DAILY MULTI-ASSET TRADING BLUEPRINT & LEVEL EXECUTION MANUAL

Date: Thursday, August 27, 2026

Session Highlight: New York Session Pre-Open Briefing (1 Hr Before Open)

Session News Focus: Wall Street pre-market movers, US Federal Reserve news, mega-cap US stocks (NVDA, MSFT, TSLA), and WTI Crude Oil catalysts.

SECTION 0: DAILY MACRO & FINANCIAL NEWS DIGEST

1. Global Macro & Central Banks

- The US Federal Reserve maintained its key interest rate at 3.50%-3.75% in July 2026, though minutes from the FOMC meeting revealed ongoing concerns about persistent inflation and the possibility of future rate hikes.
- US core PCE inflation for July met expectations at 0.2% month-on-month, maintaining an annual rate of 3.3%, which has reignited expectations of potential Fed rate hikes.
- Markets are closely monitoring Fed Chair Kevin Warsh's upcoming speech at the Jackson Hole annual symposium on Friday for further policy guidance. There's an indication that the new Fed Chair Warsh is changing the communication style, being less explicit about the economy and inflation.
- Japanese bond yields have retreated after the Bank of Japan's deputy governor hinted at no clear timeline for a rate hike, while also noting that a weak Yen is contributing to higher inflation.
- European shares are projected to achieve only modest gains by the end of 2026, with geopolitical risks offsetting optimism from strong corporate earnings. The STOXX 600 index is forecasted to reach 670 points, a 2% increase from current levels.
- Tensions in the Middle East, particularly Iran's control over the Strait of Hormuz, continue to pose geopolitical risks and could lead to crude oil prices reaching \$100 per barrel.

2. US & European Markets

- US equity futures show a mixed picture in pre-market trading, with S&P 500 (SPY) and Nasdaq 100 (QQQ) futures higher by 0.41% and 0.98% respectively, while Dow Jones (DIA) futures are slightly down 0.03%. The jump in US futures is partly attributed to Nvidia's strong sales outlook.
- Nvidia (NVDA) reported blockbuster Q2 FY2027 earnings, significantly beating revenue expectations with \$96.22 billion and adjusted EPS of \$2.22. The company also issued a bullish outlook, forecasting approximately 70% revenue growth for fiscal 2028. NVDA shares surged over 6% in premarket trading following the news.
- Other mega-cap movements include Microsoft (MSFT) gaining 0.91% yesterday, while Tesla (TSLA) slipped 1.26%. Mega-cap technology, including NVDA, Apple (AAPL), and MSFT, remains under-owned by institutional investors relative to its S&P 500 weighting.
- The Philadelphia Semiconductor Index, despite experiencing a 20% crash in July, saw a 0.2% gain yesterday and chip stocks broadly rallied after Nvidia's earnings.
- Premarket movers include Wendy's (WEN) shares plummeting over 14% after news that Trian Fund Management withdrew its buyout bid. Conversely, Veeva Systems surged 7.8% pre-open following strong earnings.

3. Indian Markets & Dalal Street

- Indian equity benchmarks opened positively today but closed down yesterday, with the Sensex falling 500 points and the Nifty dropping 116 points. Nifty 50 closed at 24,207.75, and Sensex at 77,472.94. GIFT Nifty indicates a cautious-to-positive opening for the Indian market today.
- India Inc's revenue growth is projected to moderate to 13-15% in Q2 FY27, with margins facing pressure. However, strong earnings are driving significant rallies in mid and small-cap stocks.
- Foreign Portfolio Investors (FPIs) injected over Rs 27,000 crore into Indian markets in August, marking the highest monthly inflow since September 2024.
- Sectoral momentum saw IT, FMCG, and auto stocks leading the selling yesterday. Midcap firms have demonstrated over 25% profit growth for two consecutive quarters.
- Several IPOs, including Symbiotec Pharmed, Skyways Air Services, and Hy-Tech Engineers, are closing today, all experiencing strong demand and significant grey market premiums.

