SECTION 0: DAILY MACRO & FINANCIAL NEWS DIGEST

1. Global Macro & Central Banks

- Eurozone inflation climbed to 2.9% in July, with annual growth beating expectations in Q2.
- The US Federal Reserve maintained unchanged interest rates this week, adopting a cautious stance on inflation, although some policymakers dissented, advocating for a 25-basis-point hike. Persistent concerns about rising consumer costs are anticipated to prompt the central bank towards an interest rate hike in the future.
- Global median inflation, which saw a decline post-pandemic, has slowly edged up, intensified by higher energy prices due to the Iran War.
- A weaker US Dollar can make gold more accessible for international investors, stimulating demand, while a stronger dollar tends to increase its cost.
- Central banks worldwide are increasing their gold reserves to diversify away from the US Dollar.

2. US & European Markets

- Wall Street futures showed gains in the pre-market on Friday, July 31, 2026, driven by recent Big Tech earnings releases and ongoing tensions in the Middle East.
- European shares commenced trading higher on Friday, mirroring a robust rebound observed in Wall Street and Asian markets. The Euro Area's EU50 index rose 1.24% to 6420 points on July 31, 2026, hitting an all-time high in July, propelled by a global rally in tech stocks fueled by AI enthusiasm.
- Microsoft's stock surged 15% following strong earnings, while Meta Platforms saw a 9% decline as investors reallocated capital within the Big Tech AI sector.
- The semiconductor industry experienced a boost, with South Korean chip stocks soaring and a recovery in the European chip sector. Samsung's forecast of memory shortages until 2028 led to significant gains for SanDisk, Micron, AMD, and Intel, with some shares rocketing up to 23%.
- US-listed spot Bitcoin Exchange Traded Funds (ETFs) continued to attract institutional inflows.

3. Indian Markets & Dalal Street

- Indian equity markets concluded higher on July 31, 2026, buoyed by strong quarterly earnings reports from leading financial and automotive firms, including Bajaj Finance and Bajaj Finserv, coupled with renewed inflows from foreign institutional investors (FIIs).
- The BSE Sensex climbed 0.21% to 78,094.64 points, and the NSE Nifty 50 advanced 0.27% to 24,383.60 points. The Nifty extended its recovery for a second consecutive session, closing at 24,317.15 on Thursday.

4. Commodities & Crypto Wire

- WTI crude oil prices have risen above \$84 per barrel, driven by escalating geopolitical tensions (e.g., President Trump's shortened deadline for Russia) and tight US inventories.
- OPEC+ is anticipated to approve a production increase of 188,000 barrels per day for September, marking the completion of the current tier of increases, with no further hikes projected for the remainder of the year. WTI crude is currently consolidating in the \$84.00 to \$87.00 range.

- Bitcoin (BTC) is trading around \$65,400, showing a modest recovery and holding above critical support levels, partly due to institutional inflows into US-listed spot Bitcoin ETFs. Ethereum (ETH) is consolidating between key Exponential Moving Averages (EMAs), although it recently tumbled below \$1,900. XRP is expected to trade within a \$1.05 to \$1.15 range.
- The CLARITY Act, a significant piece of crypto legislation, has stalled in the US Senate, raising concerns about the crypto bull market.
