Date: September 9, 2026

Current Session Highlight:  London Session Pre-Open Briefing (1 Hr Before Open)

Session News Focus: Focus heavily on European macroeconomic releases, ECB/BOE news, Forex short-term futures (EUR/USD, GBP/USD), and Gold (XAU/USD) supply/demand zones.

SECTION 0: DAILY MACRO & FINANCIAL NEWS DIGEST

1. Global Macro & Central Banks

- The European Central Bank (ECB) is widely expected to raise its deposit rate by 25 basis points to 2.50% on September 10, 2026, driven by elevated eurozone inflation, which accelerated to 3.3% in August. Economists generally anticipate this hike to mark the conclusion of the current tightening cycle, with the rate stabilizing at 2.50% through the end of 2027.
- The Bank of England's (BOE) base rate, currently at 3.75%, remains a significant factor influencing GBP/USD dynamics.
- In the US, strong August employment figures, with 162,000 new jobs, have increased market expectations for a Federal Reserve rate hike in September. Traders are closely monitoring the upcoming US CPI data on September 11, which will be crucial for the Fed's monetary policy outlook.
- Global inflationary pressures, partly fueled by rising energy costs, persist as a key concern for central banks worldwide.

2. US & European Markets

- European stock markets have displayed mixed performance, with the pan-European STOXX Europe 600 index showing slight gains earlier in September. However, the index declined by 0.1% on September 8, following setbacks in Novartis's clinical trials, which negatively impacted the healthcare sector.
- US equity markets, after a resilient August driven by strong earnings, are bracing for potential volatility in September. This is attributed to a critical Federal Reserve meeting, rising pre-election uncertainties, and the historical tendency for September to be a weaker month for US stocks, with the S&P 500 averaging a -1.1% return.
- Mega-cap technology companies reported robust Q2 earnings, which had previously bolstered market sentiment and led to record highs in US and European markets during August.

3. Indian Markets & Dalal Street

- Indian benchmark indices, Sensex and Nifty, opened in the deep red on September 9, 2026, extending a losing streak from the previous day. The Nifty 50 was trading below 23,550, while the Sensex dropped approximately 478 points.
- This market downturn is primarily linked to elevated crude oil prices nearing \$100 per barrel, rising US bond yields, and persistent selling by Foreign Institutional Investors (FIIs). FIIs were net sellers on September 8, although Domestic Institutional Investors (DIIs) provided some support through buying.
- Sectors such as pharmaceuticals, Fast-Moving Consumer Goods (FMCG), and energy demonstrated relative resilience amidst the broader market weakness, with defence stocks also moving against the trend. Technical levels for Nifty 50 indicate support around 23,600 and immediate resistance at 23,800-24,000.

4. Commodities & Crypto Wire

- Crude oil prices, with Brent trading near \$100 per barrel, are a major market driver due to escalating geopolitical tensions between the US and Iran and disruptions in the Strait of Hormuz, raising global energy supply concerns.
- OPEC+ announced on September 6, 2026, its decision to maintain crude oil production levels for October at September's quotas, following the completion of the phased rollback of 2023 voluntary cuts. However, a separate layer of approximately 2 million barrels per day in cuts remains in place through year-end.
- Gold prices are projected to climb to \$4,900 per ounce by the end of 2026, supported by robust demand from central banks diversifying their reserves and a scaling back of expectations for US interest rate hikes. Central banks purchased 289 tonnes of gold in Q2 2026, with Goldman Sachs forecasting an average of 50 tonnes per month for the year.
- In the cryptocurrency sector, the US SEC has proposed "Regulation Crypto Assets," a new framework designed to provide clarity for crypto investment contracts, which is currently open for public comment. Additionally, the Digital Asset Market Clarity Act, aimed at defining federal oversight for digital assets, is scheduled for a procedural vote in the Senate on September 15.
