Daily Multi-Asset Trading Blueprint & Level Execution Manual

Date: October 26, 2026 (Pre-Open Briefing: 1 Hour Before New York Session Open)

Role: Lead Quantitative Strategist & Institutional Portfolio Manager

📰 SECTION 0: DAILY MACRO & FINANCIAL NEWS DIGEST

1. Global Macro & Central Banks

- The US Federal Reserve is widely anticipated to hold interest rates steady at its upcoming meeting this week, despite persistent inflation which has been above their 2% target for over five years. The FOMC's decision is expected on Wednesday. Analysts suggest the decision is driven by economic indicators, with a potential rate hike deferred to December.
- Financial conditions in the US have begun to tighten but remain relatively loose, as indicated by the Chicago Fed's National Financial Conditions Index at -0.50. The Fed's tone regarding financial conditions at Chair Kevin Warsh's press conference will be crucial for future rate hike expectations.
- Global markets are monitoring central bank responses to inflation and growth, which will be critical for overall market direction.
- Current central bank rates are: AUD 4.60%, USD 4.00%, GBP 3.75%, EUR 2.65%, CAD 2.25%, JPY <1.25%, CHF 0.00%.

2. US & European Markets

- US stocks ended lower last Friday due to rising oil prices and renewed inflation concerns. The Dow Jones Industrial Average dropped 1.23%, the S&P 500 fell 0.52%, and the Nasdaq 100 slipped 0.21%. For the week, the Dow saw a slight gain, while the S&P 500 and Nasdaq Composite declined.
- Wall Street futures are showing mixed signals in pre-market trading for Monday, October 26, with SPDR Dow Jones Industrial Average (DIA) down 0.82%, Invesco QQQ Trust (QQQ) down 0.28%, and SPDR S&P 500 (SPY) down 0.43% as of Friday's pre-market data.
- Mega-cap US stocks like NVIDIA (NVDA) showed a pre-market gain of 1.14%. However, overall, AI-related jitters continue to weigh on investor sentiment, especially concerning the infrastructure required, with a CNBC poll showing 63% opposition to AI data centers near homes.
- Upcoming earnings reports for the week include Verizon, Cadence Design Systems, Nucor, and Welltower on Monday, October 26. Etsy also reports Q3 earnings on October 28.
- European markets also closed lower last week, with Germany's DAX declining 0.8%, France's CAC 40 slipping 0.3%, and the pan-European STOXX 600 dropping 0.31%.

3. Indian Markets & Dalal Street

- Indian equities experienced a significant fall of over 2% last week, breaking a two-week gaining streak. This broad-based selling, particularly affecting small-cap and mid-cap segments, was driven by rising crude oil prices, FII outflows, and geopolitical tensions.
- The Sensex and Nifty both recorded losses exceeding 2%.
- Brokerages suggest a focus on stock- and sector-specific opportunities with strong earnings visibility and valuation comfort amidst the current environment of high inflation and central bank actions.
- News regarding IndiGo and Air India Group shifting flights to Navi Mumbai International Airport, starting December 2026, could impact related aviation stocks.
- Karnataka's Chief Minister has warned Bengaluru IT firms against alleged bias in hiring Kannadigas, reigniting a politically sensitive debate over local employment quotas.

4. Commodities & Crypto Wire

- WTI Crude Oil remains elevated, trading around $103 per barrel, with Brent crude near $116-$117, fueled by ongoing geopolitical tensions in the Middle East and concerns about supply disruptions, particularly involving Iran. The possibility of military action against Iran and accusations of Iran driving up oil prices are key catalysts. The odds of WTI reaching $110 by month-end have risen to 34%.
- Gold (XAU/USD) is facing selling pressure and has retreated to around $4,008-$4,015 per ounce, testing the critical $4,000 support level. A break below $4,000 could lead to a deeper sell-off, while holding above this level could see a rebound towards $4,100-$4,200. Gold has seen a "proper rug pull" as investors possibly sell assets to offset losses elsewhere.
- Bitcoin and other cryptocurrencies are experiencing high-volume volatility, though specific major regulatory or adoption headlines for today were not prominent in the search results.

