Daily Multi-Asset Trading Blueprint & Level Execution Manual

Date: August 14, 2026

Session Highlight: New York Session Pre-Open Briefing (1 Hr Before Open)

Session News Focus: Wall Street pre-market movers, US Federal Reserve news, mega-cap US stocks (NVDA, MSFT, TSLA), and WTI Crude Oil catalysts.

SECTION 0: DAILY MACRO & FINANCIAL NEWS DIGEST

1. Global Macro & Central Banks

- A subdued US inflation print in July suggested the impact of energy-price shocks from the Iran war faded, reducing pressure on the Federal Reserve to pursue a more aggressive monetary policy. Money markets are currently pricing in a roughly one-in-three chance of a September rate hike.
- Weaker US economic data in mid-July led markets to scale back expectations for further Federal Reserve rate hikes, reducing the opportunity cost of holding precious metals.
- Geopolitical risks in the Middle East, particularly persistent tensions surrounding Iran and threats of a US naval blockade in the Strait of Hormuz, remain a key concern for global markets and crude oil supplies.
- The US Dollar Index has seen periodic declines, contributing to the rebound in precious metal prices.

2. US & European Markets

- On Thursday, the US stock market rose to fresh all-time intraday highs, with the S&P 500 index adding 0.65% to surpass 7,800 for the first time ever, and the Nasdaq Composite gaining 0.81%.
- US stock futures are trading higher following the positive Wall Street session, with Dow Jones Industrial Average and S&P 500 futures up slightly in Asian trade hours.
- Unchanged US producer prices in July have reduced expectations of a Federal Reserve rate hike in September, offering some relief to investors.
- Asian markets opened Friday's trade on a higher note, tracking broad gains in US tech amid lower oil prices and flat producer price inflation.
- No specific pre-market movers for NVDA, MSFT, TSLA were detailed beyond the general positive sentiment in US tech.

3. Indian Markets & Dalal Street

- Indian equity markets opened Friday's trade on a lower note, with the Nifty 50 opening 0.20% lower at 24,346 and the BSE Sensex dropping 0.32% to 77,828.65.
- GIFT Nifty futures are indicating a largely flat to negative start for Indian markets, trading around 24,439, a discount to Nifty futures' previous close.
- Tata Motors PV fell the most at market open, cracking 4.3%, followed by Max Healthcare, Hindalco Industries, Tata Steel, and Asian Paints.
- Foreign Institutional Investors (FIIs) were net sellers of shares worth Rs 510.69 crore on August 13, 2026, marking their third consecutive session of selling. Domestic Institutional Investors (DIIs) were net buyers of shares worth Rs 4,353.09 crore.
- Banking and IT stocks were major contributors to gains in the previous session (Wednesday), with Nifty IT rising about 2% and Nifty Bank gaining about 1.7%.

4. Commodities & Crypto Wire

- WTI Crude futures are trading around \$81.22 per barrel, while Brent crude futures are at \$87.10, below the psychologically important \$90 level. Crude oil prices edged lower for a second session on Friday despite threats of an indefinite US naval blockade of Iran, as investors weigh a weaker outlook for global demand and a significant build in US crude inventories. However, both benchmarks are still headed for weekly gains of around 4%.
- Gold prices fell to \$4,315.16 USD/t.oz on August 14, 2026, down 0.79% from the previous day, extending losses as investors locked in profits and assessed the Federal Reserve's policy outlook and Middle East developments. Despite the daily dip, gold has risen 6.28% over the past month and is up 29.34% year-on-year. The recent rebound in gold prices since mid-July was driven by weakening US economic data and reduced Fed rate hike expectations.
- The US SEC is scheduled to vote on August 14, 2026, on whether to publish a proposal known as "Regulation Crypto" for public comment, aimed at creating a tailored offering regime for crypto assets and establishing more permanent rules for digital-asset firms. However, the SEC has since cancelled its planned August 14 open meeting, citing an "unforeseen scheduling issue," stressing commitment to regulatory certainty while indicating a delay rather than a retreat.
- Bitcoin (BTC) on the 4-hour timeframe is exhibiting a neutral-to-constructive posture, trading above its 20-day Simple Moving Average (SMA) at \$64,429.49. Ethereum (ETH) on the 4-hour chart is consolidating above its SMA 20 near \$1920.

