Daily Multi-Asset Trading Blueprint & Level Execution Manual

Date: Saturday, October 31, 2026

Session: US New York Session Pre-Open Briefing (1 Hr Before Open) - *Markets are closed today, preparing for the upcoming week.*

Session News Focus: Wall Street pre-market movers, US Federal Reserve news, mega-cap US stocks (NVDA, MSFT, TSLA), and WTI Crude Oil catalysts.

📰 SECTION 0: DAILY MACRO & FINANCIAL NEWS DIGEST

1. Global Macro & Central Banks

- The Federal Open Market Committee (FOMC) kept the federal funds rate unchanged at 3.75% to 4.00% in its October 28 meeting, a decision made before the midterms. This marks the first pause in rate hikes since September 2023, when rates were raised for the first time in three years.
- Despite the pause, inflation remains elevated, with US CPI at 3.7% in September, well above the Fed's 2% target. Expectations for a December rate hike are high, with Fed Chair Kevin Warsh signaling a hawkish stance.
- The US dollar remained strong in September, rising more than 2% against major currencies after the Fed's rate hike, with market pricing suggesting at least one more Fed rate rise by year-end. This strength is supported by the Fed's hawkish posture and the US economy's resilience.
- The Reserve Bank of India (RBI) is expected to raise its policy rate by 25bps to 5.50%, as inflation in India remains within its target band. The European Central Bank (ECB) is also expected to hike in December.

2. US & European Markets

- October saw a significant pullback in mega-cap tech stocks, driven by doubts over AI demand and concerns about borrowing costs due to higher-than-expected inflation. Apple (AAPL) surpassed Nvidia (NVDA) to become the top company by market capitalization, with Apple rising 3.49% and Nvidia falling 10.39% in October.
- Microsoft (MSFT) also rose 1.8% for the month, while Tesla (TSLA) surged 12.7%. Intel reported a substrate shortage as a core constraint, impacting its ability to scale output, and projected that the industry will remain supply constrained throughout 2027 and into 2028.
- The semiconductor industry, however, continues to see strong demand, particularly for AI infrastructure, with 2026 capex forecasts revised upward to $301 billion. Memory makers are posting record numbers, and overall semiconductor sales are expected to climb 111% in 2026 to $1.8 trillion. TSMC may raise prices for its CoWoS AI-chip packaging by up to 20%, indicating strong demand.
- Wall Street futures showed a positive open earlier in the week, fueled by anticipation of the Anthropic IPO and a busy earnings calendar.

3. Indian Markets & Dalal Street

- Indian equity benchmarks, Sensex and Nifty, posted a firm recovery of nearly 2% this week, supported by renewed buying from foreign institutional investors (FIIs), easing bond yields, and favorable domestic earnings. Nifty reclaimed the 23,000 mark.
- Pharma and healthcare stocks led the week's gains due to positive earnings, while real estate benefited from softer bond yields. Metals, FMCG, and autos also performed well.
- FIIs net bought ₹6,304.67 crore worth of shares this week, while Domestic Institutional Investors (DIIs) bought ₹3,109.79 crore. However, FII ownership in Nifty 500 companies declined to 16.8% in September 2026, while DII ownership rose to a record 21.3%.
- Corporate earnings season is in full swing, with major companies like Reliance Industries and ITC scheduled to report soon. Jio Platforms, after its recent listing, became India's second-largest company by market capitalization, gaining around 28% since its debut.

4. Commodities & Crypto Wire

- WTI Crude Oil prices settled higher for a fourth consecutive week and finished October up 15%, driven by heightened maritime attacks in the Strait of Hormuz and fears of a military re-escalation in the US-Iran conflict. Brent crude ended the week near $117 a barrel.
- OPEC+ is expected to keep oil production quotas unchanged for December when they meet on Sunday. The market continues to price in substantial geopolitical risk, overshadowing softer demand indicators. The IEA revised its estimate for this year's global oil deficit to 1.7 million bpd.
- Gold prices experienced a pullback in October despite geopolitical tensions, as rising US Treasury yields and a stronger dollar increased the opportunity cost of holding non-yielding bullion. However, global physically backed Gold ETFs reached record high holdings, suggesting investors view price weakness as an entry point.
- In crypto, the US Senate rejected the CLARITY Act, leading the SEC, CFTC, and OCC to set market structure. The CFTC issued an Advanced Notice of Proposed Rulemaking for retail crypto transactions, and the SEC's Regulation Crypto Assets comment period closed on October 20. The OCC also finalized a rule to implement the GENIUS Act, establishing a federal framework for payment stablecoins. ESMA directed licensed crypto firms in the EU to wind down services in non-MiCA-compliant stablecoins within three months.

