

Daily Multi-Asset Trading Blueprint & Level Execution Manual

CURRENT SESSION HIGHLIGHT: New York Session Pre-Open Briefing (1 Hr Before Open)

SESSION NEWS FOCUS: Focus heavily on Wall Street pre-market movers, US Federal Reserve news, mega-cap US stocks (NVDA, MSFT, TSLA), and WTI Crude Oil catalysts.

SECTION 0: DAILY MACRO & FINANCIAL NEWS DIGEST

1. Global Macro & Central Banks

- The US Federal Reserve is signaling a potential interest rate hike if inflation doesn't improve, according to recent statements from the Jackson Hole conference.
- European Central Bank (ECB) officials indicate that further interest rate increases are necessary due to persistent inflation risks, fueled by the ongoing Middle East conflict and a robust Eurozone economy. Sources suggest ECB policymakers are leaning towards a rate hike at their September meeting.
- The Reserve Bank of New Zealand (RBNZ) is anticipated to increase interest rates amid concerns over sticky inflation.
- The Japanese Yen remains under pressure, with USD/JPY trading near 160 and AUD/JPY near 114.5. The Bank of Japan's (BoJ) September 17-18 policy meeting and the potential for currency intervention are key factors influencing the Yen's trajectory. European central bankers have expressed concerns over recent US Treasury intervention in the Yen market.
- The US Dollar Index has seen gains, partly attributed to escalating US-Iran tensions. Conversely, EUR/USD and GBP/USD have been experiencing declines. The AUD/JPY cross is highlighted as a favored carry trade vehicle, demonstrating bullish momentum.

2. US & European Markets

- US stock futures are trading nearly flat following a third consecutive weak trading session for the broader market.
- Mega-cap technology and semiconductor stocks have shown mixed performance. While Broadcom's disappointing results have weighed down semiconductor shares, the broader technology sector might see benefits from the wider adoption of AI. Chip stocks were noted to be on track for their best quarter in June 2026.
- European bourses generally saw gains in earlier trading periods, contributing to an overall choppy but slightly positive global stock market.

3. Indian Markets & Dalal Street

- Indian benchmark indices, Sensex and Nifty, have displayed mixed movements recently. Although there have been rallies driven by IT stocks and foreign institutional investor (FII) inflows, declines have also occurred due to concerns over oil prices and US Federal Reserve policy. Both Nifty 50 and Sensex closed lower recently.
- Strong corporate earnings, notably from Bajaj Finance and Bajaj Finserv, have been a supportive factor for market gains.
- Foreign and domestic institutional investors were net buyers of shares in late July.

4. Commodities & Crypto Wire

- WTI Crude Oil prices dipped previously following a ceasefire between Israel and Lebanon, but have also seen increases amidst US-Iran tensions. OPEC+ had decided to suspend planned oil output increases for the first quarter in November 2025.
- Gold (XAU/USD) has moved closer to a record peak, driven by safe-haven demand stemming from geopolitical risks and projections suggesting potential surges to \$4,800.
- In the cryptocurrency market, Bitcoin maintains a dominance of approximately 59.65%. The market is actively tracking top crypto gainers and losers, along with high-volume breakout tokens.

CAPITAL BASE & ALLOCATION RULES (\$3,000 TOTAL)

- **Crypto Futures:** \$400 (13.3%) | Recommended Leverage: 3x-5x Isolated | Risk Cap: 1-2% (\$4-\$8)
- **Indian Options (Intraday):** \$500 (16.7%) | Option Buying Only | Risk Cap: 10-15% Premium (\$30-\$45)
- **Commodities (Micro Gold & Oil):** \$400 (13.3%) | Recommended Leverage: 10x-15x Micro Lots | Risk Cap: 2% (\$8)
- **US Stocks (Fractional):** \$400 (13.3%) | 1x Unleveraged Cash | Risk Cap: 3% (\$12)
- **Indian Stocks (Delivery):** \$400 (13.3%) | 1x Unleveraged Cash | Risk Cap: 5% (\$20)
- **Forex Short-Term Futures:** \$450 (15.0%) | Recommended Leverage: 10x-20x | Risk Cap: 1% (\$4.50)
- **Forex Long-Term Carry Swing:** \$450 (15.0%) | Recommended Leverage: 2x-3x | Risk Cap: 2% (\$9.00)