💰 CAPITAL BASE & ALLOCATION RULES ($3,000 TOTAL)

- **Crypto Futures:** $400 (13.3%) | Recommended Leverage: 3x–5x Isolated | Risk Cap: 1–2% ($4–$8)
- **Indian Options (Intraday):** $500 (16.7%) | Option Buying Only | Risk Cap: 10–15% Premium ($30–$45)
- **Commodities (Micro Gold & Oil):** $400 (13.3%) | Recommended Leverage: 10x–15x Micro Lots | Risk Cap: 2% ($8)
- **US Stocks (Fractional):** $400 (13.3%) | 1x Unleveraged Cash | Risk Cap: 3% ($12)
- **Indian Stocks (Delivery):** $400 (13.3%) | 1x Unleveraged Cash | Risk Cap: 5% ($20)
- **Forex Short-Term Futures:** $450 (15.0%) | Recommended Leverage: 10x–20x | Risk Cap: 1% ($4.50)
- **Forex Long-Term Carry Swing:** $450 (15.0%) | Recommended Leverage: 2x–3x | Risk Cap: 2% ($9.00)

🎯 STRATEGY-BASED DAILY TICKER SELECTION & LEVEL EXECUTION MANUAL

INDIAN EQUITIES (STRICTLY LONG-ONLY)

Strategy: Screen Nifty leaders using 50-SMA support bounces or 20/50 EMA golden crosses. Given the current broad market weakness in India, focus on stocks showing resilience or clear technical bounce signals from these moving averages after recent corrections.

Ticker	Current/Recent Price Action	Strategy & Selection Reason	Entry/Target/Stop (Illustrative)
Infosys (INFY)	Highly active stock last week. Look for bounce from 50-SMA if it corrects further.	Nifty Leader exhibiting potential 50-SMA support bounce opportunity after recent market-wide correction. High trading value indicates institutional interest.	Entry: ~ ₹1500 (near 50-SMA). Target: ₹1580-1600. Stop: ₹1470.
Reliance Industries (RIL)	Active stock, typically a Nifty bellwether. Monitor for 20/50 EMA golden cross on daily or weekly for trend confirmation.	Mega-cap Nifty stock, if it forms a 20/50 EMA golden cross, indicates strengthening bullish momentum following broader market consolidation.	Entry: Upon confirmed golden cross. Target: 3-5% upside. Stop: Below 50-EMA.

US EQUITIES

Large-Cap (BI-DIRECTIONAL)

Strategy: Screen using 21-day EMA pullbacks or 50-day SMA rejection strategy on mega-cap growth leaders. US market experienced tech sell-off and overall declines.

Ticker	Current/Recent Price Action	Strategy & Selection Reason	Entry/Target/Stop (Illustrative)
NVIDIA (NVDA)	Pre-market up 1.14%. Strong AI narrative but subject to volatility and recent "AI jitters".	Potential 21-day EMA pullback buy if pre-market gains fade and it pulls back to short-term support, indicating a healthy retest before further upside. Conversely, a rejection at a key resistance (e.g., 50-day SMA) could signal a short opportunity if broader tech sell-off resumes.	Long Entry: On 21-EMA pullback. Target: Recent high. Stop: Below 21-EMA. Short Entry: On 50-SMA rejection. Target: Recent low. Stop: Above 50-SMA.
Microsoft (MSFT)	No specific pre-market data for MSFT directly, but mega-cap tech generally seeing "AI jitters" and market weakness.	Monitor for 50-day SMA rejection. If MSFT fails to break above its 50-day SMA after a relief rally, it suggests continued bearish sentiment, offering a short opportunity.	Short Entry: On 50-SMA rejection. Target: Previous support. Stop: Above 50-SMA.
Tesla (TSLA)	No specific pre-market data for TSLA directly. Volatile stock, responsive to broader market and individual news.	Look for a 21-day EMA pullback if there's a strong dip. Tesla's historical volatility makes 21-EMA a dynamic support/resistance.	Long Entry: On 21-EMA pullback. Target: ~2-3% upside. Stop: Below 21-EMA.

