Date: July 28, 2026

Session: New York Session Pre-Open Briefing (1 Hr Before Open)

Focus: Wall Street pre-market movers, US Federal Reserve news, mega-cap US stocks (NVDA, MSFT, TSLA), and WTI Crude Oil catalysts.

SECTION 0: DAILY MACRO & FINANCIAL NEWS DIGEST

1. Global Macro & Central Banks

- The Federal Reserve's July meeting begins today, July 28th, with a policy decision expected tomorrow, July 29th. While a rate hike in July is considered unlikely, rising oil prices have increased the probability of a hike later this year. CME Group FedWatch indicates a 36-38% chance of a quarter-point rate increase by Wednesday, up from 16% a week ago, reflecting a more hawkish stance under Chair Kevin Warsh.
- Inflation risks remain elevated due to geopolitical uncertainty in the Middle East and renewed energy price increases.
- Consumer confidence in the US declined in July amidst rising gas prices and escalating conflict between the US and Iran.
- The 10-year Treasury yield has risen to 4.59% (from 4.641% on Monday), and the 30-year yield is at 5.092% (from 5.125% on Monday), reflecting concerns about inflation and potentially "higher for longer" rates.

2. US & European Markets

- US stocks are mixed in pre-market trading, with the Dow Jones Industrial Average rising, while the Nasdaq Composite, heavily weighted with AI stocks, is down.
- Semiconductor and AI-related stocks are experiencing a significant sell-off, stemming from weakness in Asian markets (e.g., South Korea's Kospi down over 10%). Concerns are rising about the sustainability of growth in the AI sector, potential overvaluation, and the impact of lower-cost AI models from China.
- Mega-cap US stocks like Nvidia (NVDA) and Microsoft (MSFT) have seen some pressure, though the "Magnificent Seven" ETF (MAGS) edged up slightly in premarket. Apple (AAPL) briefly reached a \$5 trillion market capitalization ahead of its earnings report.
- Companies like IQVIA Holdings (IQV) and Sherwin-Williams (SHW) saw pre-market gains after reporting stronger-than-expected second-quarter earnings and raising full-year guidance.
- Mercedes and Audi have cut full-year revenue forecasts, citing weaker demand in China.
- Centene Corporation (CNC) reported strong Q2 results and increased its 2026 GAAP diluted EPS guidance.

3. Indian Markets & Dalal Street

- Indian markets are expected to trade cautiously today. While easing crude oil prices and improved global sentiment provided a boost yesterday, a sharp sell-off in Asian technology stocks is likely to keep sentiment subdued.
- Dalal Street snapped a four-session losing streak on Monday, with the Sensex climbing 776 points and the Nifty 50 gaining 229 points, driven by financial and auto stocks due to easing crude prices.
- GIFT Nifty futures are trading around the 24,000 mark, suggesting a largely flat opening for domestic equities.
- Nifty 50 is expected to trade with a cautious undertone, with a sustained move above 24,000 crucial for a constructive phase.
- Bank Nifty opened with a gap-up near 57,117, outperforming the broader market. The 57,300-57,400 zone acts as immediate resistance.

4. Commodities & Crypto Wire

- WTI Crude Oil is trading near \$81.00 after recovering from a one-week low, as optimism around US-Iran diplomatic talks eased geopolitical risk premiums. However, ongoing risks around the Bab el-Mandeb and Strait of Hormuz continue to provide some support for oil prices.
- A Reuters poll has doubled the 2026 oil deficit forecast to 1.5 million barrels a day, suggesting that current price weakness might not fully reflect tighter supply.
- Gold prices started a recovery from the \$3,960 region and cleared a key bearish trend line at \$4,035. Immediate resistance is around \$4,085, with a major resistance at \$4,145.
- Bitcoin (BTC) dropped below \$64,000, down 2.36% in premarket trading, amidst a broader technology sell-off, Federal Reserve uncertainty, and stalled crypto legislation progress.
