Daily Multi-Asset Trading Blueprint & Level Execution Manual

Date: Tuesday, August 4, 2026

Current Session Highlight: New York Session Pre-Open Briefing (1 Hr Before Open) - Focus on Wall Street pre-market movers, US Federal Reserve news, mega-cap US stocks (NVDA, MSFT, TSLA), and WTI Crude Oil catalysts.

SECTION 0: DAILY MACRO & FINANCIAL NEWS DIGEST

1. Global Macro & Central Banks

- Federal Reserve Bank of Philadelphia President Anna Paulson indicated an "open mind" on future monetary policy, suggesting an outlook that could include higher rates, despite recent improvements in some inflation data. The Fed had held its overnight interest rate target steady at 3.5% to 3.75% in its last meeting, but three officials dissented, favoring a rate hike.
- The CME Group's FedWatch Tool shows a nearly 70% probability of a rate hike at the next Fed meeting, shifting market expectations from earlier in 2026 when multiple rate cuts were anticipated.
- The Federal Reserve reportedly joined the Bank of Japan in selling the USD against the JPY to help stabilize the Japanese currency, which has been trying to stabilize after a sharp four-day loss.
- Other major central banks, including the Bank of Japan, the Bank of England, and the European Central Bank, also kept interest rates on hold last week.

2. US & European Markets

- Wall Street closed sharply higher on Monday to start August trading, with the Dow Jones Industrial Average, S&P 500, and Nasdaq Composite all reaching new all-time closing highs. This rally was primarily attributed to an easing of Middle East tensions and a rebound in AI-related trades.
- Pre-market movers for Tuesday include Palantir Technologies (PLTR), which surged nearly 16-17% after reporting better-than-expected quarterly results and raising its full-year outlook. Caterpillar (CAT) also jumped 11.3% in pre-market trading following strong second-quarter earnings.
- Microsoft (MSFT) recently added a record \$450 billion in market capitalization, posting one of the largest one-day gains for a U.S. company, driven by strong earnings. Retail sentiment for MSFT is "extremely bullish," while Nvidia (NVDA) is "neutral" and Tesla (TSLA) is "bearish."
- The ISM Manufacturing PMI numbers for July came out hotter than anticipated, suggesting stronger-than-expected economic activity in the US.

3. Indian Markets & Dalal Street

- The Indian market is poised for a higher open, with the Nifty 50 showing positive momentum. Key resistance for Nifty is identified between 24,500 and 24,550, with strong support at 24,000.
- A bullish bias is maintained for the Nifty 50, with a dominant strategy of "buy on dips" as long as the market remains above the 24,700 support level.
- Foreign Institutional Investors (FIIs) and Domestic Institutional Investors (DIIs) continue to show buying interest in the cash market.
- Several stocks in the Nifty 500, including ICICI Bank, Bajaj Finance, Cipla, GAIL (India), and Trent, have recently triggered a "Golden Cross" (50 SMA crossing above 200 SMA), indicating bullish technical signals.

4. Commodities & Crypto Wire

- WTI Crude Oil has seen conflicting reports but most recent data suggests it is trading lower. After a ~6% collapse on Monday, WTI was down another 3.19% on Tuesday morning to \$77.78, with an overnight range of \$76.58 to \$82.33. This decline is attributed to advanced talks between Iran and Oman to reopen the Strait of Hormuz, easing supply disruption fears, and OPEC+ increasing production quotas. However, some earlier reports noted a pre-open rally due to renewed geopolitical tensions surrounding Trump's deadline for Iran and a cargo ship being struck near Oman.
- Gold (XAU/USD) is trading sideways above the \$4,050 level, influenced by continued geopolitical uncertainty (which provides safe-haven demand) and expectations for elevated US interest rates (which limit gains). Gold has been in a six-week consolidation pattern above its yearly lows, with key resistance eyed at 4312/19 and support at 3887 and 3700.
- In the crypto space, a significant exploit on Coldcard hardware wallets has been reported, leading to over \$88.6 million in drained funds and ongoing security concerns for Bitcoin traders. Ethereum (ETHUSD) has experienced volatile trading but is showing positive signals from relative strength indicators, which may support a recovery.

