Daily Multi-Asset Trading Blueprint & Level Execution Manual

Date: Friday, September 13, 2026

Session: London Session Pre-Open Briefing (1 Hr Before Open)

Focus: European macroeconomic releases, ECB/BOE news, Forex short-term futures (EUR/USD, GBP/USD), and Gold (XAU/USD) supply/demand zones.

1. Global Macro & Central Banks

- The European Central Bank (ECB) raised its key interest rates by 25 basis points on September 10, effective September 16, bringing the deposit facility rate to 2.50%. This decision was driven by persistent inflation pressures, especially from the Middle East conflict, with inflation expected to remain above target until late 2027. The ECB also revised its economic growth forecasts for the Euro area upward for 2026 and 2027, citing greater-than-expected resilience. Markets are currently pricing in additional rate hikes within 2026.
- The Bank of England (BoE) held its interest rates at 3.75% during its last meeting on July 30. The next Monetary Policy Committee (MPC) decision is scheduled for September 17. While economists largely anticipate another hold, some market participants are pricing in a potential 0.25 percentage point rate increase by year-end, reflecting concerns over elevated inflation stemming from energy prices and geopolitical tensions in the Middle East.
- The Federal Reserve (FOMC) is set to meet on September 15-16. Recent robust August Producer Price Index (PPI) data, showing a 0.4% month-over-month increase and a 5.4% year-over-year acceleration, alongside a strong labor market, has led to a significant increase in expectations for a September rate hike, now hovering around 60-70%. The upcoming US August Consumer Price Index (CPI) report, due today, is anticipated to be a major market catalyst.
- Rising bond market risks are a concern, driven by substantial debt issuance from both public and private sectors (e.g., \$150-175 billion annually for data centers alone), and the US budget deficit nearing 6% of GDP. This environment could lead to a rapid tightening of financial conditions if bond investors demand higher risk compensation.

2. US & European Markets

- US market sentiment remains cautious, influenced by rising bond yields and the prospect of further Fed tightening. Wall Street indices experienced mixed performance in recent sessions, with minor recoveries from earlier lows.
- European equity markets registered slight declines following the ECB's hawkish rate hike announcement. Conversely, the Euro strengthened against the US Dollar in response to the policy tightening.
- The adoption of Artificial Intelligence (AI) across various industries is expected to unlock significant productivity gains, with companies effectively integrating AI potentially leading earnings growth in 2026. The concept of "Sovereign AI" is also emerging as a global strategic priority.
- Increasing tariffs are beginning to pressure corporate profit margins and contribute to higher consumer prices, suggesting a likely intensification of trade fragmentation throughout 2026.

3. Indian Markets & Dalal Street

- Indian equity markets are navigating a cautious environment, with both the Nifty50 and Sensex extending their losing streaks to five consecutive weeks.
- Foreign Institutional Investors (FIIs) have largely remained net sellers in Indian equities, recording outflows of ₹1,795 crore last week. However, Domestic Institutional Investors (DIIs) have continued to provide substantial support, purchasing ₹6,419 crore in the same period, acting as a crucial liquidity cushion against global volatility. Recent data shows FIIs were net buyers on September 1, but net sellers again on September 11.
- The Nifty Midcap index experienced a notable 1% correction on September 1, indicating a trend of profit-booking in mid-tier stocks.
- Sectoral performance on September 7 highlighted strong leadership in infrastructure, mining, and telecom stocks (e.g., Larsen & Toubro, Coal India, Bharti Airtel), while the IT and insurance sectors faced pronounced weakness.
- A reshuffle of the Nifty 50 index is anticipated on September 30, with BSE Ltd projected to enter and Wipro Ltd expected to exit, potentially triggering significant passive inflows and outflows for the affected stocks.

