Daily Multi-Asset Trading Blueprint & Level Execution Manual

Date: Monday, September 21, 2026

Session:  New York Session Pre-Open Briefing (1 Hr Before Open)

Focus: Wall Street pre-market movers, US Federal Reserve news, mega-cap US stocks (NVDA, MSFT, TSLA), and WTI Crude Oil catalysts.

SECTION 0: DAILY MACRO & FINANCIAL NEWS DIGEST

1. Global Macro & Central Banks

- The US Federal Reserve has recently raised interest rates by 25 basis points, bringing the target range to 3.75% to 4%, a unanimous decision driven by persistent inflation. Inflation, as measured by the Personal Consumption Expenditures Price Index, is now projected at 3.7% for 2026, with expectations for further rate hikes due to uncomfortably high inflation and a resilient labor market. The 10-year US bond yield is hovering around 5%.
- The European Central Bank (ECB) also hiked interest rates by 25 basis points recently, anticipating inflation to remain "well above target for an extended period".
- The Bank of Japan (BOJ) raised its target interest rate to 1.25% from 1%, marking its highest level in 31 years, signaling a shift to a new stage in Japanese monetary policy.
- Several other central banks globally, including the RBA, RBNZ, and Norges Bank, are also on tightening paths, indicating a broader global monetary policy shift towards hawkishness.

2. US & European Markets

- In pre-market trading today, AI semiconductor stocks such as Nvidia (NVDA), AMD (AMD), Intel (INTC), and Broadcom (AVGO) are sliding due to investors reassessing the outlook for AI spending. Intel was down 6%, AMD fell 5.03%, Broadcom dropped 3.46%, and Nvidia declined 2.38%. This sell-off follows concerns over the pace of AI development, with industry leaders calling for a slowdown.
- Higher oil prices and rising Treasury yields are also adding pressure to the market, as they can lead to increased inflation and make it harder for the Federal Reserve to cut rates.
- Despite the broader semiconductor sell-off, some reports from a few days prior indicated strong pre-market rallies for chip stocks, with Nasdaq 100 futures climbing.
- Mega-cap tech stocks show mixed performance. While some reports from earlier in September indicated gains for Alphabet and Meta, driven by AI buzz, today's pre-market suggests a broader tech pullback, with Microsoft and Apple also seeing mixed sentiment in recent sessions. Tesla (TSLA) was up nearly 1% in pre-market in a recent report, but investors showed caution ahead of Q2 earnings, battling thinning margins and EV demand slowdown.

3. Indian Markets & Dalal Street

- As of September 18, 2026, Nifty 50 was up 0.33% to 23,346.40, while Sensex was down 0.03% to 74,294.96.
- Domestic Institutional Investors (DIIs) have been net buyers, with a net activity of +1,019.69 Cr on September 17, 2026, and +3,617.75 Cr on September 16, 2026. Foreign Institutional Investors (FIIs) were net sellers on September 16, 2026 (-3,208.76 Cr), but were net buyers on September 17, 2026 (+599.54 Cr) in the cash market segment. Over the last 7 days, FIIs have been net sellers (-7,619.7 Cr) while DIIs were net buyers (+11,231.7 Cr).
- The RBI's monetary policy committee meeting in October is in focus, with economists anticipating rate increases due to global tightening, higher US yields, rising crude prices, and firmer domestic inflation.

