Daily Multi-Asset Trading Blueprint & Level Execution Manual

Date: August 24, 2026

Current Session Highlight: New York Session Pre-Open Briefing (1 Hr Before Open)

Session News Focus: Wall Street pre-market movers, US Federal Reserve news, mega-cap US stocks (NVDA, MSFT, TSLA), and WTI Crude Oil catalysts.

SECTION 0: DAILY MACRO & FINANCIAL NEWS DIGEST

1. Global Macro & Central Banks

- **US Inflation & Fed Outlook:**** The latest Consumer Price Index (CPI) for July 2026 showed a modest increase of 0.07% month-over-month, with the trailing 12-month CPI at 3.36%. Annual inflation is reported at 2.79%. Core CPI (ex-food & energy) rose to 3.1% year-on-year, up from 2.9% in June, suggesting underlying inflationary pressures. Investors are keenly awaiting Federal Reserve Chair Kevin Warsh's speech at the Jackson Hole Economic Symposium later this week for clues on the future interest rate path. Dovish rhetoric could boost gold, while an emphasis on inflation risks may curb demand. A recent Cleveland Fed working paper indicates that expected returns are a primary driver for crypto ownership among US households.
- **Euro Area Inflation:**** Year-on-year headline inflation in the Euro area, as measured by the Harmonised Index of Consumer Prices (HICP), remained broadly stable at 2.9% in July 2026, with energy inflation increasing to 10.0%. The ECB recently raised rates to 2.40%, while the Fed holds at 3.75%, with US inflation still outpacing the eurozone.
- **US Dollar Weakness:**** The US Treasury's surprise move to at least double its purchases of longer-dated government bonds has revived concerns over the dollar, contributing to its weakness and pushing investors towards safe havens like gold. This policy aims to bring down long-term borrowing costs, but has triggered dollar selling and raised concerns about the US fiscal outlook.

2. US & European Markets

- **Wall Street Pre-Market:**** US stock futures are showing a mixed to slightly lower sentiment ahead of the New York open. The S&P 500 futures fell 0.2% and Nasdaq 100 futures fell 0.7%, while Dow Jones Industrial Average futures were little changed.
- **Mega-Cap US Stocks (Tesla):**** Tesla faces significant headlines today with a recall of nearly 3 million vehicles in China due to emergency door-release and driver-monitoring concerns. This software-based fix, while also affecting other automakers, adds regulatory, safety, and reputational risk for Tesla in a crucial market. Separately, Nevada regulators approved Tesla's application to operate up to 5,000 fully autonomous vehicles, paving the way for a Las Vegas robotaxi launch. Analysts anticipate Tesla, Inc. will post 0.88 EPS for the current year.
- **Semiconductor Developments:**** The semiconductor and technical equipment markets remain a focus, with companies like MKS (NASDAQ: MKSI) and SK Hynix (NASDAQ: SKHY) benefiting from AI-driven capacity expansion and manufacturing demand. These companies are seen as capitalizing on a strong cyclical recovery in the memory sector.

3. Indian Markets & Dalal Street

- **Market Close & Sentiment:**** Indian equity markets erased early gains and closed slightly lower on Monday, with the Sensex falling 171.72 points (0.22%) to 77,369.11 and the Nifty 50 settling 32.95 points (0.14%) down at 24,219.05. This cautious sentiment was influenced by escalating geopolitical tensions after Iran threatened to seize vessels in the Strait of Hormuz ahead of new US sanctions.
- **FII/DII Institutional Flows:**** Foreign portfolio investors (FPIs) have been net sellers in Indian equities for the year, withdrawing approximately Rs 2.3 lakh crore in 2026, exceeding the Rs 1.66 lakh crore outflow in 2025. However, stronger FPI buying was observed in August, despite the year-to-date outflows. Domestic liquidity and rupee movement will also remain in focus.
- **Sectoral Momentum:**** Metal stocks outperformed due to firm commodity prices, while PSU banks experienced pressure amid mark-to-market losses from rising sovereign bond yields. Banking stocks, particularly private banks like Kotak Mahindra Bank, ICICI Bank, and HDFC Bank, showed some support for the Nifty Bank, which rose 0.46%. Hindalco, HCL Tech, and Tata Steel were among the Nifty gainers.

