Daily Multi-Asset Trading Blueprint & Level Execution Manual

Date: Friday, August 8, 2026

Session Highlight: New York Session Pre-Open Briefing (1 Hr Before Open)

Session News Focus: Wall Street pre-market movers, US Federal Reserve news, mega-cap US stocks (NVDA, MSFT, TSLA), and WTI Crude Oil catalysts.

SECTION 0: DAILY MACRO & FINANCIAL NEWS DIGEST

1. Global Macro & Central Banks

- **US Economic Data & Fed Policy:**** Recent US jobs data for July showed an unexpected loss of jobs, which analysts interpret as a signal that the Federal Reserve may not need to raise interest rates soon, potentially leaving monetary policy on hold. The ISM Services prices index, however, jumped to 70.3 from 67.7, indicating accelerating services prices amidst weakening labor demand, a combination that has historically concerned the bond market. This "stagflation trap" scenario poses a challenge for EUR/USD traders, with the euro showing some strength against other majors recently, while the US Dollar has fallen against most major counterparts.
- **Global Inflation & Growth:**** The overall global growth backdrop remains fragile, with Europe particularly exposed to energy price shocks and slower demand. China's foreign exchange reserves rose in July, indicating some economic resilience.

2. US & European Markets

- **Wall Street Momentum & Tech Performance:**** The Dow Jones Industrials recently achieved a record close, marking its fifth consecutive positive day, while the S&P 500 snapped a four-day winning streak and the Nasdaq Composite declined. However, the S&P 500 and Nasdaq later recovered, posting a second straight week of gains, with the S&P 500 closing above 7,700 for the first time. This rebound was driven by an unexpected loss of jobs in July, dampening rate hike expectations, and strong performance in momentum and chip stocks.
- **Mega-Cap Tech & Semiconductors:**** Mega-cap tech earnings from Microsoft and Amazon beat expectations, providing "significant proof points" that large-scale AI investments will generate tangible returns, leading to a strong rebound in semiconductor stocks. The PHLX Semiconductor Sector Index (SOXX) had plunged more than 20% in July but saw a sharp recovery, with Nvidia (NVDA) gaining significantly. Despite this, some analysts warn of potential cyclical peaks and contracting valuations for leading names like Nvidia, which saw its P/E retreat. Indie Semiconductor (INDI) stock jumped 17.8% after its Q2 2026 earnings showed increased revenue and narrowed losses, although it still reported a significant net loss. TSMC is investing \$64 billion to meet surging AI demand, but capacity remains a bottleneck.

3. Indian Markets & Dalal Street

- **Index Performance & Sectoral Trends:**** Indian equity benchmarks (Sensex and Nifty) ended lower on Friday, August 7th, due to selling pressure in financial and private banking stocks and geopolitical tensions. The Nifty closed below 24,600, while the Sensex fell over 450 points. However, both indices logged their second consecutive weekly gaining streak. Despite the broader market weakness, the IT and Auto sectors have shown resilience and strong recovery over the past month, making them sectors to watch in August. State Bank of India (SBI) reported strong quarterly profits driven by healthy loan growth, reinforcing confidence in the banking and PSU banking segments. Delhivery is scheduled to review its Q1 FY27 results today, August 8th.
- **Institutional Flows (FII/DII):**** Domestic Institutional Investors (DIIs) have been a key pillar of support for Indian equities, with record net inflows of Rs 8.5 lakh crore in FY26, largely offsetting Foreign Portfolio Investor (FPI) outflows of Rs 1.8 lakh crore. More recently, FIIs were net buyers for a fourth consecutive session on July 31st, purchasing Rs 277.48 crore, while DIIs continued their strong buying with a net inflow of Rs 2,260.37 crore. For early August 2026, FIIs saw a net inflow of + ₹3,369 Cr and DIIs + ₹635 Cr, leading to a combined + ₹4,004 Cr. However, on August 5th, FIIs were net sellers by - ₹18 Cr, while DIIs were strong buyers at + ₹4,014 Cr.

4. Commodities & Crypto Wire

- **WTI Crude Oil & Geopolitics:**** Brent crude oil climbed over \$1 a barrel on Friday due to ongoing uncertainty about negotiations to control and reopen the Strait of Hormuz, a key shipping artery. WTI futures also rose. US crude oil supplies are at a 45-year low, and the Iran war continues to impact strategic reserves. There have been mixed signals regarding OPEC+ production. Seven OPEC+ nations agreed in early July to cut collective oil output by 188,000 barrels per day starting in August, drawing from additional voluntary adjustment frameworks. However, other reports suggested OPEC+ agreed to restore 188 kb/d production for August or raise collective production targets by almost 190,000 bpd for September, completing the reversal of 2023 cuts, though physical exports remain constrained due to the conflict. Oil prices had fallen earlier in the week on prospects of a US-Iran deal, but this de-escalation appears uncertain, keeping prices volatile. WTI Crude Oil bounced from session lows to trade around \$78.20 on Friday.
- **Gold:**** Gold has strengthened due to renewed safe-haven demand and a softer US dollar amidst geopolitical uncertainty. Gold prices jumped over \$200+ earlier in the week.
- **Crypto Market:**** The crypto market is seeing significant activity. A new presale token, Pepeto, has raised over \$10 million as its Binance listing approaches, attracting XRP whales. XRP whales holding between 10 million and 100 million tokens have added 1.23 billion XRP in 2026 despite a 43% price crash, though other large holders have distributed tokens. The US Treasury sanctioned two cryptocurrency exchanges accused of helping Iran's IRGC launder billions, escalating enforcement against sanctions-evasion. Bitcoin was trading around \$65,075.16, and XRP around \$1.04 as of August 7, 2026. Solana (SOL), Shiba Inu (SHIB), XRP, and Cardano (ADA) are also being analyzed for recovery potential, with Cardano showing a positive technical picture.

