Daily Multi-Asset Trading Blueprint & Level Execution Manual

Date: August 7, 2026

Session Highlight: New York Session Pre-Open Briefing (1 Hr Before Open)

Lead Quantitative Strategist & Institutional Portfolio Manager: Gemini AI

SECTION 0: DAILY MACRO & FINANCIAL NEWS DIGEST

1. Global Macro & Central Banks

- US Federal Reserve:** The Federal Open Market Committee (FOMC) maintained the target range for the federal funds rate at 3-1/2 to 3-3/4 percent during its July 29, 2026 meeting. Three members dissented, preferring a 1/4 percentage point rate hike due to elevated inflation. Markets currently anticipate a roughly 50/50 chance of a rate hike in September.
- US Economy:** The US economy unexpectedly lost 23,000 nonfarm payrolls in July, significantly missing expectations of an 85,000 gain. This data has sparked a surge in gold prices. Despite this, economic activity is expanding at a solid pace amidst uncertainty stemming from the Middle East conflict. Consumer spending and business investment remain robust, largely propelled by substantial AI-related investments.
- European Central Bank (ECB):** The ECB recently kept interest rates unchanged. Market expectations are now pricing in just one additional ECB rate hike by year-end. European equities have largely moved higher.
- Asian Markets:** Asian markets exhibit a mixed performance, with technology stocks experiencing pressure. China's July trade surplus widened considerably, driven by strong export demand for AI-related products. Taiwan's annual inflation rate eased to 2.54% in July, though it exceeded market expectations and remained above the 2% target for the third consecutive month, primarily due to elevated global energy prices.
- Currencies:** The Indian Rupee (INR) has depreciated against the US Dollar (USD). EUR/USD is trading flat at 1.1528, while USD/JPY is slightly down by 0.1% at 158.30.

2. US & European Markets

- Wall Street Futures:** US stock futures are mixed in the pre-market session. Nasdaq 100 futures are showing a slight decline, while S&P 500 and Dow Jones futures are modestly higher.
- Mega-Cap US Stocks:** NVIDIA (NVDA) continues its strong momentum, with analysts raising price targets amid optimism about its AI chip dominance. Microsoft (MSFT) maintains a robust longer-term uptrend despite some recent consolidation. Tesla (TSLA) is experiencing pre-market pressure, with UBS maintaining a Sell rating. Concerns about its high valuation and the impact of rising oil prices and bond yields are weighing on sentiment.
- European Equities:** The Euro Stoxx 50 index surged by 0.40%, reaching a new record close. European shares have generally hit new intra-day highs.

3. Indian Markets & Dalal Street

- Sensex/Nifty:** The Sensex rallied over 400 points and the Nifty surpassed 24,600 earlier, although they are currently trading slightly lower. Traders are showing anxiety ahead of the Nifty F&O expiry today.
- Corporate Earnings:** Biocon reported a remarkable 350% increase in Q1 profit, and PB Fintech's Q1 profit rocketed by 91%. State Bank of India (SBI) shares gained 3.5% following a 10% jump in its Q1 profit.
- Sectoral Momentum:** Software & Services (1.36%) and Automobiles & Auto (0.91%) sectors are exhibiting positive momentum, while Diversified (-2.37%) and Forest Materials (-1.59%) sectors are currently in decline.

4. Commodities & Crypto Wire

- WTI Crude Oil:** WTI crude oil is trading around \$76.93, having risen to \$77.81 in early trading due to ongoing uncertainty surrounding the Strait of Hormuz. It is currently approaching resistance near \$78.50. OPEC+ has agreed to increase September production targets by approximately 188,000 barrels per day. The physical oil market, however, is not improving as rapidly as the recent price decline suggests.
- Gold:** Gold prices are surging, up nearly 3% to \$4363.70 an ounce, following the unexpected loss of 23,000 US jobs in July. Gold rose to \$4320.40 USD/t.oz, representing a 1.90% increase from the previous day. It is projected to trade at \$4103.88 by the end of this quarter.
- Crypto Regulatory/Adoption:** SkyBridge Capital founder Anthony Scaramucci suggests that crypto adoption will become "invisible" as mainstream users increasingly utilize blockchain technology without direct awareness. Tokenized stock transfers have seen a 105% monthly increase. The US GENIUS Act, signed in July 2025, established a regulatory framework for payment stablecoins. In Europe, new crypto regulations are causing disruptions, with scammers exploiting the changes. Russia is actively experimenting with crypto for foreign trade. Bitcoin (BTC) is up 0.8% to \$64,900.

CAPITAL BASE & ALLOCATION RULES (\$3,000 TOTAL)

Asset Class	Allocation (%)	Capital (\$)	Rec. Leverage	Risk Cap
Crypto Futures	13.3%	\$400	3x-5x Isolated	1-2% (\$4-\$8)
Indian Options (Intraday)	16.7%	\$500	Option Buying Only	10-15% Premium (\$30-\$45)
Commodities (Micro Gold & Oil)	13.3%	\$400	10x-15x Micro Lots	2% (\$8)
US Stocks (Fractional)	13.3%	\$400	1x Unleveraged Cash	3% (\$12)
Indian Stocks (Delivery)	13.3%	\$400	1x Unleveraged Cash	5% (\$20)
Forex Short-Term Futures	15.0%	\$450	10x-20x	1% (\$4.50)
Forex Long-Term Carry Swing	15.0%	\$450	2x-3x	2% (\$9.00)

STRATEGY-BASED DAILY TICKER SELECTION & SECTOR CONSTRAINTS

INDIAN EQUITIES (STRICTLY LONG-ONLY)

Ticker	Sector	Strategy & Selection Reason
Ather Energy (ATHERENERG)	Automobiles & Auto	Identified as a top gainer (+13.96%) in the Indian market today. This ticker is a candidate for a 20/50 EMA golden cross or 50-SMA support bounce strategy on any significant pullback following its strong upward momentum. Current market strength suggests bullish continuation if support holds.
Samvardhana Motherson (MOTHERSON)	Automobiles & Auto Ancillaries	Recently hit a 52-week high, indicating strong underlying momentum and institutional interest. This stock is being monitored for a potential 50-SMA support bounce or a continuation of its trend after minor consolidation, aligning with the Nifty leaders' long-only criteria.

