1. Global Macro & Central Banks

- US bond yields remain elevated, contributing to a cautious global market sentiment.
- The US Federal Reserve's preferred inflation gauge, PCE inflation, is expected to show headline prices up 3.7% and core at 3.3%, indicating that everyday expenses are rising faster than the Fed prefers, keeping the debate on elevated borrowing costs alive.
- The European Central Bank (ECB) is actively exploring the use of Artificial Intelligence (AI) for the digital euro, signaling ongoing central bank digital currency (CBDC) development.
- Geopolitical tensions, particularly the US-Iran standoff, continue to keep a risk premium in play for crude oil prices, despite some easing of supply concerns.

2. US & European Markets

- Wall Street futures show S&P 500 futures edging higher by about 0.2%, and Nasdaq-100 futures also moving into positive territory, while Dow Jones futures have seen a drop.
- Mega-cap US tech stocks, including Microsoft (MSFT) and Nvidia (NVDA), have continued to see significant market capitalization increases, driving much of the S&P 500's gains, even as the "Magnificent Seven" have recently traded sideways. Nvidia's market capitalization is approximately \$5.4 trillion, making it the largest among these tech giants.
- Micron, Nvidia, and Alphabet are projected to see their Q3 earnings rise, with the S&P 500 overall expected to show a 24.1% increase in earnings.
- German chipmaker Infineon Technologies has opened a new backend manufacturing facility in Thailand, reflecting strategic long-term investment and diversification in the semiconductor industry amid rising regional competition. The semiconductor rectifiers market is projected to grow at an 8.6% CAGR by 2030.
- The FTSE 100 has slid as global bond yields climb, reflecting broader cautious sentiment in European markets.
- Tesla registrations across several European markets rose in September, extending a rebound.

3. Indian Markets & Dalal Street

- Indian stock market indices, including the Sensex and Nifty 50, opened and traded lower on Thursday, October 1, 2026, extending a losing streak to three sessions. The Nifty 50 is trading below 22,550.
- Persistent Foreign Institutional Investor (FII) selling, coupled with elevated US bond yields and high crude oil prices, continues to weigh heavily on market sentiment. FIIs offloaded ₹10,148 crore (\$1.06 billion) on September 30.
- Domestic Institutional Investors (DIIs) have stepped up buying, adding ₹11,272 crore worth of shares to their portfolios.
- The India VIX is rising, indicating increasing volatility in the market.
- Despite the broader market weakness, Kotak Mahindra Bank gained approximately 3% following a new MD & CEO appointment, and IT stocks, including Infosys, Tata Consultancy Services (TCS), and HCL Technologies, also contributed to the upside.
- Nifty Bank showed relative resilience, ending higher despite opening lower, with resistance around the 55,000-55,100 zone.

4. Commodities & Crypto Wire

- WTI Crude Oil has experienced renewed selling pressure but holds above the \$88.00 mark, recovering to trade near \$91.00 in European trade. Supply recovery in the Middle East, including resumed Saudi East-West pipeline flows, is easing concerns, but the US-Iran standoff maintains geopolitical risk. Initial resistance is seen at \$90.11 and the 38.2% Fibonacci retracement at \$91.13.
- Gold (XAU/USD) is facing rising breakdown risk, with \$4,103 identified as a critical support level, representing the 78.6% Fibonacci retracement.