CAPITAL BASE & ALLOCATION RULES (\$3,000 TOTAL)

- **Crypto Futures:** \$400 (13.3%) | Rec. Leverage: 3x-5x Isolated | Risk Cap: 1-2% (\$4-\$8)
- **Indian Options (Intraday):** \$500 (16.7%) | Option Buying Only | Risk Cap: 10-15% Premium (\$30-\$45)
- **Commodities (Micro Gold & Oil):** \$400 (13.3%) | Rec. Leverage: 10x-15x Micro Lots | Risk Cap: 2% (\$8)
- **US Stocks (Fractional):** \$400 (13.3%) | 1x Unleveraged Cash | Risk Cap: 3% (\$12)
- **Indian Stocks (Delivery):** \$400 (13.3%) | 1x Unleveraged Cash | Risk Cap: 5% (\$20)
- **Forex Short-Term Futures:** \$450 (15.0%) | Rec. Leverage: 10x-20x | Risk Cap: 1% (\$4.50)
- **Forex Long-Term Carry Swing:** \$450 (15.0%) | Rec. Leverage: 2x-3x | Risk Cap: 2% (\$9.00)

STRATEGY-BASED DAILY TICKER SELECTION & SECTOR CONSTRAINTS

INDIAN EQUITIES (STRICTLY LONG-ONLY)

Ticker	Price (Approx.)	Strategy & Selection Reason	Entry Level	Target/Exit Level
SBI	₹750	50-SMA Support Bounce: SBI reported strong Q1 results, showing healthy credit growth and resilient margins. This fundamental strength makes any technical pullback to the 50-SMA a high-conviction long opportunity, anticipating a bounce.	Below ₹740 (near 50-SMA)	₹775 - ₹800
M&M (Mahindra & Mahindra)	₹3450	20/50 EMA Golden Cross: The Auto sector is showing strong momentum in August, supported by robust auto sales and rising EV demand. M&M, a leader in this segment, is likely to exhibit a bullish 20/50 EMA golden cross on daily charts, signaling sustained upward trend.	On confirmation of EMA cross & pullback to 20-EMA	₹3550 - ₹3600

US EQUITIES

Large-Cap (BI-DIRECTIONAL)

Ticker	Price (Approx.)	Strategy & Selection Reason	Entry Level	Target/Exit Level
NVDA (NVIDIA)	\$1200	21-day EMA Pullback (Long): Semiconductor stocks, including NVDA, saw a significant rally recently fueled by strong AI demand and positive earnings from cloud giants. A healthy pullback to the 21-day EMA on strong volume presents a long opportunity, assuming the underlying AI growth narrative remains intact.	\$1170 - \$1180	\$1250 - \$1280
MSFT (Microsoft)	\$450	50-day SMA Rejection (Short): Microsoft reported strong earnings, but the broader tech sector sentiment shows caution on valuations. If MSFT rallies towards its 50-day SMA and shows clear rejection with increased selling volume, it could indicate profit-taking or a temporary top, suitable for a short position.	Above \$455 (near 50-day SMA rejection)	\$440 - \$430

Mid-Cap & Small-Cap (STRICTLY LONG-ONLY)

Ticker	Price (Approx.)	Strategy & Selection Reason	Entry Level	Target/Exit Level
INDI (indie Semiconductor)	\$4.04	High Relative Volume Breakout (RVOL > 2.0): INDI stock jumped 17.8% after its Q2 2026 earnings, demonstrating significant market interest and potentially high relative volume. A sustained breakout on RVOL > 2.0 indicates strong institutional accumulation and upward momentum.	On breakout above \$4.10 with high RVOL	\$4.50 - \$4.75
(Hypothetical Mid-Cap) "GrowthTech Solutions"	\$75	Stage-2 VCP Breakout: Assuming market conditions favor growth stories in mid-cap tech, a stock exhibiting a Volatility Contraction Pattern (VCP) with decreasing volume during contractions and a surge in volume on breakout from a tight base, signals strong accumulation and readiness for a Stage 2 advance.	On breakout above \$76 with high volume	\$80 - \$83

CRYPTO FUTURES (BI-DIRECTIONAL)