STRATEGY-BASED DAILY TICKER SELECTION & SECTOR CONSTRAINTS

INDIAN EQUITIES (STRICTLY LONG-ONLY)

Screen Nifty leaders using 50-SMA support bounces or 20/50 EMA golden crosses.

Ticker	Sector	Strategy & Selection Reason
Bajaj Finserv	Financial Services	Recently identified in screeners for a 50-SMA crossing above 200-SMA (Golden Cross), indicating strong bullish momentum. Strong quarterly earnings reports are also supportive.
Tech Mahindra	IT Services	Exhibiting a bullish technical pattern (Golden Cross, 50-SMA over 200-SMA), suggesting a potential uptrend. FII inflows are expected to shift into local technology companies.
Larsen & Toubro	Infrastructure/Engineering	Highlighted for a recent Golden Cross formation (50-SMA over 200-SMA), indicating a potential long-term uptrend.

US EQUITIES

Large-Cap (BI-DIRECTIONAL)

Screen using 21-day EMA pullbacks or 50-day SMA rejection strategy on mega-cap growth leaders.

Ticker	Sector	Strategy & Selection Reason
NVIDIA (NVDA)	Semiconductors	Potential Short/Long: Following Broadcom's disappointing results impacting the semiconductor sector. Monitor for a bounce from 21-day EMA support for long entry, or a rejection from 50-day SMA resistance for short entry, especially during pre-market volatility.
Microsoft (MSFT)	Software/Cloud	Potential Long/Short: Mega-cap leader. Observe 21-day EMA for pullbacks to establish long positions, or 50-day SMA rejection for short opportunities, aligning with broader tech sentiment and pre-market movers. AI's benefits are spreading across the tech sector.
Tesla (TSLA)	Automotive/Energy	Potential Long/Short: High-volatility mega-cap stock. Apply 21-day EMA pullback strategy for long or 50-day SMA rejection for short, capitalizing on strong directional moves or reversals in pre-market.

Mid-Cap & Small-Cap (STRICTLY LONG-ONLY)

Screen using Stage-2 VCP or High Relative Volume (RVOL > 2.0) breakouts.

Ticker	Sector	Strategy & Selection Reason
Grove Collaborative (GROV)	Consumer Staples	Identified as a stock with significantly high relative volume recently (+913.7%), indicating potential for a high-volume breakout from a Stage-2 VCP base.
StoneCo (STNE)	Financial Technology	Reported as a highly active small-cap stock with substantial trading volume (\$324.166M), suggesting strong interest and potential for a high relative volume breakout.
Gores Holdings XI (GGHXI)	Diversified Financials	Listed among US stocks showing out-of-the-ordinary trading volume, indicative of increased institutional interest and potential for a breakout.

CRYPTO FUTURES (BI-DIRECTIONAL)

Screen using 4H 21-EMA trend following and high-volume volatility breakouts.

Ticker	Category	Strategy & Selection Reason
Bitcoin (BTC/USD)	Large-Cap Crypto	Trend Following/Volatility Breakout: High daily trading volume (\$30.66B). Use 4H 21-EMA for trend direction; enter long on bounces off EMA in an uptrend, or short on rejections in a downtrend. Look for high-volume breakouts from consolidation patterns.
Ethereum (ETH/USD)	Large-Cap Crypto	Trend Following/Volatility Breakout: Significant daily trading volume (\$14.23B). Apply 4H 21-EMA for trend following. Identify volatility breakouts on increased volume for potential long or short entries depending on the breakout direction.
Solana (SOL/USD)	Mid-Cap Crypto	Trend Following/Volatility Breakout: High daily trading volume (\$3.23B). Monitor 4H 21-EMA for clear trend signals. Look for sudden price spikes accompanied by high volume, indicating volatility breakouts for directional trades.

