflation data. Strong results from ASML, a major chipmaking equipment supplier, boosted the technology sector, citing robust AI-driven demand. European companies are generally perceived to be in a better position to manage higher energy prices compared to 2022.

3. Indian Markets & Dalal Street

- Indian benchmark indices opened lower on Wednesday, October 14, 2026, with the Sensex dropping over 100 points and the Nifty 50 trading below 22,700. However, the market showed signs of recovery, supported by hopes of relief on Long-Term Capital Gains (LTCG) tax and Securities Transaction Tax (STT), as well as a decrease in institutional selling.
- Foreign Institutional Investors (FIIs) were net sellers yesterday, offloading equities worth Rs 1,305.13 crore, while Domestic Institutional Investors (DIIs) were net buyers, acquiring equities worth Rs 2,439.24 crore. The Nifty IT sector witnessed gains, contrasting with a decline in the Nifty PSU Bank index.

4. Commodities & Crypto Wire

- Crude oil prices advanced today, driven by escalating geopolitical tensions in the Middle East involving Saudi Arabia and Yemen's Houthi rebels, which are raising concerns about supply disruptions. Brent crude futures rose to $106.2-$107.35 a barrel, while US WTI crude futures gained to $94.7-$95.38 a barrel. Increased Russian diesel exports are expected to provide some relief, potentially limiting sharp price movements.
- Gold prices experienced declines today as traders awaited the US CPI data for cues on the Federal Reserve's rate path. Geopolitical tensions and rising oil prices also contribute to persistent inflation concerns. Gold is currently trading around $4,160.51, having fallen approximately 3.02% over the last month. Key technical levels for Gold include immediate resistance at $4,205 and strong support from an ascending trend line originating in June 2026.
- Bitcoin maintained a tight trading range above $83,000 as cryptocurrency markets also awaited the US CPI report. The overall crypto market capitalization stands at about $2.79 trillion. Ethereum saw significant whale accumulation, with over 166,000 ETH added in the past 72 hours, indicating support around $2,450-$2,500 and resistance at $2,650-$2,750. Marex has introduced institutional Quantitative Investment Strategies (QIS) indices for digital assets, including Bitcoin and Ethereum.
