SECTION 0: DAILY MACRO & FINANCIAL NEWS DIGEST

1. Global Macro & Central Banks

- US stock futures are mixed as October begins, with Nasdaq 100 futures up 0.67% and S&P 500 futures up 0.16%, while Dow Jones futures slipped 0.37%.
- The benchmark 10-year Treasury yield traded as high as 5.338%, and long-end Treasury yields hit fresh 24-year highs, driven by investor focus on inflation, the fiscal deficit, Treasury supply, and term premium.
- Concerns persist that persistent inflation could prompt the Federal Reserve to keep interest rates higher for longer, despite lower-than-expected PCE inflation data for August and an upward revision to second-quarter GDP.
- The Fed's preferred inflation gauge, PCE, is expected to show headline prices up 3.7% and core at 3.3% over the past year, indicating prices are still rising faster than the Fed desires.

2. US & European Markets

- Micron Technology (MU) reported strong earnings and upbeat guidance, beating analyst estimates with adjusted EPS of \$33.42 on revenue of \$54.23 billion, up 379% year-over-year, which has revived optimism around the AI trade.
- NVIDIA (NVDA) stock is showing pre-market gains, up about 0.91%, following Micron's strong results, reinforcing confidence in continued AI infrastructure spending. Analysts anticipate NVDA could trade near \$240 by October 1, 2026, driven by AI computing growth and rising price targets. NVIDIA recently reported \$2.22 EPS and \$96.22 billion in revenue, exceeding expectations.
- Microsoft (MSFT) climbed about 2.5% near \$513 after rolling out its Copilot super app. The company reported \$4.74 EPS and \$90.01 billion in revenue for the last quarter, surpassing consensus estimates.
- Tesla (TSLA) dropped about 6.7% to roughly \$355 ahead of its third-quarter delivery report, with Street consensus pointing to fewer cars delivered than a year ago. Tesla secured \$30 billion in new credit lines from Citi and Wells Fargo for future initiatives like Cybercab, Optimus, and AI compute, but the stock's performance remains tied to car deliveries. As of pre-market, TSLA is trading at \$356.01, up 0.34%.
- Other notable pre-market movers include Vicor (VICR) up 11.79% and Kulicke and Soffa Industries (KLIC) up 2.09%. Lam Research is trading higher after Bank of America named it a top semiconductor pick due to AI-driven chip demand.

3. Indian Markets & Dalal Street

- Indian benchmark indices extended losses for the fourth straight session on Thursday, October 1, with the Sensex falling 570.59 points (0.79%) to 71,909.70 and the Nifty50 down 198.50 points (0.88%) to 22,421.95. This marks the eighth consecutive week the Nifty 50 index has ended negatively, its longest losing streak since 2001.
- The sell-off was driven by firm energy prices, bond yields volatility, and rate-hike fears. External factors like multi-year high bond yields and elevated crude oil prices are cited as major contributors.
- Bajaj Auto, Maruti Suzuki India, and Shriram Finance were the top losers in the Nifty50 index. The Nifty Auto index was the worst performing sectoral index, declining 3.3% to 4.5%.
- In contrast, Nifty IT rose 0.46% and was the only sectoral index to trade in the green, with Infosys, HDFC Life Insurance, HDFC Bank, and SBI Life Insurance among the gainers.

4. Commodities & Crypto Wire

- WTI Crude Oil (USOIL) is up 2.00% at \$91.3 as of early October 1st, driven by Middle Eastern security concerns and tight supplies, strong refinery utilization, and global commercial inventories remaining below historical averages. Oil prices are sharply higher after Chinese refiners suspended most October fuel exports, adding pressure to already tight global gasoline and diesel supplies. Brent crude is approximately US\$100.09 per barrel.
- OPEC+ is expected to maintain its oil production targets for November, with August output still about 5 million barrels per day below pre-war levels. The focus is shifting to reviewing members' production capacity to set 2027 output baselines.
- Gold ticked higher as softer inflation provides some support, but elevated yields and lingering tightening risks remain key headwinds.
- Bitcoin (BTC) is holding its range around \$77,666, while Ethereum (ETH) is trading around the \$2.7K area, with market analysis watching the \$2,700-\$2,750 zone for potential breakout or rejection.
- The EU's securities markets regulator (ESMA) has called for stronger powers against unlicensed third-country crypto firms, while the UK's FCA has brought crypto firms under full regulation, covering consumer protection and market integrity. The US SEC's proposed "Regulation Crypto Assets" aims to create a tailored offering regime for digital assets, but remains a proposal with comments due October 20, 2026. The GENIUS Act, signed in July 2025, sets a framework for payment stablecoins in the US, requiring 1:1 reserves of high-quality liquid assets.