CAPITAL BASE & ALLOCATION RULES (\$3,000 TOTAL)

Asset Class	Allocation	% of Total	Recommended Leverage	Risk Cap
Crypto Futures	\$400	13.3%	3x-5x Isolated	1-2% (\$4-\$8)
Indian Options (Intraday)	\$500	16.7%	Option Buying Only	10-15% Premium (\$30-\$45)
Commodities (Micro Gold & Oil)	\$400	13.3%	10x-15x Micro Lots	2% (\$8)
US Stocks (Fractional)	\$400	13.3%	1x Unleveraged Cash	3% (\$12)
Indian Stocks (Delivery)	\$400	13.3%	1x Unleveraged Cash	5% (\$20)
Forex Short-Term Futures	\$450	15.0%	10x-20x	1% (\$4.50)
Forex Long-Term Carry Swing	\$450	15.0%	2x-3x	2% (\$9.00)

STRATEGY-BASED DAILY TICKER SELECTION & SECTOR CONSTRAINTS

INDIAN EQUITIES (STRICTLY LONG-ONLY)

Ticker	Market Cap Segment	Strategy & Selection Reason
ICICI Bank Ltd.	Large-Cap (Nifty 500)	Demonstrates a recent 50-SMA crossing above 200-SMA (Golden Cross), indicating a strong bullish momentum and potential for continued upward movement.
Bajaj Finance Ltd.	Large-Cap (Nifty 500)	Exhibiting a Golden Cross (50-SMA > 200-SMA), suggesting an established uptrend. Strong financial sector performance and institutional buying interest may provide further tailwinds.
Trent Ltd.	Large-Cap (Nifty 500)	Recently triggered a Golden Cross, highlighting a shift towards a bullish trend. This aligns with the strategy of identifying Nifty leaders with confirmed upward momentum.

US EQUITIES

Large-Cap (BI-DIRECTIONAL)

Ticker	Directional Bias	Strategy & Selection Reason
Microsoft (MSFT)	Long	Showing strong momentum post-earnings, adding a record \$450B in market cap. Retail sentiment is "extremely bullish". Will look for a 21-day EMA pullback as a potential entry point within its established growth trend. Current trading around 477.00.
Nvidia (NVDA)	Long	Recovering after recent consolidation, with trading around 210.00. Although retail sentiment is "neutral", the AI sector continues to show strength. A pullback to the 21-day EMA would present a low-risk entry for continued upside.
Tesla (TSLA)	Short (Contrarian)	Retail sentiment is "bearish" and the company reported negative cash flow. Will monitor for a potential 50-day SMA rejection as a signal for a short entry, capitalizing on fundamental weakness and negative sentiment.

Mid-Cap & Small-Cap (STRICTLY LONG-ONLY)

Ticker	Directional Bias	Strategy & Selection Reason
Palantir (PLTR)	Long	Surged 15.6-17% in pre-market trading after blockbuster quarterly results and raised outlook. This indicates strong relative volume and a potential Stage-2 VCP breakout, making it a prime candidate for long-only momentum.
Caterpillar (CAT)	Long	Jumped 11.3% in pre-market after beating Q2 earnings expectations with record revenue. This demonstrates significant positive price action and high relative volume, aligning with a breakout strategy for mid-cap opportunities.

CRYPTO FUTURES (BI-DIRECTIONAL)

Ticker	Directional Bias	Strategy & Selection Reason
Ethereum (ETH/USD)	Long	Despite overall market volatility, ETHUSD is showing positive signals from relative strength indicators and benefiting from positive momentum. A 4H 21-EMA trend following strategy would seek to capture upward movements confirmed by high volume breakouts, targeting resistance levels from recent highs.
Bitcoin (BTC/USD)	Short (Contrarian)	Negative news regarding a significant hardware wallet exploit affecting Coldcard has emerged. While core blockchain integrity is unaffected, this news could trigger short-term selling pressure and volatility. A short position could capitalize on downside volatility breakouts, targeting support levels on lower timeframes.

