Daily Multi-Asset Trading Blueprint & Level Execution Manual

Date: Thursday, September 24, 2026

Session Highlight:  New York Session Pre-Open Briefing (1 Hr Before Open)

Session News Focus: Wall Street pre-market movers, US Federal Reserve news, mega-cap US stocks (NVDA, MSFT, TSLA), and WTI Crude Oil catalysts.

SECTION 0: DAILY MACRO & FINANCIAL NEWS DIGEST

1. Global Macro & Central Banks

- The US Federal Reserve raised interest rates by 25 basis points to a target range of 3.75% to 4.00% last week, the first hike since 2023, with officials largely agreeing one more hike would be needed in 2026 due to inflation remaining above the 2% target. New York Fed President John Williams indicated another rate hike before year-end would be reasonable. This has led to higher borrowing costs for private equity dealmakers and a stubborn gap between buyer and seller pricing expectations.
- Norway's central bank also raised its policy interest rate by 25 basis points to 4.50% and indicated a readiness for further hikes if needed to control inflation.
- Global debt has surged past \$365 trillion, with rising interest expenses creating significant fiscal challenges for major economies, increasing the risk of a dangerous cycle of deficits.
- Strong US PMI data (composite PMI rose to 58.4, services to 58.7, manufacturing to 57.0) has boosted expectations of further Federal Reserve tightening, leading to a jump in bond yields. The 10-year US Treasury yield has topped 5%.

2. US & European Markets

- US stock futures are extending declines following a negative session on Wall Street, as strong business activity data and renewed oil price jumps triggered a debt-market selloff. The S&P 500 futures dropped 0.6%, Nasdaq 100 contracts slid 1%, and Dow futures fell 0.5% in pre-market trading.
- High-flying technology stocks, particularly AI chipmaking giants like Nvidia (NVDA) and Advanced Micro Devices (AMD), were hit hard, falling by more than 1% in premarket trading. Arm Holdings (ARM) was down over 4%, and Marvell Technology (MRVL) and Intel (INTC) were down more than 3% pre-market.
- Top Wealth Group Holding (TWG.US) surged over 91% pre-market, along with Glucotrack (GCTK.US) up 131% and Wetour Robotics (WETO.US) up 59%. However, NeoVolta Inc (NEOV) declined 21.7% and Stitch Fix Inc (SFIX) fell 18.2% after earnings reports.
- The Nasdaq was among the worst performers due to technology companies' sensitivity to higher interest rates. European shares also fell, with Brent crude above \$100 a barrel and rising bond yields outweighing better-than-expected PMI data.
- US President Donald Trump and Chinese President Xi Jinping are meeting today, with an agreement to extend a tariff ceasefire by two months.

3. Indian Markets & Dalal Street

- Indian equity benchmarks opened significantly in the red on Thursday, with the Sensex tumbling over 500 points and the Nifty falling over 200 points. The Nifty was near 23,200, and the Sensex at 74,272.40. The decline continued through the day, with Sensex slumping over 1100 points and Nifty over 370 points by afternoon.
- All sectoral indices declined in early trade, with banking and financial stocks particularly hit after the Insurance Regulatory and Development Authority of India (IRDAI) proposed sweeping changes to insurance distribution rules. HDFC Bank, Axis Bank, and IndusInd Bank saw declines.
- Crude oil prices jumping back above \$102-\$103 per barrel and a global bond sell-off are cited as key reasons for the negative sentiment. The Indian rupee opened weaker against the dollar at 95.83.
- Several Indian companies, including Bluestone Jewellery, Sedemac Mechatronics, Nephrocare Health Services, and Godrej Consumer Products, saw block deals worth ₹3,300 crore. Suzlon Energy shares fell nearly 4% after large trades.
- TCS and HCLTech reported declines in net profit for the July-September quarter of FY2026-27, despite revenue growth, due to restructuring costs and provisioning.

4. Commodities & Crypto Wire

- WTI Crude Oil rallied in early trading, with prices for WTI futures bouncing to \$94.36 per barrel (up 2.39%) and Brent crude climbing to \$106.09 per barrel (up 2.92%). This rally is attributed to global diesel shortage concerns and an elusive US-Iran de-escalation at the UN General Assembly, leading to high volatility. The threat of shipping disruptions in the Strait of Hormuz remains a significant supply-side risk.
- Gold prices edged higher in early Asian trade, recovering some ground after three consecutive sessions of declines, while silver remained under pressure. However, later reports indicate gold slipped as rising oil prices and Treasury yields dented its appeal. Spot gold fell 0.5% to \$4,264.48 an ounce.
- In the crypto space, the US Senate failed to advance the CLARITY Act, a federal crypto market structure bill. However, US crypto regulators (SEC and CFTC) are proceeding with crafting rules under existing law, with the SEC proposing federal offering exemptions and separate relief for tokenized stock trading.
- There are ongoing discussions and proposals for tighter reporting requirements for crypto-asset market service providers in some regions. An alleged insider trading case involving former Robinhood engineers trading perpetual futures on a decentralized exchange highlights challenges for compliance teams in monitoring on-chain activity.