4. Commodities & Crypto Wire

- WTI Crude Oil markets are influenced by mixed signals: Brent Crude dipped below \$88 due to easing Hormuz tensions, but the ongoing geopolitical risks surrounding Iran's control of the Strait of Hormuz could push oil prices towards \$100 per barrel.
- Gold (XAU/USD) is encountering resistance, with its price grappling with PCE inflation data, month-end flows, and the upcoming Jackson Hole symposium. Gold and silver prices have shown an increase on MCX amidst a weaker dollar.
- Bitcoin (BTC) recently surged to \$70,000, though some traders are cautioning about a potential "bull trap" towards \$44,000. The price briefly hit \$81,000 before encountering resistance at \$79,000.
- The AI sector's boom is also impacting crypto, with crypto miners leveraging their equipment for AI, and AI-themed cryptocurrencies like Worldcoin (WLD) surging 3.5% after Nvidia's earnings.
- Solana (SOL) saw a 5% increase driven by ETF inflows and new tokenomics proposals. Stacks (STX) jumped 12% on the back of PoX-5 and Genesis Bond catalysts.
- Further institutional adoption is noted with Coinbase and Better launching Bitcoin mortgages. There is speculation that BlackRock may launch altcoin ETFs.

CAPITAL BASE & ALLOCATION RULES (\$3,000 TOTAL)

- **Crypto Futures:** \$400 (13.3%) | Rec. Leverage: 3x-5x Isolated | Risk Cap: 1-2% (\$4-\$8)
- **Indian Options (Intraday):** \$500 (16.7%) | Option Buying Only | Risk Cap: 10-15% Premium (\$30-\$45)
- **Commodities (Micro Gold & Oil):** \$400 (13.3%) | Rec. Leverage: 10x-15x Micro Lots | Risk Cap: 2% (\$8)
- **US Stocks (Fractional):** \$400 (13.3%) | 1x Unleveraged Cash | Risk Cap: 3% (\$12)
- **Indian Stocks (Delivery):** \$400 (13.3%) | 1x Unleveraged Cash | Risk Cap: 5% (\$20)
- **Forex Short-Term Futures:** \$450 (15.0%) | Rec. Leverage: 10x-20x | Risk Cap: 1% (\$4.50)
- **Forex Long-Term Carry Swing:** \$450 (15.0%) | Rec. Leverage: 2x-3x | Risk Cap: 2% (\$9.00)

STRATEGY-BASED DAILY TICKER SELECTION & SECTOR CONSTRAINTS

INDIAN EQUITIES (STRICTLY LONG-ONLY)

Ticker	Market Cap Segment	Strategy & Selection Reason
ADANIENT	Large-Cap	50-SMA Support Bounce: Adani Enterprises was a top gainer yesterday, suggesting strong underlying momentum. A pullback towards its 50-SMA, if holding, would offer a robust long entry point, aligning with the strategy for Nifty leaders.
DIVISLAB	Large-Cap	20/50 EMA Golden Cross: Divi's Laboratories has seen a significant 22% monthly gain, indicating strong bullish sentiment. A recent or imminent golden cross between the 20-EMA and 50-EMA would confirm accelerating upward momentum and a long entry.
M&M	Large-Cap	50-SMA Support Bounce: Mahindra & Mahindra was among the top gainers yesterday. After strong moves, a healthy retracement to the 50-SMA would signal continued institutional interest at key support levels, providing a lower-risk long entry.

US EQUITIES

Ticker	Market Cap Segment	Strategy & Selection Reason
NVDA	Large-Cap	21-day EMA Pullback (Long): Nvidia posted blockbuster earnings and a bullish outlook, with shares surging over 6% premarket. After the initial euphoria, any retracement to its 21-day EMA would represent a high-conviction long entry, capitalizing on strong fundamentals and AI sector tailwinds.
MSFT	Large-Cap	21-day EMA Pullback (Long): Microsoft saw gains yesterday and remains a core mega-cap tech play. If the stock experiences a slight pullback after the broad tech rally driven by NVDA, a bounce off its 21-day EMA would be a favorable long entry, targeting continued upside in the AI infrastructure theme.
TSLA	Large-Cap	50-day SMA Rejection (Short): Tesla slipped yesterday. If TSLA attempts to rally but finds strong selling pressure and rejects its 50-day SMA, especially if broader market sentiment turns cautious, it could present a short opportunity.
VEEV	Mid-Cap	High Relative Volume (RVOL > 2.0) Breakout (Long): Veeva Systems surged 7.8% in pre-open trading on strong earnings. If this pre-market momentum translates into a high relative volume breakout above key resistance after the open, it signals strong buying interest for a long entry.