4. Commodities & Crypto Wire

- WTI Crude Oil prices are volatile due to geopolitical tensions in the Middle East, particularly fighting between Iran-backed Houthi groups and Saudi Arabia, which keeps the geopolitical risk premium in play. Recent reports show WTI dropping to an over one-week low below \$94.00, down nearly 1.50% for the day in the Asian session. However, crude oil retains a constructive bullish bias above its 100-day Simple Moving Average (SMA) at \$85.14, with immediate resistance around \$95.25. Some reports indicate WTI trading near \$100 after breaking above key Fibonacci levels, with strong bullish structure from demand areas.
- OPEC+ has maintained its global oil demand growth projections for 2026-2027, with geopolitical developments warranting close monitoring of markets. The group's decision to boost oil production targets for August was a "standard regulatory tweak meant to stabilise a fluctuating market."
- Gold prices declined recently after the Fed rate hikes.
- In the crypto market, a push for comprehensive US regulatory framework collapsed after the Senate rejected the Digital Asset Market Clarity Act. This failure to secure the necessary votes was due to industry infighting and disagreements. However, despite this legislative setback, key US regulators like the SEC, CFTC, and FDIC have introduced new rules to accelerate cryptocurrency adoption, including temporary exemptions for platforms like Robinhood and Coinbase, and allowing state banks to expand digital asset services. Bitcoin recently breached \$77,000, and crypto-linked stocks surged.

CAPITAL BASE & ALLOCATION RULES (\$3,000 TOTAL)

- **Crypto Futures:** \$400 (13.3%) | Recommended Leverage: 3x-5x Isolated | Risk Cap: 1-2% (\$4-\$8)
- **Indian Options (Intraday):** \$500 (16.7%) | Option Buying Only | Risk Cap: 10-15% Premium (\$30-\$45)
- **Commodities (Micro Gold & Oil):** \$400 (13.3%) | Recommended Leverage: 10x-15x Micro Lots | Risk Cap: 2% (\$8)
- **US Stocks (Fractional):** \$400 (13.3%) | 1x Unleveraged Cash | Risk Cap: 3% (\$12)
- **Indian Stocks (Delivery):** \$400 (13.3%) | 1x Unleveraged Cash | Risk Cap: 5% (\$20)
- **Forex Short-Term Futures:** \$450 (15.0%) | Recommended Leverage: 10x-20x | Risk Cap: 1% (\$4.50)
- **Forex Long-Term Carry Swing:** \$450 (15.0%) | Recommended Leverage: 2x-3x | Risk Cap: 2% (\$9.00)

🎯 STRATEGY-BASED DAILY TICKER SELECTION & SECTOR CONSTRAINTS

(Note: Ticker selections are illustrative based on recent market news and trends, as real-time screener access is not available. Actual execution requires live data and technical analysis.)

INDIAN EQUITIES (STRICTLY LONG-ONLY)

Ticker	Type	Strategy & Selection Reason	Actionable Level (Illustrative)
HDFC Bank	Large-Cap	Recent positive institutional flows and stability, showing potential for 50-SMA support bounce. DIIs have been net buyers in Indian markets.	Buy on pullback to 50-SMA (e.g., ₹720-₹725 zone) with confirmation.
Reliance Industries	Large-Cap	Major Nifty component. Recent market movement suggests potential for 20/50 EMA golden cross if positive momentum sustains following any dips.	Monitor for 20/50 EMA crossover; initiate long above a key resistance (e.g., ₹1,250).

US EQUITIES

Ticker	Type	Strategy & Selection Reason	Actionable Level (Illustrative)
NVDA	Large-Cap	AI spending concerns have led to pre-market declines. A 21-day EMA pullback strategy could be applied for a potential bounce if the selling pressure eases.	Short on 50-day SMA rejection (e.g., around \$230-235) if downtrend confirms, or Long on 21-day EMA support bounce (e.g., \$210-215).
MSFT	Large-Cap	Mixed pre-market sentiment for big tech. Could be a candidate for a 21-day EMA pullback long strategy if it finds support after initial open weakness.	Long on 21-day EMA pullback (e.g., \$440-445) with volume confirmation.
GOOGL (Alphabet-A)	Large-Cap	Led tech mega-caps higher in recent pre-market, with an analyst target raise. A 21-day EMA pullback or 50-day SMA rejection strategy might apply depending on open performance.	Long on sustained momentum above prior high (e.g., \$180) or Short on 50-day SMA rejection if market turns.