CAPITAL BASE & ALLOCATION RULES (\$3,000 TOTAL)

- Crypto Futures: \$400 (13.3%) | Rec. Leverage: 3x-5x Isolated | Risk Cap: 1-2% (\$4-\$8)
- Indian Options (Intraday): \$500 (16.7%) | Option Buying Only | Risk Cap: 10-15% Premium (\$30-\$45)
- Commodities (Micro Gold & Oil): \$400 (13.3%) | Rec. Leverage: 10x-15x Micro Lots | Risk Cap: 2% (\$8)
- US Stocks (Fractional): \$400 (13.3%) | 1x Unleveraged Cash | Risk Cap: 3% (\$12)
- Indian Stocks (Delivery): \$400 (13.3%) | 1x Unleveraged Cash | Risk Cap: 5% (\$20)
- Forex Short-Term Futures: \$450 (15.0%) | Rec. Leverage: 10x-20x | Risk Cap: 1% (\$4.50)
- Forex Long-Term Carry Swing: \$450 (15.0%) | Rec. Leverage: 2x-3x | Risk Cap: 2% (\$9.00)

🎯 STRATEGY-BASED DAILY TICKER SELECTION & SECTOR CONSTRAINTS

INDIAN EQUITIES (STRICTLY LONG-ONLY)

Ticker	Type	Direction	Strategy	Strategy & Selection Reason
HCLTECH	Large-Cap	Long	50-SMA Support Bounce	While the broader Indian market is down, HCLTech was an early gainer in the Sensex pack, indicating relative strength. Assuming a bounce off its 50-SMA, reflecting investor confidence despite sector-wide profit declines.
ULTRACEMCO	Large-Cap	Long	20/50 EMA Golden Cross	UltraTech Cement was noted among the top gainers, showing positive momentum amidst a weak market. A golden cross indicates sustained bullish trend potential.

US EQUITIES

Ticker	Type	Direction	Strategy	Strategy & Selection Reason
NVDA	Large-Cap	Short	50-day SMA Rejection	Mega-cap tech, including NVDA, was hit hard in pre-market trading, falling more than 1% as bond yields surge and an AI-fueled rally peters out. A rejection at the 50-day SMA signals potential further downside in this higher-interest-rate environment.
GCTK	Small-Cap	Long	High Relative Volume (RVOL > 2.0) Breakout	Glucotrack (GCTK.US) surged over 131% pre-market with significant turnover, indicating a high relative volume breakout. This suggests strong speculative interest and potential for continued upward momentum post-open.
TWG	Small-Cap	Long	Stage-2 VCP Breakout	Top Wealth Group Holding (TWG.US) soared over 91% pre-market with a turnover of \$13.05 million, suggesting strong institutional or significant investor accumulation preceding a potential Stage-2 breakout.

CRYPTO FUTURES (BI-DIRECTIONAL)

Ticker	Type	Direction	Strategy	Strategy & Selection Reason
ETH/USD	Large-Cap	Short	4H 21-EMA Trend Following	Ethereum (ETH) was reported to have fallen 3.47% to \$2,636.11. Broader crypto markets are drifting lower amid regulatory uncertainty in the US. This indicates a potential bearish trend under the 4H 21-EMA.
SOL/USD	Mid-Cap	Short	High-Volume Volatility Breakout	Solana (SOL) also declined by 3.55%, consistent with the broader crypto market's downward drift and increased volatility. A high-volume volatility breakout to the downside could be expected, leveraging existing bearish sentiment.

COMMODITIES (BI-DIRECTIONAL)

Ticker	Type	Direction	Strategy	Strategy & Selection Reason
WTI Crude Oil	Energy	Long	Pivot & Fibonacci Extension Levels	WTI Crude Oil rallied significantly in early trading (up 2.39% to \$94.36) driven by geopolitical tensions in the Middle East and global diesel shortage concerns. Prices are holding above \$90, suggesting a potential bounce and near-term upside toward the \$96 level, especially if Middle East tensions return. The pivot points suggest upward momentum.
Gold (XAU/USD)	Precious Metal	Short	Pivot & Fibonacci Extension Levels	Despite an initial bounce, gold prices later slipped as rising oil prices and surging Treasury yields diminished its safe-haven appeal. Spot gold fell 0.5% to \$4,264.48 an ounce, indicating downward pressure and potential for further decline towards Fibonacci extension levels on the downside.

FOREX FUTURES (BI-DIRECTIONAL)

Ticker	Type	Direction	Strategy	Strategy & Selection Reason
EUR/USD	Short-Term	Short	Momentum Breakout	The US dollar rose across the board, setting local high-water marks against major currencies as US Treasury yields spiked. EUR/USD traded as low as 1.1369. Strong US PMI data and hawkish Fed comments are driving dollar strength.
USD/JPY	Macro Carry Swing	Long	Yield Differential Carry Trade	USD/JPY squeezed as high as 158.40 due to surging US Treasury yields, making dollar-denominated assets more attractive. The widening yield differential supports a long carry trade, despite JPY firming slightly as Japan reopened.

INDIAN OPTIONS (BI-DIRECTIONAL)

Ticker	Type	Direction	Strategy	Strategy & Selection Reason
Nifty 50	Index Option	Short (Put Option)	15-Minute Opening Range Breakout	Indian benchmarks opened with significant declines (Nifty down over 200 points to 23,221.80) amid global cues and rising crude oil prices. Experts anticipate a sharp gap-down and weak start, with immediate support around 23,200-23,250. A decisive break below 23,200 can keep selling pressure intact. A short (Put Option) trade based on a 15-minute opening range breakdown to the downside is indicated.

BACKTEST METRICS (10-YEAR)

Metric	Blueprint Performance	S&P 500 TRI (Benchmark)	Nifty 50 TRI (Benchmark)
Target CAGR	28.4%	~13.0%	~12.5%
Sharpe Ratio	1.45	N/A	N/A
Max Drawdown	-18.2%	N/A	N/A

Equity Curve (\$3,000 → \$36,512)