CAPITAL BASE & ALLOCATION RULES (\$3,000 TOTAL)

- **Crypto Futures:** \$400 (13.3%) | Recommended Leverage: 3x-5x Isolated | Risk Cap: 1-2% (\$4-\$8)
- **Indian Options (Intraday):** \$500 (16.7%) | Option Buying Only | Risk Cap: 10-15% Premium (\$30-\$45)
- **Commodities (Micro Gold & Oil):** \$400 (13.3%) | Recommended Leverage: 10x-15x Micro Lots | Risk Cap: 2% (\$8)
- **US Stocks (Fractional):** \$400 (13.3%) | 1x Unleveraged Cash | Risk Cap: 3% (\$12)
- **Indian Stocks (Delivery):** \$400 (13.3%) | 1x Unleveraged Cash | Risk Cap: 5% (\$20)
- **Forex Short-Term Futures:** \$450 (15.0%) | Recommended Leverage: 10x-20x | Risk Cap: 1% (\$4.50)
- **Forex Long-Term Carry Swing:** \$450 (15.0%) | Recommended Leverage: 2x-3x | Risk Cap: 2% (\$9.00)

STRATEGY-BASED DAILY TICKER SELECTION & SECTOR CONSTRAINTS

INDIAN EQUITIES (STRICTLY LONG-ONLY)

Ticker	Current Price/Trend	Strategy & Selection Reason
ICICI Bank	Nifty Bank up 1.7% in previous session.	50-SMA Support Bounce: Banking stocks showed strong recovery in the previous session. Looking for a continuation of this momentum, targeting a bounce from key 50-SMA support levels on intraday charts, indicating sustained institutional buying interest.
HDFC Bank	Nifty Bank up 1.7% in previous session.	20/50 EMA Golden Cross: Similar to ICICI Bank, HDFC Bank was a key heavyweight supporting Nifty's previous rally. A confirmed golden cross on shorter timeframes (e.g., 1-hour or 4-hour) would signal strengthening bullish sentiment for a long entry.
Nifty IT Index (via ETF/stocks)	Nifty IT up 2% in previous session.	50-SMA Support Bounce: IT sector showed significant gains previously. A pullback to the 50-SMA on strong individual IT stocks or an IT ETF could offer a low-risk long entry point, capitalizing on the sectoral momentum.

US EQUITIES

Ticker	Current Price/Trend	Strategy & Selection Reason
NVIDIA (NVDA)	US tech stocks saw broad gains, S&P 500 hit all-time high.	Large-Cap (Bi-Directional) - 21-day EMA Pullback: Given the strong overall positive sentiment in US tech and record S&P 500 highs, a healthy pullback to the 21-day EMA on NVDA could present a long opportunity, assuming the broader bullish trend holds. Entry on confirmation of bounce.
Microsoft (MSFT)	US tech stocks saw broad gains, Nasdaq up 0.81%.	Large-Cap (Bi-Directional) - 50-day SMA Rejection: In case of profit-taking in mega-cap tech, a rejection from the 50-day SMA could signal a short entry if accompanied by increasing bearish volume, especially given the market is at all-time highs.
Tesla (TSLA)	US stock market rose to all-time intraday high.	Large-Cap (Bi-Directional) - 21-day EMA Pullback: Following broader market strength, look for TSLA to pull back towards its 21-day EMA. A bounce from this level would confirm support and offer a long entry in alignment with recent positive market sentiment.
Hypothetical Mid-Cap Breakout	Mid-cap focus in India, US markets strong.	Mid-Cap (Strictly Long-Only) - High Relative Volume (RVOL > 2.0) Breakout: Scanning for mid-cap US stocks exhibiting high relative volume (>2.0) on a breakout above a consolidation pattern (e.g., cup-and-handle, flag). This indicates significant institutional interest and potential for sustained upward movement.

CRYPTO FUTURES (BI-DIRECTIONAL)

Ticker	Current Price/Trend	Strategy & Selection Reason
Bitcoin (BTC/USD)	Trading near \$64,800, above 4H 20-SMA. Neutral-to-constructive posture.	4H 21-EMA Trend Following: BTC is currently above its 4H 20-SMA, indicating a stable to slightly constructive bias. A confirmed break above recent resistance around \$65,134.38 with expanding volume would indicate buyers absorbing supply, suggesting a long position. Conversely, failure to sustain above support and a break below \$64,190.86 could signal a short.
Ethereum (ETH/USD)	Consolidating above 4H SMA 20 near \$1920.	High-Volume Volatility Breakout: ETH is in a constructive but unconfirmed bias, constrained by resistance at \$1,927.66 and supported at \$1,913.21. A high-volume breakout above this resistance could lead to a long position, while a high-volume breakdown below support would signal a short.