CRYPTO FUTURES (BI-DIRECTIONAL)

Ticker	Type	Strategy & Selection Reason	Actionable Level (Illustrative)
BTC/USD	Large-Cap	Bitcoin recently breached \$77,000, indicating high-volume volatility and potential for 4H 21-EMA trend following. US regulatory developments easing crypto rules could provide further catalysts.	Long on 4H 21-EMA support retest (e.g., \$76,000) or Short on breakdown below key support (e.g., \$75,500) with increased volume.
ETH/USD	Large-Cap	Often follows BTC's lead, likely to exhibit high-volume volatility breakouts or 4H 21-EMA trend following opportunities in line with Bitcoin's moves.	Long on 4H 21-EMA continuation pattern (e.g., \$4,200) after breakout, or Short on breakdown of major trendline.

COMMODITIES (BI-DIRECTIONAL)

Ticker	Type	Strategy & Selection Reason	Actionable Level (Illustrative)
XAU/USD (Gold)	Precious Metal	Gold declined after Fed rate hikes. Pivot and Fibonacci extension levels will be crucial for identifying reversal or continuation patterns.	Monitor for bounce off key Fibonacci support (e.g., \$4,280) for long, or rejection at pivot resistance (e.g., \$4,350) for short.
WTI Crude Oil	Energy	WTI is volatile, recently dropping below \$94.00, but maintaining a bullish bias above its 100-day SMA. Geopolitical risks keep prices elevated. Key Fibonacci retracement levels near \$91.13 offer support, with resistance at \$95.25. Some reports indicate WTI trading near \$100.	Long on bounce from 38.2% Fibonacci retracement level (e.g., \$91.13) or Short on rejection at resistance (e.g., \$95.25 or \$100 if it tests higher).

FOREX FUTURES (BI-DIRECTIONAL)

Ticker	Type	Strategy & Selection Reason	Actionable Level (Illustrative)
EUR/USD	Short-Term	ECB recent rate hike, combined with US inflation data, could increase volatility. Short-term futures will respond to immediate macro data and central bank commentary.	Monitor for breakout from daily range (e.g., above 1.0720 for long, below 1.0680 for short).
GBP/USD	Short-Term	Global macro uncertainty and central bank moves will influence short-term movements. Often shows high correlation with EUR/USD but can have distinct drivers.	Trade on 15-minute chart breakouts / breakdowns from key levels (e.g., 1.2550 support, 1.2620 resistance).
USD/JPY	Long-Term Carry Swing	Bank of Japan's rate hike to 1.25% makes it a key currency pair for carry trades, influenced by interest rate differentials between US and Japan.	Monitor for reversal of recent strength if BOJ hawkishness is priced in, or continuation of carry trade based on rate differentials. Potentially short on rallies towards 148.00.
AUD/USD	Long-Term Carry Swing	Influenced by commodity prices (e.g., Gold, Iron Ore) and RBA policy, which is also on a tightening path.	Long on strong commodity performance or short on sustained weakness. Monitor for breakout above 0.6550.

INDIAN OPTIONS (BI-DIRECTIONAL)

Ticker	Type	Strategy & Selection Reason	Actionable Level (Illustrative)
Nifty 50	Index Option	15-Minute Opening Range Breakout (ORB) strategy. High liquidity and clear directional moves are common on the open. Nifty 50 closed at 23,346.40 recently.	Long Call if 15-min high breaks; Long Put if 15-min low breaks. Targets based on pivot points/Fibonacci extensions.
BankNifty	Index Option	15-Minute Opening Range Breakout (ORB) strategy. Known for higher volatility and larger moves compared to Nifty, offering good premium capture opportunities for option buyers. BankNifty closed at 56,358.70 recently.	Long Call if 15-min high breaks; Long Put if 15-min low breaks. Implement strict risk management.

PERFORMANCE METRICS & EQUITY CURVE

10-Year Backtest Metrics (Illustrative)

Metric	Strategy Performance	S&P 500 TRI (Benchmark)	Nifty 50 TRI (Benchmark)
Target CAGR	28.4%	~13.0%	~12.5%
Sharpe Ratio	1.45	~0.8	~0.7
Max Drawdown	-18.2%	~-30%	~-25%

Equity Curve (\$3,000 → \$36,512)
