📰 SECTION 0: DAILY MACRO & FINANCIAL NEWS DIGEST

1. Global Macro & Central Banks

- Federal Reserve Chairman Kevin Warsh stated that he won't prejudge upcoming interest rate decisions in October and December meetings, though stubbornly elevated US inflation may lead to further hikes. The Fed increased its key interest rate by a quarter-point to approximately 3.9% in September, its first increase in three years. The FOMC's October 28th meeting is widely expected to hold rates steady, with a hike more firmly expected in December. The Beige Book released on October 14, 2026, indicated mixed conditions in manufacturing and stable commercial real estate, but slight weakening in agriculture, residential real estate, and financial services.
- UK inflation jumped to a hotter-than-expected 3.5% in the 12 months to September, driven by surging motor fuel costs, cementing expectations for a rate hike.
- Japan's Finance Minister Satsuki Katayama indicated that the economy is on the cusp of shifting to a period of sustained inflation driven by rising wages, moving beyond price rises driven by higher import costs.
- The Indian Rupee is expected to weaken further despite a contraction in the current account deficit due to tighter global financial conditions and persistent foreign portfolio outflows. The rupee has depreciated 5% this calendar year and is the fourth-worst performing currency in Asia.

2. US & European Markets

- US stock futures rose early Wednesday as investors assessed September quarter earnings. Nasdaq 100 futures were up 0.50%, S&P 500 futures up 0.22%, and Dow Jones Industrial Average futures up 0.01% as of 5:35 a.m. EDT on October 21. World shares were mostly higher following a broad rally on Wall Street.
- SpaceX stock soared about 10% in pre-market trading after reporting 161% growth in Q3 2026 revenue. Elon Musk also indicated that SpaceX and Tesla have formed special committees to discuss a potential merger, which could create a combined market value of $3.5 trillion.
- Super Micro Computer (SMCI) rallied 12% in pre-market trading after forecasting Q1 revenue between $18.5 billion and $19.5 billion, comfortably above analysts' expectations, signaling robust AI data center demand. Other server makers Dell and Hewlett Packard Enterprise also saw gains.
- Netflix (NFLX) stock fell more than 6% after its mixed Q3 results and advertising and revenue guidance disappointed investors.
- Megacap stocks like Nvidia (NVDA), Microsoft (MSFT), Meta, and Tesla (TSLA) have been driving Wall Street higher, with the Nasdaq reaching record highs. Nvidia, in particular, remains a clear driver of the artificial-intelligence trade. However, divergence is noted among the Magnificent 7, with Tesla up over the past week while Microsoft fell. Concerns about the AI trade and rising debt levels have also been noted.
- European markets also saw gains, with Germany's DAX rising 0.5%, Paris's CAC 40 adding 0.5%, and Britain's FTSE 100 edging 0.1% higher.
- The BBC announced a major shake-up to save £500 million over the next two years, which could mean up to 2,000 job cuts and channels like BBC Three and BBC Scotland moving online-only.

3. Indian Markets & Dalal Street

- Indian equity benchmarks ended lower on Wednesday, with the Sensex declining 143.21 points to 73,709.69 and the Nifty 50 dropping 77.60 points to 22,811.35. This decline was attributed to concerns over rising crude oil prices, which erased early gains.
- The information technology sector was the standout performer, with the Nifty IT index rising 2.52%, while auto, metal, banking, realty, and media sectors ended under pressure.
- Corporate earnings and institutional flows (FII/DII) will be key drivers. For instance, Titan Company reported a slight decline in stock price, and Coal India also saw a price drop.

4. Commodities & Crypto Wire

- Crude oil prices rose due to concerns about risks to oil infrastructure in Saudi Arabia and shipping via the Red Sea. Brent crude futures were up 1.01% to $109.89 per barrel, and WTI crude futures rose 1.12% to $98.92 per barrel. Earlier, Brent crude hit fresh five-month highs before plunging, then rebounded above $110 per barrel. Attacks in the Middle East have pushed Brent above $111 and WTI back above $100. The WTI crude oil contract is currently very bullish due to Middle East tensions and US oil production shutdowns in the Gulf of Mexico. However, some analysts suggest crude oil may be overbought without fresh catalysts.
- Gold declined 0.49% to Rs 1,45,803 per 10 grams in the Indian market, while silver prices dropped 1.15%.
- The crypto market is influenced by global sentiment, with continued focus on regulatory developments and adoption. (No specific crypto headlines from search results for Oct 21, 2026, implying a neutral or continuation of existing trends).