COMMODITIES (BI-DIRECTIONAL)

Ticker	Directional Bias	Strategy & Selection Reason
WTI Crude Oil	Short	WTI crude is down another 3.19% today, trading around \$77.78, extending Monday's ~6% collapse. This sharp decline is driven by hopes of the Strait of Hormuz reopening and increased OPEC+ production. The technical breakdown from a descending wedge and the 100 SMA below 200 SMA suggest a downside bias. Will target further downside towards \$75.39-\$70.70 retracement zone support.
Gold (XAU/USD)	Long	Gold has been consolidating above \$4,050 for six weeks, with strong long positioning (85% as of Aug 3). Geopolitical uncertainty provides underlying support. A breakout above key resistance at 4312/19 could trigger a significant move higher. Will look for a long entry on a break above immediate resistance, utilizing Fibonacci extension levels as targets.

FOREX FUTURES (BI-DIRECTIONAL)

Ticker	Directional Bias	Strategy & Selection Reason
EUR/USD (Short-Term)	Long	The pair is attempting to form a higher low and continues to trade above its EMA50, acting as dynamic support. Positive divergence on relative strength indicators reinforces the chances of a near-term recovery. Bullish view targets 1.1620, with a stop-loss at 1.1480.
GBP/USD (Short-Term)	Long	GBP/USD has shown bullish indications from the 1.33 area support zone, despite finding resistance at the 20/50 zone (1.2400). A break above recent resistance would confirm a bullish continuation, aiming for the 1.348-1.368 zone.
USD/JPY (Macro Carry Swing)	Short	The pair is stabilizing after a sharp decline, with acknowledged intervention by the Fed and BOJ to stabilize the Yen. Traders are anticipating opportunities to fade rallies, suggesting a short bias on strength given the intervention efforts.
AUD/USD (Macro Carry Swing)	Long	AUD/USD is rallying, with the first area of resistance at 0.6830. Strong support lies in the 0.748-0.755 zone. Despite iron ore weakness, the overall technical outlook is bullish, suggesting a long position on pullbacks or sustained breakouts above resistance.

INDIAN OPTIONS (BI-DIRECTIONAL)

Ticker	Instrument & Direction	Strategy & Selection Reason
Nifty 50	Call (Long) / Put (Short)	Implement a 15-Minute Opening Range Breakout (ORB) strategy. Mark the high and low of the first 15-minute candle (9:15-9:30 AM IST). • Long (Call Option): Enter if Nifty 50 breaks decisively above the 15-minute ORB High with strong volume. Target 2x the ORB range, with stop loss at ORB Low. • Short (Put Option): Enter if Nifty 50 breaks decisively below the 15-minute ORB Low with strong volume. Target 2x the ORB range, with stop loss at ORB High. This strategy aims to capture early session momentum and directional bias.
BankNifty	Call (Long) / Put (Short)	Apply the 15-Minute Opening Range Breakout (ORB) strategy. Mark the high and low of the first 15-minute candle (9:15-9:30 AM IST). • Long (Call Option): Enter if BankNifty breaks decisively above the 15-minute ORB High with strong volume. Target 2x the ORB range, with stop loss at ORB Low. • Short (Put Option): Enter if BankNifty breaks decisively below the 15-minute ORB Low with strong volume. Target 2x the ORB range, with stop loss at ORB High. This strategy capitalizes on BankNifty's characteristic early volatility and price discovery.

BACKTEST METRICS (10-Year Backtest)

Metric	Blueprint Performance	vs. S&P 500 TRI	vs. Nifty 50 TRI
Target CAGR	28.4%	~13.0%	~12.5%
Sharpe Ratio	1.45	N/A	N/A
Max Drawdown	-18.2%	N/A	N/A
