CURRENT SESSION HIGHLIGHT: New York Session Pre-Open Briefing (1 Hr Before Open)

SESSION NEWS FOCUS: Wall Street pre-market movers, US Federal Reserve news, mega-cap US stocks (NVDA, MSFT, TSLA), and WTI Crude Oil catalysts.

SECTION 0: DAILY MACRO & FINANCIAL NEWS DIGEST

1. Global Macro & Central Banks

- US consumer inflation data for July came in as expected at 3.4% year-over-year, easing concerns about immediate Federal Reserve interest rate hikes. This has led to a reduction in market expectations for a September rate hike from 54% a week ago to 40% today.
- The Norges Bank is expected to keep its policy rate unchanged at 4.25% today, with recent core inflation prints (2.7% Y/Y in June and July) supporting a hold, making it harder for hawkish members to push for a hike.
- Japan's corporate goods prices continued to rise at an elevated pace in July (7.2% Y/Y), increasing cost pressure on businesses and keeping the Bank of Japan on track for potential rate hikes.
- The Australian dollar held broadly against the greenback at \$0.7062 after Reserve Bank of Australia Assistant Governor Christopher Kent noted that earlier cash rate increases are having their intended effects.

2. US & European Markets

- US stock futures were mixed on Thursday morning, with the S&P 500 futures up 0.03% and Dow Jones futures down 0.07%. The Nasdaq Composite ended 0.54% higher overnight, reflecting a rebound in technology shares.
- Asian markets advanced on Thursday as technology shares rebounded, and in-line US inflation data eased worries about monetary tightening.
- Pre-market movers saw OFAL (OFA Group) up over 260%, Rocky Mountain Chocolate Factory (RMCF) up over 150%, and ChowChow Cloud Intl (CHOW) up over 80%.
- The Federal Reserve is signaling a simpler communications strategy, potentially dropping forward guidance and shortening FOMC statements, focusing more on current economic conditions. This shift could lead to increased market volatility around key data releases.
- Mega-cap US stocks like NVDA and MSFT might see some bullish momentum follow-through from the tech rebound. Tesla (TSLA) related news was not prominent, but it would be influenced by broader market sentiment.

3. Indian Markets & Dalal Street

- Indian benchmark indices, Sensex and Nifty 50, are expected to open lower on Thursday amidst mixed global cues and persistent concerns over elevated crude oil prices.
- The GIFT Nifty indicated a dismal start for the Nifty50, trading lower by 26 points at 24,447.50.
- On Wednesday, the Nifty 50 closed below the key resistance level of 24,500. However, buying interest emerged at lower levels, particularly around the 20-day exponential moving average (EMA), suggesting a potential recovery if it sustains above 24,473.
- The Indian rupee opened slightly weaker at 95.36 to the dollar.
- Several companies, including UltraTech Cement, Tata Motors PV, Axis Bank, and Apollo Hospitals, are expected to be in focus due to corporate developments and first-quarter earnings.
- Central Bank of India mobilized \$250 million under the RBI's FCNR-B window, surpassing its internal target.

4. Commodities & Crypto Wire

- Gold (XAU/USD) is holding firm above \$4,400 an ounce, hovering near ten-week highs, benefiting from tame US consumer inflation data that reduced pressure on the Fed to raise interest rates. Gold is trading around \$4,408.79.
- WTI Crude Oil prices fell by over \$1 on Thursday, dipping below \$82 per barrel (\$81.97). This decline is attributed to lower global oil demand forecasts for 2026 by OPEC+ and IEA, and a sharp, unexpected build in US crude inventories, despite ongoing supply risks from the US-Iran conflict.
- Bitcoin (BTC) is trading around \$63,361.60, experiencing a minor pullback despite softening US inflation. It remains above short-term and long-term moving averages on the 4-hour chart.
- Ethereum (ETH) also saw a 2% increase to \$1,890.89 on Wednesday, outperforming Bitcoin, on supportive macro catalysts from cooler US inflation data.
- Uncertainty continues over the reopening of the Strait of Hormuz, with little progress in negotiations between the US and Iran, which could still limit crude oil declines.
