Session Highlight:  New York Session Pre-Open Briefing (1 Hr Before Open)

Session News Focus: Wall Street pre-market movers, US Federal Reserve news, mega-cap US stocks (NVDA, MSFT, TSLA), and WTI Crude Oil catalysts.

SECTION 0: DAILY MACRO & FINANCIAL NEWS DIGEST

1. Global Macro & Central Banks

- **US Federal Reserve:** The Federal Reserve recently hiked the federal funds rate by 25 basis points (bps) to a target range of 3.75%-4.00% at its September 2026 FOMC meeting, marking its first increase since 2023. This hawkish stance is primarily aimed at combating persistent inflation, with Fed Chair Kevin Warsh emphasizing price stability. Projections from the FOMC participants indicated stronger growth, higher inflation, and lower unemployment, with a median expectation for at least one more rate hike this year. However, some Fed officials, like New York Fed President John Williams, have suggested there is "no urgency" for immediate further rate increases, which contributed to a retreat in US Treasury yields today.
- **European Central Bank (ECB):** The ECB also raised its three key interest rates by 25 bps in September 2026, bringing the deposit facility rate to 2.50%. This was the second rate hike this year, driven by inflation pressures exacerbated by the Middle East conflict and energy shock. Despite inflation remaining above target, the ECB revised its economic growth projections for 2026 and 2027 upwards, citing the euro area economy's greater-than-expected resilience.
- **Currency Drivers:** The US Dollar strengthened against the Euro in September, driven by stronger US economic data and expectations of a more hawkish Fed relative to the ECB. EUR/USD remains under pressure due to Eurozone economic weakness. USD/JPY has seen increased intervention risk as the pair approaches 161.00, with potential for the Bank of Japan to hike interest rates.

2. US & European Markets

- **Wall Street Futures & Index Momentum:** US equities ended lower on Tuesday, weighed down by rising Treasury yields, with the 30-year Treasury yield crossing 5.6%. However, some Asian markets showed gains today despite the weaker Wall Street performance. Market sentiment remains cautious, influenced by inflation concerns and central bank policies.
- **Mega-cap Tech & Semiconductor Developments:** Significant investment in Artificial Intelligence (AI) data centers and hardware is creating short-term inflationary pressure due to high demand for memory chips and construction. This suggests underlying strength in the semiconductor sector and for key mega-cap tech players like NVIDIA (NVDA) and Microsoft (MSFT).

3. Indian Markets & Dalal Street

- **Sensex/Nifty Updates:** Indian benchmark indices, the Sensex and Nifty 50, opened lower today amidst mixed global cues and volatile crude prices. However, the Sensex staged a notable recovery to close 0.32% higher, with the Nifty also finding support. Analysts expect market direction to depend on oil prices and key technical levels.
- **Corporate Earnings:** The upcoming corporate earnings season is anticipated to influence sectoral sentiment, with some key results, like Manipal Payment's, due on October 1st.
- **FII/DII Institutional Flows:** Foreign Institutional Investors (FIIs) have been net sellers in the Indian equity market in late September, with significant outflows. Conversely, Domestic Institutional Investors (DIIs) have shown strong buying interest, providing a liquidity cushion and absorbing much of the FII selling.
- **Sectoral Momentum:** The Information Technology (IT) sector was a standout performer today, surging over 5%, and leading the market's recovery. Manufacturing activity in India accelerated in September, contributing to positive industrial output data.

4. Commodities & Crypto Wire

- **Crude Oil Geopolitics & OPEC+:** OPEC+ decided in early September 2026 to maintain its oil production targets for October, completing the rollback of voluntary cuts implemented in 2023. A separate layer of roughly 2 million bpd in cuts from 2022 remains in place until the end of 2026. Geopolitical tensions, particularly in the Middle East and concerns over attacks on energy infrastructure, continue to generate volatility and impact supply. Today, Brent crude saw a sharp pullback, easing some immediate supply concerns.
- **Gold Supply/Demand:** Gold's market drivers are generally linked to inflation concerns and geopolitical stability. Given persistent inflation and ongoing global tensions, demand for safe-haven assets like gold remains a factor.
- **Major Crypto Regulatory/Adoption Headlines:** The crypto sector is experiencing maturing oversight, with significant regulatory proposals from the Federal Reserve regarding stablecoin issuers and personnel changes at the SEC. The SEC also granted a temporary innovation exemption for on-chain trading of tokenized US stocks. Outgoing SEC Commissioner Hester Peirce noted that increased crypto adoption under new rules will make it harder to reverse these technologies. Furthermore, 75% of US banks are now operating active blockchain programs, highlighting accelerated institutional adoption.
- **Crypto Market:** Bitcoin has recently reclaimed the \$85,000 area, reaching an eight-month high above \$87,000. This recovery is attributed to ETF inflows, short covering, and improving regulatory sentiment. Altcoins are showing signs of outperforming Bitcoin, with some analysts noting the potential start of an "altseason."