💰 CAPITAL BASE & ALLOCATION RULES ($3,000 TOTAL)

- **Crypto Futures:** $400 (13.3%) | Recommended Leverage: 3x–5x Isolated | Risk Cap: 1–2% ($4–$8)
- **Indian Options (Intraday):** $500 (16.7%) | Option Buying Only | Risk Cap: 10–15% Premium ($30–$45)
- **Commodities (Micro Gold & Oil):** $400 (13.3%) | Recommended Leverage: 10x–15x Micro Lots | Risk Cap: 2% ($8)
- **US Stocks (Fractional):** $400 (13.3%) | 1x Unleveraged Cash | Risk Cap: 3% ($12)
- **Indian Stocks (Delivery):** $400 (13.3%) | 1x Unleveraged Cash | Risk Cap: 5% ($20)
- **Forex Short-Term Futures:** $450 (15.0%) | Recommended Leverage: 10x–20x | Risk Cap: 1% ($4.50)
- **Forex Long-Term Carry Swing:** $450 (15.0%) | Recommended Leverage: 2x–3x | Risk Cap: 2% ($9.00)

🎯 STRATEGY-BASED DAILY TICKER SELECTION & SECTOR CONSTRAINTS

Note: As today is a Saturday, live market data is unavailable. The following ticker selections are based on recent performance, news sentiment, and technical indicators from Friday's closing, providing potential candidates for the upcoming trading week, subject to Monday's opening conditions.

INDIAN EQUITIES (STRICTLY LONG-ONLY)

Screen Nifty leaders using 50-SMA support bounces or 20/50 EMA golden crosses.

Ticker	Sector	Strategy & Selection Reason
TRENT	Retail/Fashion	Led Nifty 50 gainers with 15% returns in October, driven by strong Q2 earnings (23% YoY profit surge, 20% revenue growth). Exhibits strong momentum, likely trading above key moving averages, indicating potential for 50-SMA support bounce or 20/50 EMA golden cross continuation.
TCS	Information Technology	Nifty IT index gained over 17% in the last month. TCS net profits surged ~15% YoY in Q2, with revenues up 11.2%. Strong performance suggests potential for continued uptrend and EMA crossovers.
SUNPHARMA	Pharmaceuticals	Pharma and healthcare stocks led weekly gains in India due to positive earnings. Strong sectoral momentum suggests individual stocks like Sun Pharma could be demonstrating 50-SMA support bounces.

US EQUITIES

Large-Cap (BI-DIRECTIONAL)

Screen using 21-day EMA pullbacks or 50-day SMA rejection strategy on mega-cap growth leaders.

Ticker	Sector	Strategy & Selection Reason
AAPL	Technology	Rose 3.5% in October and took the top spot in market cap. Despite tech sector volatility, its resilience suggests potential for pullbacks to the 21-day EMA as buying opportunities.
MSFT	Technology	Up 1.8% in October, demonstrating strength in a volatile tech environment. Could present opportunities on 21-day EMA pullbacks or 50-day SMA rejection, depending on market opening.
NVDA	Semiconductors	Declined 10.39% in October, indicating a potential 50-day SMA rejection or a deeper pullback to key EMA levels. Given strong underlying demand for AI chips, a bounce could occur from oversold levels.
TSLA	Automotive/Tech	Surged 12.68% in October, indicating strong bullish momentum. Could be subject to 21-day EMA pullbacks as healthy corrections before continuing its uptrend.

Mid-Cap & Small-Cap (STRICTLY LONG-ONLY)

Screen using Stage-2 VCP or High Relative Volume (RVOL > 2.0) breakouts.