Mid-Cap & Small-Cap (STRICTLY LONG-ONLY)

Strategy: Screen using Stage-2 VCP (Volatility Contraction Pattern) or High Relative Volume (RVOL > 2.0) breakouts. Given the underperformance of broader markets, these require strong individual catalysts.

Ticker	Current/Recent Price Action	Strategy & Selection Reason	Entry/Target/Stop (Illustrative)
Crown Castle Inc. (CCI)	Premarket gain of +15.0% on SpaceX news and raised guidance.	High Relative Volume (RVOL > 2.0) breakout on significant news (SpaceX discussions). This strong pre-market move indicates a breakout from a potential VCP or strong momentum.	Entry: Break above pre-market high. Target: Next resistance based on fib extensions. Stop: Below breakout candle low.
22nd Century Group (XXII)	Premarket gain of +50.5%.	High Relative Volume (RVOL > 2.0) breakout. Extreme pre-market move suggests strong speculative interest. Requires careful entry due to volatility.	Entry: On sustained breakout above initial resistance. Target: Scale out on strength. Stop: Tight, below breakout level.

CRYPTO FUTURES (BI-DIRECTIONAL)

Strategy: Screen using 4H 21-EMA trend following and high-volume volatility breakouts. Crypto markets are exhibiting volatility.

Ticker	Current/Recent Price Action	Strategy & Selection Reason	Entry/Target/Stop (Illustrative)
Bitcoin (BTC/USD)	Subject to high-volume volatility. Recently showing indecision/consolidation.	If BTC breaks above/below a key consolidation range on high volume, indicating a volatility breakout. Alternatively, a clear trend developing above or below the 4H 21-EMA.	Long Entry: Breakout above consolidation with volume. Short Entry: Breakout below consolidation with volume. Target/Stop: Based on 1-2% risk cap.
Ethereum (ETH/USD)	Generally follows BTC trends but can have independent moves.	Similar to BTC, look for a clean break on high volume out of a consolidation pattern, or sustained trend above/ below the 4H 21-EMA.	Long Entry: Sustained move above 4H 21-EMA. Short Entry: Sustained move below 4H 21-EMA. Target/Stop: Based on 1-2% risk cap.

COMMODITIES (BI-DIRECTIONAL)

Strategy: Gold (XAU/USD) and WTI Crude Oil using Pivot & Fibonacci extension levels. Both commodities are highly sensitive to geopolitical news.

Ticker	Current/Recent Price Action	Strategy & Selection Reason	Entry/Target/Stop (Illustrative)
Gold (XAU/USD)	Around $4,008-$4,015, testing $4,000 support. Pivot (P) 4001.63, R1 4027.25, S1 3970.19. Downtrend threatening to deepen.	Trading near crucial Fibonacci and pivot support around $4,000. A bounce from this level indicates buyer defense. A decisive break below could trigger further selling towards S2/S3.	Long Entry: Confirmation of bounce above $4,000 (e.g., P 4001.63). Target: R1 4027.25, then R2 4058.69. Stop: Below S1 3970.19. Short Entry: Break below $3970 with momentum. Target: S2 3944.57. Stop: Above $4000.
WTI Crude Oil	Around $103, elevated due to Middle East tensions. Key downside reference $95, upside objective $110, then $120. Next test above $102.	Strong bullish momentum driven by geopolitics. Trading above $102 suggests further upside towards $110. A pullback to strong support could be a buying opportunity. Downside risk if geopolitical tensions ease.	Long Entry: Pullback to strong support (e.g., $100-$101) with bounce confirmation. Target: $105.50 (Friday's high), then $110. Stop: Below identified support. Short Entry: Rejection at $105.50 or $110. Target: $102. Stop: Above resistance.

FOREX FUTURES (BI-DIRECTIONAL)

Short-Term (EUR/USD, GBP/USD)

Strategy: Leverage intermarket setups, DXY pullback, and key support/resistance levels.

