Daily Multi-Asset Trading Blueprint & Level Execution Manual

Lead Quantitative Strategist and Institutional Portfolio Manager Briefing

Date: August 9, 2026

Current Session: New York Session Pre-Open Briefing (1 Hr Before Open)

Session News Focus: Wall Street pre-market movers, US Federal Reserve news, mega-cap US stocks (NVDA, MSFT, TSLA), and WTI Crude Oil catalysts.

SECTION 0: DAILY MACRO & FINANCIAL NEWS DIGEST

1. Global Macro & Central Banks

- The Federal Reserve maintains its target range at 3.50%-3.75% since early 2026, with internal divisions on future rate hikes, though one quarter-point cut is projected by year-end. Inflation concerns persist, driven by energy costs and Middle East tensions. Jerome Powell's term as Fed Chair expires in May 2026.
- The European Central Bank (ECB) held its deposit facility rate at 2.25% in July after a June hike, a response to sustained high oil prices and inflation. French inflation unexpectedly quickened in July.
- The Bank of England (BoE) kept rates steady at 3.75% in July for the fifth consecutive time, amid internal divisions over further tightening.
- The Bank of Japan (BoJ) raised interest rates to 1% in June, a 31-year high, driven by inflation concerns.
- China's central bank (PBOC) has maintained low interest rates since May 2025, signaling a "moderately loose" policy for 2026, prioritizing currency stability despite slower growth.
- Geopolitical tensions in the Middle East, particularly US-Iran diplomacy concerning the Strait of Hormuz, continue to influence global oil prices and supply chains.

2. US & European Markets

- US equity markets experienced a surge, with Nasdaq and the S&P 500 reaching new all-time highs, propelled by a weak employment report (interpreted as easing Fed rate hike fears) and strong mega-cap tech earnings. Investors are favoring growth, high-beta, and large-cap tech stocks.
- Nvidia (NVDA) showed pre-market strength, gaining nearly 2% after SpaceX announced it would exclusively use Nvidia chips for its AI infrastructure. Conversely, AMD, a previous SpaceX supplier, saw pre-market declines. SpaceX (SPCX) itself faced volatility due to lockup expirations and concerns over operating losses.
- European shares extended record highs, with the pan-European Stoxx 600 index closing higher, supported by robust corporate earnings and optimism surrounding potential Middle East de-escalation. Siemens Energy benefited from increasing AI data center demand. AstraZeneca shares declined on merger reports.

3. Indian Markets & Dalal Street

- Indian benchmark indices, Sensex and Nifty, extended weekly gains, bolstered by strong Q1 earnings, consistent Foreign Institutional Investor (FII) inflows, and the Reserve Bank of India (RBI) maintaining its repo rate at 5.25%. Nifty 50 closed at 24,570.65 on August 8, 2026.
- FIIs became net buyers, acquiring ₹480.24 crore in equities on Friday (August 8, 2026) after two sessions of selling, though they remain net sellers year-to-date. Domestic Institutional Investors (DIIs) continue to provide strong market support.
- FIIs showed a preference for the automobile, consumer durables, and healthcare sectors due to strong Q1 performance. Capital goods and metals have also seen significant inflows and outperformed the broader market. Nifty Auto and Nifty IT led sectoral gains.

4. Commodities & Crypto Wire

- WTI Crude Oil is stabilizing around \$78 per barrel after recent volatility tied to Strait of Hormuz negotiations. Prices fell over 4.5% in early August on US-Iran diplomacy hopes but faced upward pressure from a missile attack on a Saudi oil tanker. Technical analysis from early August indicated a breakdown from a rising wedge, with potential resistance at Fibonacci levels of \$79.11, \$80.59, and \$82.08.
- Gold futures reached \$4,399.70 per ounce on August 7, 2026, indicating a significant rise. Spot gold was flat-lining above \$4,050 earlier in August. Safe-haven demand, persistent central bank buying (China added 10 tonnes in May), and ETF inflows are supporting prices. However, AI models predict a potential further sell-off towards \$4,098-\$3,800 due to a technical breakdown, as the price consistently closed below the 200-day Moving Average.
- Bitcoin entered August with momentum, trading within a \$61,400-\$64,500 range. Technical indicators suggest a descending channel, but positive global economic news could trigger upward spikes. August forecasts range from \$58,000 to \$70,000, with a closing prediction around \$60,500. Ethereum displays technical strength and resilience, hovering above critical supports. A Supertrend indicator shows a downtrend but is near a double-bottom breakout level of \$1,851.0 (as of late July). Major protocol upgrades for Ethereum and Solana are expected in August.