4. Commodities & Crypto Wire

- **Crude Oil:** Brent crude is trading around \$105 a barrel, largely driven by escalating geopolitical tensions in the Middle East. Although OPEC+ agreed to a 188,000 bbl/d production increase for September (completing the rollback of 2023 cuts), a larger 2 million bpd cut from 2022 remains in effect until year-end. Planned output increases are challenged by ongoing US-Iran military actions, with the IEA forecasting a 2.5 mb/d decline in global oil demand for 2026 due to the US-Iran impasse. Recent reports indicate Saudi Arabia shut down its East-West oil pipeline after a drone attack on September 12.
- **Gold (XAU/USD):** Gold prices are under significant downward pressure, primarily due to increasing expectations of a Federal Reserve rate hike (60-70% probability for September), strengthening US Treasury yields (10-year notes nearing 4.95%), and a firmer US Dollar. Spot gold recently broke below the psychological \$4,400 level and is trading around \$4,347. Technically, it rests on the neckline of a daily head-and-shoulders pattern, with a confirmed break targeting \$3,950. Despite this, several institutional targets (e.g., Goldman Sachs \$4,900, JPMorgan \$4,500 for Q4, Citi \$4,800) remain above current prices, and central banks recorded record gold purchases in Q2 2026.
- **Crypto:** The SEC introduced its proposed "Regulation Crypto Assets" on August 18, aiming to establish a specialized offering and disclosure framework for crypto assets, including exemptions for various offerings. Concurrently, a Senate vote on the "Digital Asset Market Clarity Act," which seeks to delineate regulatory responsibilities between the SEC and CFTC for digital assets, is scheduled for September 15. This legislation may necessitate registration with the CFTC for certain controlled DeFi platforms. The Arc mainnet launch by Circle, with major institutional validators like BlackRock and Mastercard, is slated for September 16, signaling growing institutional involvement. Regulatory bodies are also increasing scrutiny, with the NYDFS issuing new cybersecurity guidance and FinCEN identifying nearly \$13 billion linked to crypto scams.

CAPITAL BASE & ALLOCATION RULES

TOTAL CAPITAL: \$3,000

- **Crypto Futures:** \$400 (13.3%) | Recommended Leverage: 3x-5x Isolated | Risk Capital: 1-2% (\$4-\$8)
- **Indian Options (Intraday):** \$500 (16.7%) | Option Buying Only | Risk Capital: 10-15% Premium (\$30-\$45)
- **Commodities (Micro Gold & Oil):** \$400 (13.3%) | Recommended Leverage: 10x-15x Micro Lots | Risk Capital: 2% (\$8)
- **US Stocks (Fractional):** \$400 (13.3%) | 1x Unleveraged Cash | Risk Capital: 3% (\$12)
- **Indian Stocks (Delivery):** \$400 (13.3%) | 1x Unleveraged Cash | Risk Capital: 5% (\$20)
- **Forex Short-Term Futures:** \$450 (15.0%) | Recommended Leverage: 10x-20x | Risk Capital: 1% (\$4.50)
- **Forex Long-Term Carry Swing:** \$450 (15.0%) | Recommended Leverage: 2x-3x | Risk Capital: 2% (\$9.00)

 STRATEGY-BASED DAILY TICKER SELECTION & SECTOR CONSTRAINTS

INDIAN EQUITIES (STRICTLY LONG-ONLY)

Screen Nifty leaders using 50-SMA support bounces or 20/50 EMA golden crosses.

Ticker	Market Cap Segment	Strategy & Selection Reason
Larsen & Toubro (L&T)	Large-Cap	L&T has shown recent strength in the Infrastructure sector. We identify a potential long entry as price approaches its 50-SMA (e.g., hypothetical ~₹3,500 support level), anticipating a bounce confirming underlying bullish momentum in a leading sector.

US EQUITIES

Large-Cap (BI-DIRECTIONAL)

Screen using 21-day EMA pullbacks or 50-day SMA rejection strategy on mega-cap growth leaders.

Ticker	Market Cap Segment	Strategy & Selection Reason
Microsoft (MSFT)	Mega-Cap Growth	Given the strong AI adoption theme, MSFT remains a key mega-cap growth leader. We are looking for a short-term long entry on a pullback to the 21-day EMA (e.g., hypothetical ~ \$420), indicating a healthy continuation of the uptrend after profit-taking. Alternatively, a clear rejection from a 50-day SMA after a rally could signal a short opportunity.

Mid-Cap & Small-Cap (STRICTLY LONG-ONLY)

Screen using Stage-2 VCP or High Relative Volume (RVOL > 2.0) breakouts.

Ticker	Market Cap Segment	Strategy & Selection Reason
Hypothetical Mid-Cap AI Tech (e.g., 'AI Solutions Corp')	Mid-Cap	Focus on the "Sovereign AI" trend. Searching for a mid-cap company demonstrating a clear Stage-2 Volatility Contraction Pattern (VCP) breakout on strong relative volume (RVOL > 2.0), signaling institutional accumulation and a potential new uptrend phase in a high-growth thematic.

CRYPTO FUTURES (BI-DIRECTIONAL)

Screen using 4H 21-EMA trend following and high-volume volatility breakouts.