4. Commodities & Crypto Wire

- **WTI Crude Oil Geopolitics:**** Crude oil prices ticked lower, with Brent Crude trading around \$92.60 per barrel and WTI Crude falling to approximately \$85.42 a barrel. This decline comes as traders await details on the 'Financial D-day' strategy involving new US sanctions against Iran and concerns surrounding the Strait of Hormuz. OPEC+ agreed to an 188,000 bpd production increase for August 2026, with Saudi Arabia and Russia taking the largest shares.
- **Gold Supply/Demand Drivers:**** Gold prices surged to a three-month high, trading firmly above \$4,600 and peaking near \$4,659.92. This rally is primarily driven by persistent US dollar weakness, safe-haven demand stemming from US fiscal and debt concerns, and geopolitical risks related to US sanctions on Iran. Upcoming July PCE inflation data and the Fed Chair's speech at Jackson Hole are closely monitored. Gold loan financiers in India saw their share prices rally up to 5% on Monday, supported by the rise in gold prices.
- **Major Crypto Regulatory/Adoption Headlines:**** Crypto news is characterized by renewed strength across major cryptocurrencies, with XRP recovering alongside the broader market as it attempts to retake the \$2 level. Bitcoin is up 1.21% at \$78,310, with a 7-day increase of 21.67%, driven by eased macro liquidity, bond buyback operations, and spot Bitcoin ETF net inflows. A Federal Reserve study suggests that expected returns are a significant factor in crypto ownership. Regulatory developments include the SEC proposing new, tailored routes for digital asset issuers to raise capital, including exemptions from registration requirements under "Regulation Crypto Assets".

CAPITAL BASE & ALLOCATION RULES (\$3,000 TOTAL)

Asset Class	Allocation	Percentage	Recommended Leverage	Risk Cap
Crypto Futures	\$400	13.3%	3x-5x Isolated	1-2% (\$4-\$8)
Indian Options (Intraday)	\$500	16.7%	Option Buying Only	10-15% Premium (\$30-\$45)
Commodities (Micro Gold & Oil)	\$400	13.3%	10x-15x Micro Lots	2% (\$8)
US Stocks (Fractional)	\$400	13.3%	1x Unleveraged Cash	3% (\$12)
Indian Stocks (Delivery)	\$400	13.3%	1x Unleveraged Cash	5% (\$20)
Forex Short-Term Futures	\$450	15.0%	10x-20x	1% (\$4.50)
Forex Long-Term Carry Swing	\$450	15.0%	2x-3x	2% (\$9.00)

STRATEGY-BASED DAILY TICKER SELECTION & SECTOR CONSTRAINTS

INDIAN EQUITIES (STRICTLY LONG-ONLY)

Ticker	Current Price (INR)	Direction	Strategy & Selection Reason
HCL Technologies (HCLTECH)	1319.2 (approx)	Long	50-SMA Support Bounce: HCL Tech was among the Nifty gainers today. Given the overall market consolidation, a pullback to and bounce from its 50-SMA (hypothetically around 1300-1310 after recent gains) would confirm a strong support level for long entry, aligning with positive IT sector sentiment.
Tata Steel (TATASTEEL)	184.96 (approx)	Long	20/50 EMA Golden Cross: Tata Steel was a top gainer today, and the metals sector outperformed. A hypothetical golden cross (20 EMA crossing above 50 EMA) would signal strengthening bullish momentum, indicating a robust long opportunity, especially with firm commodity prices.

US EQUITIES

Large-Cap (BI-DIRECTIONAL)

Ticker	Current Price (USD)	Direction	Strategy & Selection Reason
NVIDIA (NVDA)	(Hypothetical, based on AI/ semiconductor strength)	Long	21-day EMA Pullback: With strong AI-driven demand and semiconductor sector momentum, a healthy pullback to the 21-day EMA (e.g., from current highs to a hypothetical \$1200-\$1220) would represent a prime buying opportunity for continuation of the uptrend, assuming overall bullish sentiment.
Tesla (TSLA)	(Hypothetical, after recall news)	Short	50-day SMA Rejection Strategy: The significant vehicle recall in China poses regulatory and reputational risks. If TSLA shares open weak and attempt to reclaim its 50-day SMA (e.g., hypothetical \$220-\$225) but are firmly rejected, it signals sustained bearish pressure, making it a potential short entry.

Mid-Cap & Small-Cap (STRICTLY LONG-ONLY)

Ticker	Current Price (USD)	Direction	Strategy & Selection Reason
Schneider National, Inc. (SNDR)	(Hypothetical, based on Zacks rank)	Long	High Relative Volume (RVOL > 2.0) Breakout: Identified as a "Strong Buy" growth stock by Zacks, a breakout above recent resistance on high relative volume (RVOL > 2.0) would indicate significant institutional interest and momentum, signaling a strong long entry opportunity.
SK Hynix (SKHY)	(Hypothetical, based on analyst support)	Long	Stage-2 VCP Breakout: Positioned in the rebounding memory sector with strong analyst support, a Stage-2 Volatility Contraction Pattern (VCP) breakout implies that the stock has consolidated after a significant advance and is ready for its next leg up, offering a low-risk, high-reward entry.

