Session Highlight:  London Session Pre-Open Briefing (1 Hr Before Open)

Session News Focus: European macroeconomic releases, ECB/BOE news, Forex short-term futures (EUR/USD, GBP/USD), and Gold (XAU/USD) supply/demand zones.

SECTION 0: DAILY MACRO & FINANCIAL NEWS DIGEST

1. Global Macro & Central Banks

- The European Central Bank (ECB) raised its three key interest rates by 25 basis points on September 10, with the deposit facility rate now at 2.50%, main refinancing operations at 2.65%, and the marginal lending facility at 2.90%. The decision was driven by persistent inflationary pressures, particularly from the ongoing conflict in the Middle East. The ECB's latest staff projections anticipate headline inflation to average 3.0% in 2026, 2.5% in 2027, and 2.1% in 2028. Economic growth for the euro area is projected at 0.9% in 2026, 1.4% in 2027, and 1.5% in 2028, showing greater resilience than previously expected.
- The Bank of England (BOE) held its Bank Rate at 3.75% on September 17, following a 6-3 vote, with three members advocating for a 25 basis point hike. UK CPI inflation rose to 3.1% in August and is expected to increase further, fueled by higher energy prices due to Middle East tensions. Market participants are pricing in potential rate hikes, with expectations for the base rate to reach around 4.5% by March 2027.
- The US Federal Reserve increased its federal funds target range by 25 basis points to 3.75%-4.00% on September 16, citing persistently elevated inflation. Market odds suggest the possibility of further rate hikes by the Fed.
- Global economic growth is projected to slow to 2.6% in 2026, below pre-pandemic levels, with the Middle East conflict and rising energy prices being significant headwinds. Global debt levels continue to be a concern, with sovereign debt surpassing sustainable levels in many major economies.

2. US & European Markets

- US equity markets demonstrated strength in August, with the S&P 500 gaining 2.6% and the Nasdaq Composite rising 3.9%, supported by robust corporate earnings. While September is historically a challenging month for equities, the current market shows technical strength. However, volatility is expected to widen as investors assess the Fed's interest rate path and upcoming economic data.
- Euro area annual inflation climbed to 3.2% in August, up from 2.9% in July, primarily driven by increases in services and energy costs. Consumer inflation expectations have also edged higher. Despite inflationary pressures, the euro area economy has shown resilience, with upward revisions to economic growth projections for 2026 and 2027.

3. Indian Markets & Dalal Street

- Indian equity markets exhibited a mixed performance in August, with the Nifty 50 declining while mid-cap and small-cap segments recorded gains. Foreign Institutional Investors (FIIs) were net buyers in August with inflows of approximately US\$2.4 billion, but turned net sellers in early September, pulling out ₹11,169 crore from Indian equities due to global uncertainties, rising US bond yields, and higher crude oil prices.
- The Indian primary market is experiencing an active IPO season, with 20 companies preparing to launch issues worth over ₹4,152 crore this week. Significant semiconductor investments, including Applied Materials' \$5 billion commitment and Lam Research's ₹10,000 crore expansion, are flowing into India. Crude oil prices, global cues, sector rotation, and institutional flows remain key market drivers.

4. Commodities & Crypto Wire

- Crude oil prices remain volatile, with Brent trading around \$66 per barrel. OPEC+ maintained its oil production quota for October 2026, as disruptions in the Strait of Hormuz due to regional conflict continue to impact tanker flows. OPEC has reduced its 2026 oil demand growth forecast for the fifth consecutive month. Global oil production saw a decline in August due to shut-ins in Gulf output amidst heightened security risks.
- Gold (XAU/USD) is trading around \$4,350, caught between conflicting forces. Hawkish central bank policies are limiting significant upside, but record inflows into physically backed gold ETFs (US\$18 billion in August) and increased safe-haven demand driven by geopolitical risks, particularly in the Middle East, are providing strong structural support. Gold briefly rebounded above \$4,300 after the Fed's rate hike and faces key resistance around \$4,400 with support near \$4,235.
- The Digital Asset Market Clarity Act failed a procedural vote in the US Senate on September 15, which was perceived as a setback for regulatory certainty in the cryptocurrency space. Bitcoin reacted negatively, falling approximately 4% on the news. Bitcoin was trading at \$76,897 as of September 15. Interestingly, Bitcoin's correlation with gold has risen to around +0.5, while its correlation with the Nasdaq has fallen to +0.3, suggesting it is increasingly being viewed as an alternative monetary asset rather than solely a high-beta risk asset.