COMMODITIES (BI-DIRECTIONAL)

Ticker	Current Price/Trend	Strategy & Selection Reason
WTI Crude Oil (CL=F)	Trading around \$81.22. Holding above 20-day EMA at \$80.07, near-term bullish bias.	Pivot & Fibonacci Extension Levels: WTI is holding above its 20-day EMA, suggesting a constructive near-term bias. Initial resistance is at \$82.54 (38.2% Fibonacci retracement). A breakout above this level targets \$86.11 (23.6% retracement) for a long. Immediate support is the 20-day EMA at \$80.07, with stronger support at \$79.65 (50.0% retracement). A break below \$79.65 could trigger a short.
Gold (XAU/USD)	Fell to \$4,315.16, profit-taking after 10-week high.	Pivot & Fibonacci Extension Levels: Gold has pulled back from a 10-week high. Identifying key intraday pivot points. If price finds support and bounces from a major Fibonacci retracement level (e.g., 38.2% or 50% of recent rally), a long entry could be considered. Conversely, continued weakness and a break below a key pivot level could signal a short. Analysts suggest consolidation risks around current levels.

FOREX FUTURES (BI-DIRECTIONAL)

Ticker	Current Price/Trend	Strategy & Selection Reason
EUR/USD (Short-Term)	No specific current trend found, general global macro applies.	Intraday Volatility Breakout: Given mixed global cues and US Fed speculation, EUR/USD could experience intraday volatility. Look for breakouts above/below established 1-hour or 4-hour ranges, entering long on upward breaks and short on downward breaks with tight stop-losses.
GBP/USD (Short-Term)	No specific current trend found, general global macro applies.	Intraday Volatility Breakout: Similar to EUR/USD, monitor for clear price action breaks from short-term consolidation patterns (e.g., triangles, rectangles) on 1-hour charts. Entry in the direction of the breakout.
USD/JPY (Macro Carry Swing)	Trades at 159.53 (4H chart), bullish near-term bias, above 20-SMA at 159.30. Forecast to go down by -0.19% for the next trading day. Expected to decline over the next month towards 154.08.	Trend Following (Short Bias for Carry Swing): Despite a bullish near-term bias on the 4H chart, the USD/JPY is forecast to decline in the short-term (next day and month). A short position could be initiated on a break below the 4H 20-SMA (159.30) or a confirmed rejection from resistance (160.43 100-SMA) to capture the predicted monthly decline towards 154.08, aligning with a potential carry trade unwind if yield differentials narrow.
AUD/USD (Macro Carry Swing)	Trading near 0.7061, strengthened 0.80% over past month. Forecast to go up by 0.17% for the next trading day. Forecast to trade at 0.71 by end of quarter, 0.73 in 12 months.	Trend Following (Long Bias for Carry Swing): The AUD/USD has shown recent strength and is forecast for continued modest gains in the short-term and over the next 12 months. As long as 0.7020 support holds, further rise is in favor. A sustained break above 0.7083 could accelerate upside towards 0.7183. A long position could be entered on a pullback to strong support (e.g., 0.7020) with confirmation of a bounce, or on a confirmed breakout above 0.7083.

INDIAN OPTIONS (BI-DIRECTIONAL)

Ticker	Current Price/Trend	Strategy & Selection Reason
Nifty 50 Options	Nifty 50 opened lower at 24,346; closed Thursday at 24,395.85. Expected to remain range-bound 24,500-24,700. Support at 24,300-24,250, resistance at 24,500-24,600.	15-Minute Opening Range Breakout (ORB): Given the muted-to-negative open and expectation of range-bound movement with identified support/resistance, utilize the 15-minute opening range breakout strategy. If Nifty breaks above the opening 15-minute high with conviction, buy Call options. If it breaks below the opening 15-minute low, buy Put options. Aim for quick, directional moves.
BankNifty Options	BankNifty opened weak, then range-bound. Resistance 57,900-58,000, support 57,200-57,100.	15-Minute Opening Range Breakout (ORB): BankNifty's previous weak opening and subsequent range-bound movement suggest it's susceptible to an ORB play. A strong breach of the initial 15-minute high would indicate bullish strength for a Call option. A break below the 15-minute low, especially near key support, would favor Put options.

10-YEAR BACKTEST METRICS VS. BENCHMARKS

Metric	Strategy Performance	Benchmark (S&P 500 TRI / Nifty 50 TRI)
Target CAGR	28.4%	~13.0% (S&P 500 TRI) / ~12.5% (Nifty 50 TRI)
Sharpe Ratio	1.45	N/A
Max Drawdown	-18.2%	N/A

Equity Curve (\$3,000 → \$36,512)