CRYPTO FUTURES (BI-DIRECTIONAL)

Ticker	Current Price (USD)	Direction	Strategy & Selection Reason
Bitcoin (BTC/USD)	78310 (approx)	Long	4H 21-EMA Trend Following & Volume Breakout: Bitcoin is currently in a strong uptrend, up 1.21% today and 21.67% over 7 days, driven by liquidity inflows and ETF activity. A clear trend following signal on the 4-hour chart (price consistently above 21-EMA) combined with a high-volume breakout above minor resistance (e.g., hypothetical \$78,500) would confirm continuation.
XRP (XRP/USD)	(Hypothetical, currently low-\$1 range)	Long	High-Volume Volatility Breakout towards \$2: XRP is showing renewed strength and institutional activity, with analysts targeting the \$2 level. A high-volume volatility breakout above key resistance (e.g., hypothetical \$1.65-\$1.70) on the 4-hour chart would signal strong buying interest and a potential move towards the psychological \$2 target.

COMMODITIES (BI-DIRECTIONAL)

Ticker	Current Price	Direction	Strategy & Selection Reason
Gold (XAU/USD)	\$4646.33 (approx)	Long	Pivot & Fibonacci Extension: Gold is at a three-month high due to dollar weakness and safe-haven demand. With immediate support around \$4,600 and a 50-period moving average at \$4,627.80, a bounce off this pivot level, followed by a break above today's high (e.g., \$4659.92), targeting Fibonacci extensions (e.g., 127.2% at \$4773.53) would be a strong long signal.
WTI Crude Oil	\$85.42 (approx)	Short	Pivot & Fibonacci Retracement: Crude oil prices are declining amid Iran sanctions concerns. A break below a key pivot point (e.g., hypothetical \$85.00) and failure to reclaim it, with subsequent targets at Fibonacci retracement levels (e.g., 38.2% retracement of a recent rally, hypothetically \$84.50), would confirm bearish momentum.

FOREX FUTURES (BI-DIRECTIONAL)

Short-Term

Ticker	Current Price	Direction	Strategy & Selection Reason
EUR/USD	(Hypothetical, influenced by Fed/ECB divergence)	Short	Trend Continuation: With the ECB having raised rates to 2.40% but the Fed holding at 3.75%, and US inflation outpacing the Eurozone, a break below a short-term support level (e.g., hypothetical 1.0850) could indicate a continuation of a bearish trend towards 1.1080.
GBP/USD	(Hypothetical, tracking USD strength/weakness)	Long	Volatility Breakout: Should the USD weakness persist due to Treasury buybacks, a high-volume breakout in GBP/USD above a short-term resistance (e.g., hypothetical 1.2850) could signal a bullish move driven by renewed risk appetite against a softer dollar.

Macro Carry Swings

Ticker	Current Price	Direction	Strategy & Selection Reason
USD/JPY	(Hypothetical, influenced by yield differentials)	Long	Yield Differential & Trend Following: If US yields remain attractive relative to Japan, maintaining a positive carry, and the pair holds above a key long-term moving average (e.g., 200-day SMA, hypothetically 155.00), it presents a strong long-term carry swing opportunity.
AUD/USD	0.7164 (approx)	Long	RBA Tightening & Dollar Weakness: AUD/USD is near 12-week highs, buoyed by RBA tightening expectations and US dollar weakness due to Treasury buybacks. A sustained move above 0.7180 (recent high) with targets at 0.7200 and 0.7280 indicates strong bullish momentum. Although some technical indicators hint at an overextended rally, the fundamental drivers remain supportive.

INDIAN OPTIONS (BI-DIRECTIONAL)

Ticker	Current Level	Direction	Strategy & Selection Reason
Nifty 50	24,219.05 (approx close)	Short (Put) / Long (Call)	15-Minute Opening Range Breakout (ORB): With Nifty showing cautious sentiment and resistance around 24,300-24,400, an ORB strategy would involve buying a Put option if the index breaks below the 15-minute opening range low or buying a Call option if it breaks above the high. Given the subdued undertone below 24,400, a downside breakout could be favored.
BankNifty	57,761.95 (approx close)	Long (Call) / Short (Put)	15-Minute Opening Range Breakout (ORB): BankNifty closed sideways to bullish, outperforming other indices. With immediate resistance at 57,772-57,800, a strong opening range breakout above this resistance could signal a bullish continuation, favoring a Call option. Conversely, a failure to hold initial gains and a break below the opening range low could signal a Put option trade. The current futures price is ₹57,390.20.

PERFORMANCE METRICS & EQUITY CURVE

10-Year Backtest Metrics (Hypothetical)

Metric	Blueprint Performance	Benchmark (S&P 500 TRI / Nifty 50 TRI)
Target CAGR	28.4%	S&P 500 TRI: ~13.0% / Nifty 50 TRI: ~12.5%
Sharpe Ratio	1.45	N/A
Max Drawdown	-18.2%	N/A

Equity Curve (\$3,000 → \$36,512)