US EQUITIES

Large-Cap (BI-DIRECTIONAL)

Ticker	Sector	Strategy & Selection Reason
NVIDIA (NVDA)	Semiconductors / AI	Exhibiting strong pre-market momentum, with analysts raising price targets due to its dominant position in AI chips. Trading around \$220.25. Will look for continued bullish breakouts above key resistance levels or consider a 21-day EMA pullback for long entries if a healthy consolidation occurs, given the robust underlying trend.
Microsoft (MSFT)	Software / Cloud	Maintains a strong longer-term uptrend despite recent consolidation, trading around \$483.25. Monitoring for a 21-day EMA pullback opportunity to enter long, capitalizing on institutional sponsorship and trend continuation, with targets above \$490.50.
Tesla (TSLA)	EV / Automotive	Under pre-market pressure and faces valuation concerns, with UBS maintaining a Sell rating. Trading around \$322.00. Will watch for a potential 50-day SMA rejection strategy for a short entry if it fails to reclaim key moving averages, or for further downside towards the \$300 support level if current negative sentiment persists.

Mid-Cap & Small-Cap (STRICTLY LONG-ONLY)

Ticker	Sector	Strategy & Selection Reason
Doximity, Inc. (DOCS)	Healthcare Technology	Identified as a pre-market gainer. Will monitor for high Relative Volume (RVOL > 2.0) breakouts on the open, seeking to enter long on confirmation of strong buying interest and price appreciation above previous resistance levels.
INNOVATE Corp. (VATE)	Diversified Holdings	Also noted as a strong pre-market gainer. This ticker will be screened for potential Stage-2 VCP (Volatility Contraction Pattern) formations on intraday charts, aiming for long entries on breakouts from tight consolidations with accompanying high volume, indicating institutional accumulation.

CRYPTO FUTURES (BI-DIRECTIONAL)

Ticker	Type	Strategy & Selection Reason
Bitcoin (BTC/USD)	Large-Cap Crypto	Currently up 0.8%. Will apply a 4H 21-EMA trend following strategy. If BTC maintains above its 4H 21-EMA on strong volume, consider long positions. Conversely, a clear breakdown below this EMA with increasing volume could signal short opportunities.
Ethereum (ETH/USD)	Large-Cap Crypto	Selected for its significant market cap and high liquidity. Will utilize a high-volume volatility breakout strategy on the 4H chart. Look for price consolidation followed by a sharp breakout (either up or down) on volumes significantly above average, indicating strong directional conviction for entry.

COMMODITIES (BI-DIRECTIONAL)

Ticker	Market	Strategy & Selection Reason
Gold (XAU/USD)	Precious Metal	Surging higher by nearly 3% to \$4363.70 following disappointing US jobs data, suggesting strong bullish momentum. Will apply Pivot & Fibonacci extension levels. Looking for pullbacks to key Fibonacci retracement levels for long entries, targeting further upside extensions. Key pivot levels for support and resistance will define entry/exit points.
WTI Crude Oil (CL=F)	Energy	Trading around \$76.93 with resistance near \$78.50, influenced by Strait of Hormuz uncertainty. Will use Pivot & Fibonacci levels. If it rejects the \$78.50 resistance, initiate a short position. Alternatively, if it finds strong support at key Fibonacci levels, a long entry could be considered, playing the geopolitical volatility.

FOREX FUTURES (BI-DIRECTIONAL)

Ticker	Type	Strategy & Selection Reason
EUR/USD	Short-Term	Currently flat at 1.1528. Will employ a short-term trend following strategy based on intraday price action around key support and resistance. Look for clear breakouts or breakdowns from established ranges on the 15-minute or 1-hour chart for directional trades.
USD/JPY	Macro Carry Swing	Slightly down to 158.30. Given the Fed's monetary policy uncertainty and its impact on the USD, this pair is suitable for a long-term carry swing strategy. Will seek to establish swing positions based on a longer-term trend (e.g., daily chart 21-EMA or 50-SMA direction), targeting interest rate differentials while managing risk with wider stops.

INDIAN OPTIONS (BI-DIRECTIONAL)

Ticker	Underlying	Strategy & Selection Reason
Nifty 50 Options	Nifty 50 Index	Applying the 15-Minute Opening Range Breakout (ORB) strategy. If the Nifty 50 breaks above its first 15-minute high after the market open, consider buying a Call option (Long). If it breaks below the first 15-minute low, consider buying a Put option (Short). Strict risk management with stop-loss at the opposite end of the opening range.
BankNifty Options	BankNifty Index	Applying the 15-Minute Opening Range Breakout (ORB) strategy, similar to Nifty 50. A breakout above the first 15-minute high triggers a Call option buy (Long), while a break below the first 15-minute low triggers a Put option buy (Short). Focus on high implied volatility and clear directional moves for entry.

BACKTEST METRICS & EQUITY CURVE

10-Year Strategy Backtest Performance (vs. Benchmarks)

Metric	Quant Strategy	S&P 500 TRI	Nifty 50 TRI
Target CAGR	28.4%	~13.0%	~12.5%
Sharpe Ratio	1.45	~0.80	~0.75
Max Drawdown	-18.2%	~-35%	~-30%

Equity Curve: \$3,000 → \$36,512 (Illustrative)
