Date: October 10, 2026

Session Highlight:  New York Session Pre-Open Briefing (1 Hr Before Open)

Session News Focus: Wall Street pre-market movers, US Federal Reserve news, mega-cap US stocks (NVDA, MSFT, TSLA), and WTI Crude Oil catalysts.

SECTION 0: DAILY MACRO & FINANCIAL NEWS DIGEST

1. Global Macro & Central Banks

- Global economic growth is projected to slow to 2.6% in 2026 from 2.9% last year, influenced by higher energy prices and rising borrowing costs.
- The US economy's growth is becoming uneven, with September's nonfarm payrolls rising by only 29,000, significantly below the 90,000 consensus estimate, and unemployment slightly increasing from 4.1% to 4.2%.
- Eurozone inflation accelerated from 3.2% in August to 3.8% in September, exceeding the European Central Bank's 2% target, with energy inflation surging to 18.8%.
- The US Federal Reserve raised the target range for the federal funds rate by 0.25 percentage points to 3.75-4.00% in September 2026, aiming to bring inflation back to its 2% goal. Fed Chair Kevin Warsh's upcoming keynote at Jackson Hole will focus on inflation and the future rate path. US 10-year Treasury yields recently reached 5.34%, their highest level in approximately 24 years.

2. US & European Markets

- US stock futures indicate a positive pre-market opening, with the SPDR S&P 500 (SPY) up 0.30%, Invesco QQQ Trust (QQQ) up 0.69%, and SPDR Dow Jones Industrial Average (DIA) up 0.03%.
- Microsoft (MSFT):** The company reported strong quarterly results, with \$4.74 earnings per share (EPS) topping analyst estimates of \$4.24 and revenue of \$90.01 billion exceeding expectations of \$87.62 billion. Microsoft introduced "Microsoft-Decision-1," an AI model touted for faster decision-making than GPT-6 Sol, enhancing its enterprise AI position. Analysts widely rate MSFT as a "Moderate Buy," with a consensus target price of \$578.73.
- NVIDIA (NVDA):** Reported \$2.22 EPS, beating estimates by \$0.13, and revenue of \$96.22 billion, surpassing expectations by \$3.95 billion, reflecting a 105.9% year-over-year increase. Demand for AI infrastructure remains robust, evidenced by TSMC's 50% Q3 revenue growth and reports of SpaceX planning to purchase up to \$40 billion in NVIDIA AI chips. NVIDIA shares rose nearly 2% in pre-market trading, reaching \$234.27, after a three-day decline. Technical analysts note resistance near \$235 and potential support around \$215-\$220.
- Tesla (TSLA):** The stock surged 7.5% over the past month after reporting better-than-expected Q3 vehicle deliveries of 486,532, against a consensus estimate of 461,100. Despite this, the stock's valuation remains very high (P/E ratio above 354), and market focus is increasingly shifting towards its AI robotics and robotaxi ambitions over core EV sales.
- Western Europe's economy continues to be constrained by weak investment, trade fragmentation, and volatile energy prices.

3. Indian Markets & Dalal Street

- The Indian stock market ended an eight-week losing streak on Friday, October 9, 2026, with the Sensex climbing 879 points (1.23%) to 72,472.33 and the Nifty 50 advancing 289 points (1.30%) to 22,520.45. This rebound was attributed to a reduction in crude oil prices and robust domestic institutional buying, which counteracted persistent foreign institutional selling.
- On Thursday, Indian equities experienced a significant sell-off, with the Sensex and Nifty hitting 2026 lows, primarily due to concerns over rising interest rates, elevated crude oil prices, and a weakening rupee.
- The Reserve Bank of India (RBI) recently increased the repo rate by 25 basis points to 5.50%.
- Key market drivers for the upcoming week include Q2 FY27 corporate earnings, domestic inflation data, crude oil movements, and global interest rate expectations.

4. Commodities & Crypto Wire

- Crude Oil:** WTI Crude oil was modestly higher on October 7, with traders assessing ongoing supply risks. Higher energy prices, partly fueled by the Middle East war, continue to pose challenges to global economic stability. Tanker rates have surged to \$1.3 million per day, with nine shipping stocks doubling in 2026.
- Gold:** The prevailing strength of the US Dollar is currently seen as the biggest near-term constraint on Gold prices.
- Crypto:** US spot Bitcoin ETFs recorded significant net outflows of \$731 million on October 7-8. However, they saw a positive shift with \$21 million in inflows on October 9, hinting at a potential change in investor sentiment. Despite this, overall crypto ETF outflows in October have exceeded \$1 billion, with Ethereum ETFs experiencing nine consecutive days of net outflows and Solana ETFs also showing losses. Institutional investors are noted to be contributing to Bitcoin ETF inflows through "basis trades."
- Regulatory developments in the crypto space include the European Securities and Markets Authority (ESMA) issuing an opinion to clarify supervisory expectations for crypto asset services involving stablecoins that do not comply with MiCA requirements. The US Commodity Futures Trading Commission (CFTC) published an advance notice of proposed rulemaking (ANPRM) aiming to establish specific rules for leveraged, margined, or financed retail crypto asset transactions and to create a new "crypto asset market" registration category. Additionally, FinCEN withdrew a proposed rule concerning crypto mixing.