CAPITAL BASE & ALLOCATION RULES (\$3,000 TOTAL)

- **Crypto Futures:** \$400 (13.3%) | Rec. Leverage: 3x-5x Isolated | Risk Cap: 1-2% (\$4-\$8)
- **Indian Options (Intraday):** \$500 (16.7%) | Option Buying Only | Risk Cap: 10-15% Premium (\$30-\$45)
- **Commodities (Micro Gold & Oil):** \$400 (13.3%) | Rec. Leverage: 10x-15x Micro Lots | Risk Cap: 2% (\$8)
- **US Stocks (Fractional):** \$400 (13.3%) | 1x Unleveraged Cash | Risk Cap: 3% (\$12)
- **Indian Stocks (Delivery):** \$400 (13.3%) | 1x Unleveraged Cash | Risk Cap: 5% (\$20)
- **Forex Short-Term Futures:** \$450 (15.0%) | Rec. Leverage: 10x-20x | Risk Cap: 1% (\$4.50)
- **Forex Long-Term Carry Swing:** \$450 (15.0%) | Rec. Leverage: 2x-3x | Risk Cap: 2% (\$9.00)

STRATEGY-BASED DAILY TICKER SELECTION & LEVEL EXECUTION

1. INDIAN EQUITIES (STRICTLY LONG-ONLY)

Ticker	Action	Strategy & Selection Reason
SBI (State Bank of India)	Long	Strategy: 50-SMA Support Bounce. Reason: Identified as a major wealth creator recently, indicating strong institutional interest. Assuming a pullback to its 50-SMA would present a buying opportunity in a broader bullish Indian market trend.
TCS (Tata Consultancy Services)	Long	Strategy: 20/50 EMA Golden Cross. Reason: Part of the IT sector which advanced significantly on positive earnings and mentioned as a wealth creator. A golden cross indicates strengthening bullish momentum, aligning with FII preference for quality large-caps.

2. US EQUITIES

Large-Cap (BI-DIRECTIONAL)

Ticker	Action	Strategy & Selection Reason
NVDA (Nvidia)	Bi-directional	Strategy: 21-day EMA Pullback Buy / 50-day SMA Rejection Short. Reason: Strong pre-market momentum due to SpaceX AI chip partnership and significant contributor to S&P 500 gains. High volatility requires bi-directional strategy. A pullback to 21-day EMA could be a buy, while rejection from 50-day SMA could signal a short.
MSFT (Microsoft)	Bi-directional	Strategy: 21-day EMA Pullback Buy / 50-day SMA Rejection Short. Reason: A mega-cap tech leader consistently in focus. Similar to NVDA, large-cap growth stocks are prone to technical pullbacks/rejections even within an uptrend.

Mid-Cap & Small-Cap (STRICTLY LONG-ONLY)

Ticker	Action	Strategy & Selection Reason
PLTR (Palantir Technologies)	Long	Strategy: Stage-2 VCP Breakout / High Relative Volume (RVOL > 2.0) Breakout. Reason: Reported nearly doubled Q2 sales and raised 2026 revenue forecast, indicating strong fundamental growth. This strong performance can attract institutional buying leading to VCP (Volatility Contraction Pattern) breakouts on high volume.

3. CRYPTO FUTURES (BI-DIRECTIONAL)

Ticker	Action	Strategy & Selection Reason
BTC/USD (Bitcoin)	Bi-directional	Strategy: 4H 21-EMA Trend Following / High-Volume Volatility Breakout. Reason: Bitcoin entered August with momentum but is currently in a descending channel, making it prone to volatility breakouts. High-volume moves breaking the 4H 21-EMA would signal trend continuation or reversal.
ETH/USD (Ethereum)	Bi-directional	Strategy: 4H 21-EMA Trend Following / High-Volume Volatility Breakout. Reason: Ethereum shows technical strength relative to Bitcoin and hovers above critical supports. The Supertrend indicator signals a downtrend, but it is close to a double-bottom breakout level of \$1,851.0 (as of late July). This implies potential for strong directional moves.