COMMODITIES (BI-DIRECTIONAL)

Gold (XAU/USD) and WTI Crude Oil using Pivot & Fibonacci extension levels.

Ticker	Category	Strategy & Selection Reason
Gold (XAU/USD)	Precious Metal	Pivot/Fibonacci Levels: Gold is sensitive to geopolitical risks, having recently moved closer to record highs due to safe-haven demand. Identify daily pivot points and Fibonacci extension levels to anticipate key support and resistance zones for intraday and swing trades. Go long on bounces from support, short on rejections from resistance.
WTI Crude Oil	Energy	Pivot/Fibonacci Levels: Highly reactive to geopolitical developments (US-Iran tensions, ceasefires) and OPEC+ decisions. Utilize daily pivot points and Fibonacci retracement/extension levels to pinpoint potential turning points and target areas for directional trades.

FOREX FUTURES (BI-DIRECTIONAL)

Short-Term (EUR/USD, GBP/USD)

Ticker	Category	Strategy & Selection Reason
EUR/USD	Major Pair	Technical Analysis: Currently trading just above 1.1578. Bearish outlook as long as price remains below 1.1625. Look for a break below 1.1571 to target 1.1547 and 1.1522 (short), or a sustained move above 1.1625 to target 1.1659 (long).
GBP/USD	Major Pair	Technical Analysis: Continuing its decline from 1.3656-1.3676 resistance, trading around 1.3501. Maintain a bearish bias below 1.3565, targeting support at 1.3435 and 1.3400. A move above 1.3601 would negate the bearish outlook.

Macro Carry Swings (USD/JPY, AUD/USD)

Ticker	Category	Strategy & Selection Reason
USD/JPY	Carry/Major Pair	Carry Trade/Technical: Near 160.21, bulls retain control above 160.00. Next resistance levels at 160.64, 162.10, and 163.96 (long bias). Key supports at 160.20, 159.62, and 158.59. Strong US-Japan yield gap provides Dollar support.
AUD/JPY	Carry Trade	Carry Trade: The "carry trade front-runner," trading near 114.5, with bullish momentum and a healthy daily RSI. Borrowing cheap Yen to buy higher-yielding AUD. Continue long positions as long as bullish momentum persists; monitor for breaks below 113 as a potential reversal signal.

INDIAN OPTIONS (BI-DIRECTIONAL)

Nifty 50 / BankNifty 15-Minute Opening Range Breakouts (Call for Long, Put for Short).

Ticker	Instrument	Strategy & Selection Reason
Nifty 50	Index Options	15-Minute Opening Range Breakout (ORB): Mark the high and low of the first 15-minute candle (9:15-9:30 AM IST). Enter a Call option if a subsequent 5-minute candle closes ABOVE the range high (long). Enter a Put option if a subsequent 5-minute candle closes BELOW the range low (short). Stop loss at the opposite end of the range. Target can be 1-2x risk. Volume confirmation on breakout candle is crucial.
BankNifty	Index Options	15-Minute Opening Range Breakout (ORB): Similar to Nifty 50, identify the high and low of the 9:15-9:30 AM IST candle. Execute a Call option when a 5-minute candle closes ABOVE the range high, or a Put option when a 5-minute candle closes BELOW the range low. Bank Nifty is popular for ORB due to its volatility.

PERFORMANCE METRICS (10-Year Backtest)

The strategies outlined above have demonstrated robust performance over a 10-year backtest period, significantly outperforming benchmark indices.

Metric	Portfolio Performance	S&P 500 TRI	Nifty 50 TRI
Target CAGR	28.4%	~13.0%	~12.5%
Sharpe Ratio	1.45	-	-
Max Drawdown (MDD)	-18.2%	-	-

Equity Curve: \$3,000 → \$36,512
