📰 SECTION 0: DAILY MACRO & FINANCIAL NEWS DIGEST

1. Global Macro & Central Banks

- The European Central Bank (ECB) has warned that bond market turmoil could exacerbate Europe's economic slowdown, while inflation risks remain tilted upward, posing a dilemma for future interest rate decisions.
- US interest rates remain elevated, though there are signs of them rolling over. The Federal Reserve's hawkish stance suggests a potential for another rate hike, which continues to influence global markets.
- The Indian Rupee has strengthened, recording its strongest weekly gain in seven months, supported by policy measures aimed at stabilizing the currency.

2. US & European Markets

- Wall Street pre-market sentiment is closely tied to ongoing Federal Reserve discussions and the performance of AI-linked stocks. Market movements in these sectors could signal broader directional cues for the opening session.
- The European economy is grappling with sluggish growth and persistent inflation, as indicated by the ECB's assessment.
- France's fiscal concerns continue to be a notable factor in European market stability.

3. Indian Markets & Dalal Street

- Indian benchmark indices, Nifty and Sensex, achieved their best weekly gains in six months, largely propelled by a significant rally in IT stocks. The Nifty 50 closed at 23,146.15, while the Sensex finished at 74,729.27.
- Q2 earnings from major banks, including HDFC Bank and ICICI Bank, are under close scrutiny by investors, providing crucial insights into the financial sector's health.
- Domestic Institutional Investors (DIIs) continue to provide support, offsetting persistent selling by Foreign Institutional Investors (FIIs).
- SEBI has revised its Closing Auction Session (CAS) rules, effective December 7, 2026, and Jio Platforms has announced its upcoming IPO, adding to market dynamics.

4. Commodities & Crypto Wire

- WTI Crude Oil prices surged sharply to $110 per barrel, driven by escalating geopolitical tensions in the Middle East, including intensified attacks in the Strait of Hormuz, Houthi militant actions, and threats to Russian refineries.
- OPEC+ maintained its oil output policy unchanged for October but has trimmed its 2026 global oil demand growth forecast, signaling ongoing market uncertainty.
- Gold (XAU/USD) is currently trading around $4,165-$4,166, with its main trend remaining down. Buyers are defending the lower range, with a key support cluster identified between $4,141 and $4,145. December rate hike risks are capping gold's upside.
- Bitcoin is encountering resistance, struggling to sustain levels above $80,000.
- The US Financial Crimes Enforcement Network (FinCEN) withdrew two proposed rules concerning unhosted wallets and convertible virtual currency (CVC) mixing, potentially easing some regulatory pressures in the crypto space.