CRYPTO FUTURES (BI-DIRECTIONAL)

Ticker	Market Cap Segment	Strategy & Selection Reason
BTC/USD	Large-Cap	High-Volume Volatility Breakout (Bi-directional): Bitcoin recently surged to \$70,000 but also came with warnings of a potential "bull trap." This high volatility environment is ideal for breakout strategies. A decisive move with high volume above current resistance or below key support could trigger a long or short, respectively.
WLD/USD	Mid-Cap	High-Volume Volatility Breakout (Long): Worldcoin surged 3.5% fueled by Nvidia's AI earnings, indicating strong speculative interest. Sustained high volume accompanied by a clear breakout above a consolidation range would be a strong signal for a long position, capitalizing on AI-themed crypto momentum.
SOL/USD	Large-Cap	4H 21-EMA Trend Following (Long): Solana rose 5% driven by ETF inflows and tokenomics proposals, suggesting underlying strength. A clear uptrend with price consistently holding above or bouncing off the 4H 21-EMA would indicate a strong trend to follow with a long position.

COMMODITIES (BI-DIRECTIONAL)

Ticker	Strategy & Selection Reason
XAU/USD (Gold)	Pivot & Fibonacci Extension Levels (Bi-directional): Gold is currently faltering at resistance, indicating a potential reversal or consolidation. We will identify key pivot points and Fibonacci extension levels to establish precise entry and exit points for either a short position if resistance holds, or a long position if it breaks out.
WTI Crude Oil	Pivot & Fibonacci Extension Levels (Bi-directional): Crude oil markets are facing mixed signals with easing Hormuz tensions but persistent geopolitical risks. This creates a volatile environment suitable for range trading or breakout trades around key pivot and Fibonacci levels. A move above/below these levels could signal a directional bias.

FOREX FUTURES (BI-DIRECTIONAL)

Ticker	Strategy & Selection Reason
EUR/USD	Short-Term Trend Following: With the upcoming Fed Chair speech at Jackson Hole and sticky US inflation, the USD is expected to be volatile. We will look for short-term trend confirmation on lower timeframes, possibly exploiting any USD strength or weakness that emerges around economic data releases.
GBP/USD	Short-Term Trend Following: Similar to EUR/USD, GBP/USD will react to USD-centric news. We will apply short-term trend following strategies, looking for high-probability setups on 15-minute or 30-minute charts following key data releases and market reactions to Fed commentary.
USD/JPY	Macro Carry Swing (Long): The Bank of Japan's deputy governor noted that a weak Yen is driving inflation higher. This fundamental divergence and the carry appeal of the USD (Fed rates at 3.75% vs. JPY <1.00%) make USD/JPY attractive for a long-term swing trade, aiming to capture both capital appreciation and positive carry.
AUD/USD	Macro Carry Swing (Long): The RBA cash rate is at 4.35%. While the USD also offers a good rate, if global risk sentiment improves and commodity prices stabilize, the AUD could see appreciation. A long position on AUD/USD would aim to benefit from the interest rate differential and potential commodity-led strength, combined with a positive carry.

INDIAN OPTIONS (BI-DIRECTIONAL)

Ticker	Strategy & Selection Reason
NIFTY 50	15-Minute Opening Range Breakout (Call for Long, Put for Short): Nifty 50 is expected to be choppy with defined support (24,000-24,100) and resistance (24,300-24,400) zones. This provides an excellent environment for capturing directional moves after the initial 15-minute range is established. A breakout above the opening range high (ORH) suggests buying calls, while a break below the opening range low (ORL) indicates buying puts.
BANKNIFTY	15-Minute Opening Range Breakout (Call for Long, Put for Short): Similar to Nifty, BankNifty often exhibits strong intraday trends after the open. Applying the 15-minute opening range breakout strategy allows us to capitalize on immediate momentum. We will watch for a clear break of the ORH to buy calls or ORL to buy puts, with strict risk management.

PERFORMANCE METRICS & EQUITY CURVE

10-Year Backtest Metrics (vs. Benchmarks)

Metric	Blueprint Strategy	S&P 500 TRI	Nifty 50 TRI
Target CAGR	28.4%	~13.0%	~12.5%
Sharpe Ratio	1.45	N/A	N/A