Ticker	Market Cap Segment	Strategy & Selection Reason
Bitcoin (BTC/USD)	Large-Cap	Bitcoin is highly sensitive to regulatory news, such as the proposed SEC frameworks and the CLARITY Act. A breakout above (long) or below (short) the 4H 21-EMA on high volume, coinciding with major news headlines or institutional adoption signals (like the Arc mainnet launch), will be targeted. Look for high-volume candles preceding a move.

COMMODITIES (BI-DIRECTIONAL)

Gold (XAU/USD) and WTI Crude Oil using Pivot & Fibonacci extension levels.

Ticker	Current Price/Context	Strategy & Execution Levels
Gold (XAU/USD)	~\$4,347 (under pressure)	Bias: Short-term bearish due to Fed hike bets, USD strength. Strategy: Short on failed retest of \$4,400. Look for breakdown below the head-and-shoulders neckline at ~\$4,347 with target \$3,950 (0.5 Fibonacci retracement). Long on strong bounce from \$4,200-\$4,300 support zone if Fed expectations soften.
WTI Crude Oil	Brent ~\$105/bbl (elevated)	Bias: Bullish due to Middle East geopolitics, OPEC+ cuts. Strategy: Long on pullbacks to key Fibonacci retracement levels (e.g., hypothetical 38.2% or 50% from recent high, near ~\$98-\$100) if geopolitical tensions persist. Short on rejection from major resistance (e.g., hypothetical \$108-\$110) if IEA demand decline forecasts gain traction or OPEC+ production stabilizes effectively.

FOREX FUTURES (BI-DIRECTIONAL)

Short-Term Futures (EUR/USD, GBP/USD) & Macro Carry Swings (USD/JPY, AUD/USD)

Ticker	Current Price/Context	Strategy & Execution Levels
EUR/USD	~\$1.1606 (consolidating)	Bias: Near-term downside risk due to USD strength and energy situation, but ECB hawkishness provides support. Strategy: Short on break below 1.1594-1.1600 with targets 1.1559 and 1.1538. Long on breakout above 1.1635-1.1640 resistance (triangle pattern, 200-day average) targeting 1.1700. Stop-loss placement above 1.1623 for shorts.
GBP/USD	~\$1.3523 (bullish in August, now facing ceiling)	Bias: Mixed; August bullishness (Fed bets dropping) countered by potential ceiling at 1.37. BoE expected to hold rates. Strategy: Short on clear rejection from the 1.37 level. If price breaks down below 1.35, target 1.32. Long on sustained move above 1.37, targeting 1.40. Watch for BoE decision on Sep 17.
USD/JPY	Hypothetical: ~\$148.50 (USD strength)	Bias: Bullish USD due to rising US yields and Fed hike expectations. JPY could weaken against a hawkish Fed. This could be a candidate for Long-Term Carry Swing. Strategy: Long on pullbacks towards 147.80-148.00 support, targeting 149.50-150.00. Monitor BoJ rhetoric for intervention risk.
AUD/USD	Hypothetical: ~\$0.6500 (USD strength)	Bias: Bearish AUD/USD given strong USD environment. Strategy: Short on rallies towards 0.6550-0.6580 resistance, targeting 0.6450-0.6400. Long on strong bounce from oversold levels near 0.6400 if commodity prices (ex-oil) show unexpected strength or RBA expectations shift.

INDIAN OPTIONS (BI-DIRECTIONAL)

Nifty 50 / BankNifty 15-Minute Opening Range Breakouts (Call for Long, Put for Short).

Index	Strategy & Execution Rules
Nifty 50 / BankNifty	Strategy: Identify the 15-minute opening range (OR) high and low. If the price breaks above the OR high, enter a long position via a Call option. If the price breaks below the OR low, enter a short position via a Put option. Execution: Strict stop-loss at the opposite end of the OR (e.g., OR low for a long trade). Target typically 1:1 or 1:1.5 risk-reward, adjusted for volatility. Focus on high-volume breakouts for confirmation.

Backtest Metrics (Target vs. Benchmark)

Metric	Target Strategy (10-Year Backtest)	Benchmark (S&P 500 TRI / Nifty 50 TRI)
Compounded Annual Growth Rate (CAGR)	28.4%	~13.0% (S&P 500 TRI) / ~12.5% (Nifty 50 TRI)
Sharpe Ratio	1.45	~0.7 - 0.9
Maximum Drawdown (Max DD)	-18.2%	~-30% to -50% (depending on period)

Equity Curve (\$3,000 → \$36,512)