4. COMMODITIES (BI-DIRECTIONAL)

Ticker	Action	Strategy & Selection Reason
XAU/USD (Gold)	Bi-directional	Strategy: Pivot & Fibonacci Extension Levels (Short Bias). Reason: While gold futures rose to \$4,399.70 on Aug 7, AI models predict a sell-off to \$4,098-\$3,800 for Aug 9, citing a technical breakdown and consistent closes below the 200-day MA. This suggests a potential short opportunity on retesting resistance or extension levels.
WTI Crude Oil	Bi-directional	Strategy: Pivot & Fibonacci Extension Levels (Correction/Reversal Trade). Reason: WTI Crude is stabilizing around \$78/barrel after a breakdown from a rising wedge. Fibonacci levels at \$79.11 (38.2%), \$80.59 (50%), and \$82.08 (61.8%) could act as resistance if a corrective bounce occurs. Bi-directional to capture either a bounce to resistance or continued downside.

5. FOREX FUTURES (BI-DIRECTIONAL)

Short-Term

Ticker	Action	Strategy & Selection Reason
EUR/USD	Bi-directional	Strategy: Short-Term Breakout/Range Trade. Reason: Market completed an upward wave to 1.1557 and declined to 1.1514 (Aug 7). A false breakout at 1.1528 combined with positive Eurozone data could trigger a buy signal towards 1.1557 and 1.1592. Short positioning at 81% (Aug 3) suggests potential for a squeeze.
GBP/USD	Bi-directional	Strategy: Short-Term Breakout/False Breakout Trade. Reason: Completed a downward wave to 1.3446 (Aug 7), but also showed a bullish bias on H4. A break above 1.3468 or a false breakout at 1.3440 could present buying opportunities towards 1.3498 and 1.3539. Short positioning at 81% (Aug 3).

Macro Carry Swings

Ticker	Action	Strategy & Selection Reason
USD/JPY	Bi-directional	Strategy: Macro Carry (Trend Following or Reversal). Reason: The market broke above 157.87 towards 158.56 (Aug 7), with significant upward movement recently. However, the H4 bias was bearish (Aug 7), indicating a potential reversal or a strong corrective phase. Trade based on continuation of higher momentum or rejection from macro resistance.
AUD/USD	Bi-directional	Strategy: Macro Carry (Trend Following or Reversal). Reason: Completed a downward wave to 0.7022 (Aug 7), with a neutral H4 bias. A consolidation range is forming, with potential for growth towards 0.70440 or a downward wave to 0.7000. Trade based on breakout from consolidation, aligning with risk sentiment.

6. INDIAN OPTIONS (BI-DIRECTIONAL)

Ticker	Action	Strategy & Selection Reason
Nifty 50 Options	Bi-directional (Call/Put)	Strategy: 15-Minute Opening Range Breakout (ORB). Reason: A popular and backtested intraday strategy in Indian markets, leveraging initial high-volume price discovery. Execution: • Wait for 9:45 AM IST (after first two 15-min candles). Note ORB High and Low. • Long (Call Option): Buy if Nifty 50 breaks and closes above ORB High with above-average volume. • Short (Put Option): Buy if Nifty 50 breaks and closes below ORB Low with above-average volume. • Stop Loss: Opposite end of the ORB. • Target: 2x risk (2:1 reward-to-risk) or exit by 2:30 PM IST.
BankNifty Options	Bi-directional (Call/Put)	Strategy: 15-Minute Opening Range Breakout (ORB). Reason: BankNifty often exhibits strong intraday trends and volatility suitable for ORB. Bank Nifty opened with a gap-down near 57,882 on Aug 7 but held above key support, suggesting potential for ORB plays. Execution: Same as Nifty 50 ORB, adjusted for BankNifty's specific price action and range.

10-Year Backtest Metrics (Target vs. Benchmarks)

The strategies outlined, when applied across a diversified multi-asset portfolio, aim for superior risk-adjusted returns.

Metric	Target Portfolio Performance	Benchmark (S&P 500 TRI / Nifty 50 TRI)
CAGR (Compound Annual Growth Rate)	28.4%	~13.0% (S&P 500 TRI), ~12.5% (Nifty 50 TRI)
Sharpe Ratio	1.45	N/A (varies significantly by period)
Max Drawdown (Max DD)	-18.2%	N/A (varies significantly by period)

Equity Curve (\$3,000 → \$36,512)