Ticker	Current/Recent Price Action	Strategy & Selection Reason	Entry/Target/Stop (Illustrative)
EUR/USD	Holding above 1.11 support, daily RSI rebounding from oversold. Recovery restrained below 1.1260. Faces critical test after trend break. A break above 1.1265 could extend to 1.1360.	Potential bullish rebound if DXY pullback continues and EUR/USD can break above 1.1260-1.1265. Short if it breaks below 1.11.	Long Entry: Break above 1.1265. Target: 1.1360. Stop: Below 1.1200. Short Entry: Break below 1.1100. Target: 1.1000. Stop: Above 1.1130.
GBP/USD	Holding above 1.3130 support, sideways consolidation since Nov 2025. Rallied last week, breaking above 50-week EMA and 1.34 at one point. A break above 1.3430 could rally to 1.3650.	Bullish bias as long as it holds above 1.3130 and within consolidation. Short-term pullbacks could be buying opportunities if the 1.32 level holds as strong support.	Long Entry: Pullback to 1.3250-1.3300 support with bounce. Target: 1.3430, then 1.3650. Stop: Below 1.3200. Short Entry: Break below 1.3130. Target: 1.2900. Stop: Above 1.3160.

Macro Carry Swings (USD/JPY, AUD/USD)

Strategy: Based on interest rate differentials and broader market sentiment. USD/JPY carry trade faces concern amid US equities pressure.

Ticker	Current/Recent Price Action	Strategy & Selection Reason	Entry/Target/Stop (Illustrative)
USD/JPY	Pullback in USD/JPY observed, holding key support. Concern building around carry unwind.	The carry trade has been a long-standing play. If US equity pressure continues, it could lead to carry unwind, suggesting a short opportunity if key support breaks. Conversely, renewed risk-on sentiment could re-establish the carry.	Short Entry: Break below key support (e.g., 148.00). Target: 145.00. Stop: Above 148.50. Long Entry: Bounce from support, confirming carry re-establishment. Target/Stop: Based on 2% risk cap.
AUD/USD	RBA Assist Gov Kent spoke recently (Oct 18). Sarah Hunter interview on 60 Minutes (Oct 25) for AUD/USD.	AUD/USD can be a barometer for global risk sentiment. Look for sustained moves based on risk-on/risk-off flows and divergence in central bank rhetoric (RBA vs. Fed).	Directional trade (Long/Short) based on market sentiment and RBA/Fed policy divergence. Target/Stop: Based on 2% risk cap.

INDIAN OPTIONS (BI-DIRECTIONAL)

Strategy: Nifty 50 / BankNifty 15-Minute Opening Range Breakouts (Call for Long, Put for Short). Indian markets saw broad-based selling last week.

Ticker	Strategy & Selection Reason	Execution Manual
Nifty 50 Options	Capitalize on initial market direction and momentum post-open, especially after a volatile previous week. Opening Range Breakout (ORB) on Nifty 50 provides clear entry/exit signals for intraday trading.	**Execution:** • Wait for the first 15-minute candle to close. • Mark the high and low of this candle. • **Long (Call):** If Nifty breaks above the 15-min high, buy an ATM (At-The-Money) Call option. • **Short (Put):** If Nifty breaks below the 15-min low, buy an ATM (At-The-Money) Put option. • **Stop Loss:** The opposite side of the 15-min range (e.g., if long, stop is 15-min low). • **Target:** 1:1 or 1:1.5 Risk-Reward ratio, or trailing stop loss based on momentum.
BankNifty Options	BankNifty is highly volatile and liquid, making it suitable for ORB strategy. Financial sector news (e.g., NBFC margins, home loan costs) could impact intraday movements.	**Execution:** • Wait for the first 15-minute candle to close. • Mark the high and low of this candle. • **Long (Call):** If BankNifty breaks above the 15-min high, buy an ATM Call option. • **Short (Put):** If BankNifty breaks below the 15-min low, buy an ATM Put option. • **Stop Loss:** The opposite side of the 15-min range. • **Target:** 1:1 or 1:1.5 Risk-Reward ratio, or trailing stop loss.

📈 BACKTEST METRICS & EQUITY CURVE

Strategy Backtest (10-Year Period)
