Current Session Highlight:  London Session Pre-Open Briefing (1 Hr Before Open)

Session News Focus: Heavily focused on European macroeconomic releases, ECB/BOE news, Forex short-term futures (EUR/USD, GBP/USD), and Gold (XAU/USD) supply/demand zones.

SECTION 0: DAILY MACRO & FINANCIAL NEWS DIGEST

1. Global Macro & Central Banks

- The US Federal Reserve's highly anticipated interest rate decision concludes today, September 16, 2026. Markets are pricing in a 90-94% probability of a 25-basis-point hike, which would lift the federal funds target range to 3.75%-4.00%. The market's focus will be squarely on Fed Chair Kevin Warsh's forward guidance regarding future tightening.
- The European Central Bank (ECB) raised its three key interest rates by 25 basis points, effective today, September 16, 2026. The deposit facility rate is now 2.50%, the main refinancing rate 2.65%, and the marginal lending rate 2.90%. The ECB noted that inflation is expected to remain above target for an extended period, largely due to the ongoing Middle East conflict and elevated energy prices.
- Global 10-year bond yields have surged to multi-decade highs across the US, UK, Europe, and Japan. This rise is attributed to crude oil prices remaining above \$100 per barrel and heavy government debt issuance.
- The US Dollar has strengthened, tracking rising Treasury yields and bolstered by expectations of further Fed rate hikes. In contrast, the Euro (EUR/USD) is trading near its weekly lows, with \$1.1500 identified as a key support level. The British Pound (GBP/USD) is under negative pressure, nearing a five-week low, influenced by the impending Fed decision and upcoming UK CPI data. The USD/JPY has seen upward pressure, squeezing through the 155.00 level.

2. US & European Markets

- US stock futures are drifting slightly higher in pre-market trading, with Dow Jones, S&P 500, and Nasdaq 100 futures all showing marginal gains (around +0.1% to +0.2%). This reflects a cautious "wait-and-see" approach from investors following two straight days of losses on Wall Street, primarily driven by surging oil prices, rising bond yields, and concerns surrounding the artificial intelligence sector.
- European equity futures have risen, contributing to a tentative rebound in European stocks from their three-month lows. Investors in Europe are also awaiting the Fed's decision, which is expected to influence global risk appetite.
- In the semiconductor sector, Intel's CEO has flagged significant supply chain pressures for AI components, with memory prices soaring 5-7 times and CPU supply meeting only 50% of demand. However, TSMC's new fab in Dresden, Germany, has reached a significant construction milestone, indicating progress in European semiconductor manufacturing. China has also unveiled a new five-year plan prioritizing "full-chain breakthroughs" in semiconductors to build a resilient base for AI development.

3. Indian Markets & Dalal Street

- Indian equity benchmark indices, the Sensex and Nifty, opened higher today, rebounding from a sharp selloff in the previous session. The Nifty 50 was up 0.48% at 23,231.75, and the BSE Sensex 30 gained 0.48% to 74,358.02 in early trading. This positive sentiment was partly attributed to easing crude oil prices and value buying at lower levels.
- Sectorally, FMCG was a strong performer, leading gains with over a 1.71% rise, while the Defence sector saw declines. Mahindra & Mahindra, Reliance Industries, Hindustan Unilever, HCL Tech, and ITC were among the major winners in the Sensex firms.
- Foreign Institutional Investors (FIIs) offloaded equities worth ₹2,977.86 crore on Tuesday, September 15, 2026, indicating continued outflows.
- Applied Materials has committed to investing ₹3600 crore in Karnataka, India, over 10 years for research and development, manufacturing of essential equipment, and software technologies for semiconductor chip production.

4. Commodities & Crypto Wire

- Crude oil prices fell today due to an unexpected build in US crude inventories. However, both WTI and Brent crude remain elevated, trading around \$104-\$108 per barrel (WTI at \$104.88, Brent at \$108.13). Supply risks persist following Saudi Arabia's suspension of oil loadings at Yanbu port due to an attack, and broader geopolitical tensions in the Middle East continue to fuel price concerns.
- Gold prices have rebounded towards \$4,350 per ounce today, currently trading around \$4,326-\$4,366, after two sessions of losses. Investors are positioning ahead of the Federal Reserve's policy decision. The metal has been pressured by high energy prices, rising bond yields, and a stronger US Dollar. Technical analysis suggests downward momentum may still be present, with a potential retest of the \$4,200 support level.
- The cryptocurrency sector faced a significant setback as the US Senate rejected the Digital Asset Market Clear Act (CLARITY Act) with a 49-50 vote. This legislative failure represents a blow to the industry's hopes for a comprehensive regulatory framework in the US, leading to substantial declines in major crypto-related stocks like Coinbase. However, the US House Financial Services Committee is scheduled to mark up the Strategic Bitcoin Reserve bill today.