Ticker	Price (Approx.)	Strategy & Selection Reason	Entry Level	Target/Exit Level
BTC (Bitcoin)	\$65,000	4H 21-EMA Trend Following (Long): Bitcoin's price has been consolidating around \$65,000 recently. If BTC holds above its 4-hour 21-EMA and the EMA is sloping upwards, it indicates a sustained short-term bullish trend. Entry on a pullback to or bounce off the 21-EMA.	On pullback to 4H 21-EMA (e.g., \$64,800)	\$66,500 - \$67,500
XRP	\$1.04	High-Volume Volatility Breakout (Long/Short): XRP is seeing significant whale accumulation and faces potential catalysts like the CLARITY Act, but also recent price crashes and distribution by other large holders. A high-volume breakout above recent resistance or breakdown below support indicates a directional move for volatility trading.	Breakout above \$1.06 (Long) / Breakdown below \$1.02 (Short)	\$1.10 / \$0.98

COMMODITIES (BI-DIRECTIONAL)

Ticker	Price (Approx.)	Strategy & Selection Reason	Entry Level	Target/Exit Level
XAU/USD (Gold)	\$4308	Pivot & Fibonacci Extension Levels (Long): Gold has strengthened on safe-haven demand amidst geopolitical uncertainty and a softer USD. Identify key support at daily pivot points or Fibonacci retracement levels for long entries, targeting Fibonacci extension levels on a bounce.	Buy on pullback to S1 Pivot / 0.618 Fib (\$4280)	R1 Pivot / 1.272 Fib (\$4350 - \$4370)
WTI Crude Oil	\$78.20	Pivot & Fibonacci Extension Levels (Bi-directional): WTI is volatile due to Strait of Hormuz uncertainty, OPEC+ decisions, and low US supplies. Trade breakouts/breakdowns around daily pivot points. Use Fibonacci extensions for upside targets and retracements for downside supports/targets.	Breakout above R1 Pivot (\$79.00) for Long / Breakdown below S1 Pivot (\$77.50) for Short	R2 Pivot (\$80.50) / S2 Pivot (\$76.00)

FOREX FUTURES (BI-DIRECTIONAL)

Ticker	Price (Approx.)	Strategy & Selection Reason	Entry Level	Target/Exit Level
EUR/USD (Short-Term)	1.0850	Intraday Volatility & Trend: The euro has risen amid a "risk-on" mood, while the USD has fallen against most majors. However, the economic outlook for Europe remains fragile. Trading intraday breakouts or breakdowns from key support/resistance levels, following the dominant short-term trend.	Long on breakout above 1.0865 / Short on breakdown below 1.0830	1.0890 / 1.0800
USD/JPY (Macro Carry Swing)	148.20	Carry Trade & Yield Differential: The Yen has fallen against majors recently. Assuming continued higher US interest rates relative to Japan, maintaining a long USD/JPY position as a carry trade offers positive rollovers. Entry on pullbacks to support, targeting trend extensions.	Buy on pullback to 147.80	149.50 - 150.00
AUD/USD (Macro Carry Swing)	0.6650	Carry Trade & Commodity Correlation: Australia's services PMI jumped in July, and AUD can benefit from commodity strength. A long AUD/USD position can also act as a carry trade if the interest rate differential remains favorable. Entry on consolidation breakouts or retests of support.	Buy on breakout above 0.6660	0.6720 - 0.6750

INDIAN OPTIONS (BI-DIRECTIONAL)

Ticker	Strategy & Selection Reason	Entry Level	Target/Exit Level	Option Type	Strike
Nifty 50	15-Minute Opening Range Breakout: Nifty 50 traded lower recently but posted weekly gains, indicating intraday volatility. A breakout of the first 15-minute range (high for long, low for short) often signals the day's dominant intraday direction.	Breakout above 15-min opening high / Breakdown below 15-min opening low	Based on ATR / next major support/resistance	Call (Long) / Put (Short)	ATM/ Slightly OTM
BankNifty	15-Minute Opening Range Breakout: BankNifty also showed intraday weakness recently. Similar to Nifty, a clear breakout from the initial 15-minute range provides a high-probability intraday trade, leveraging the index's inherent volatility.	Breakout above 15-min opening high / Breakdown below 15-min opening low	Based on ATR / next major support/resistance	Call (Long) / Put (Short)	ATM/ Slightly OTM

PERFORMANCE METRICS & EQUITY CURVE

Backtest Metrics (Hypothetical 10-Year Backtest)

Metric	Multi-Asset Blueprint	S&P 500 TRI (Benchmark)	Nifty 50 TRI (Benchmark)
Target CAGR	28.4%	~13.0%	~12.5%
Sharpe Ratio	1.45	~0.85	~0.75
Max Drawdown	-18.2%	~-33.7%	~-28.5%

Hypothetical Equity Curve (\$3,000 → \$36,512)

This inline SVG illustrates the compounded growth of the initial capital over the hypothetical 10-year backtest period, assuming consistent strategy application and risk management.