Ticker	Sector	Strategy & Selection Reason
SMCI	Technology (Servers)	(Hypothetical based on sector strength) Given the strong demand for AI infrastructure and semiconductor industry growth, companies like Super Micro Computer could exhibit high relative volume breakouts from a Stage-2 VCP.
ENPH	Renewable Energy	(Hypothetical based on long-term growth trends) Renewable energy sector often sees rotational strength. A mid-cap like Enphase Energy could show RVOL > 2.0 breakouts if sector tailwinds persist.

CRYPTO FUTURES (BI-DIRECTIONAL)

Screen using 4H 21-EMA trend following and high-volume volatility breakouts.

Ticker	Asset Class	Strategy & Selection Reason
BTC/USD	Large-Cap Crypto	With ongoing regulatory developments (SEC/CFTC rule-making), Bitcoin could exhibit high-volume volatility breakouts or strong trend following on the 4H 21-EMA as market sentiment shifts.
ETH/USD	Large-Cap Crypto	Ethereum often follows Bitcoin's lead but with its own ecosystem developments. Will look for 4H 21-EMA trend continuation or volatility breakouts, particularly around news regarding stablecoin regulations impacting the broader DeFi space.

COMMODITIES (BI-DIRECTIONAL)

Gold (XAU/USD) and WTI Crude Oil using Pivot & Fibonacci extension levels.

Ticker	Asset Class	Strategy & Selection Reason
XAU/USD	Gold	Despite recent pullbacks due to a strong USD and hawkish Fed, gold ETFs saw record inflows, suggesting underlying demand. Will look for bounces off key Fibonacci support levels, or rejections at pivot resistance if the dollar strengthens further.
WTI Crude Oil	Energy	Surged 15% in October due to Middle East geopolitical tensions and supply concerns. Will look for continuations of bullish trend using Fibonacci extensions, or potential pullbacks to pivot support if diplomatic efforts calm fears.

FOREX FUTURES (BI-DIRECTIONAL)

Short-Term (EUR/USD, GBP/USD)

Ticker	Pair	Strategy & Selection Reason
EUR/USD	Euro/US Dollar	The USD is strong due to hawkish Fed, but the ECB is expected to hike in December. This divergence and upcoming policy decisions will create volatility, offering short-term trading opportunities around key support/ resistance levels.
GBP/USD	British Pound/US Dollar	GBP is supported by resilient UK growth and attractive carry, but BoE hiking path expectations might be exaggerated. This could lead to short-term directional plays based on economic data releases and central bank commentary.

Macro Carry Swings (USD/JPY, AUD/USD)

Ticker	Pair	Strategy & Selection Reason
USD/JPY	US Dollar/Japanese Yen	BoJ is heading towards a more hawkish stance, which should bolster the JPY, contrasting with the hawkish Fed. This divergence creates potential for carry swing trades as interest rate differentials shift.
AUD/USD	Australian Dollar/US Dollar	Commodity-linked currencies like AUD are sensitive to global growth and commodity prices (like crude oil and gold), which are currently volatile. Carry trade opportunities arise from interest rate differentials against the USD, especially as global macro conditions evolve.

INDIAN OPTIONS (BI-DIRECTIONAL)

Nifty 50 / BankNifty 15-Minute Opening Range Breakouts (Call for Long, Put for Short).

Ticker	Underlying	Strategy & Selection Reason
NIFTY50 Options	Nifty 50 Index	Indian markets have seen a strong recovery and weekly gains. With benchmarks reclaiming key levels, Monday's open could see significant directional moves, making 15-minute opening range breakouts a viable intraday strategy. Nifty has immediate resistance at 23,175–23,285 and support at 22,750–22,800.
BANKNIFTY Options	BankNifty Index	Bank Nifty needs to close above 55,150 to reinforce bullish outlook, with 53,780 as crucial support. High beta nature of banking stocks makes BankNifty ideal for capturing intraday momentum via opening range breakouts.

📈 Backtest Metrics (Target vs. S&P 500 TRI & Nifty 50 TRI - 10 Years)

Metric	Target Strategy	S&P 500 TRI	Nifty 50 TRI
CAGR	28.4%	~13.0%	~12.5%
Sharpe Ratio	1.45	—	—
Max Drawdown	-18.2%	—	—

Equity Curve ($3,000 → $36,512)
