Session Highlight: New York Session Pre-Open Briefing (1 Hr Before Open)

Session News Focus: Focus heavily on Wall Street pre-market movers, US Federal Reserve news, mega-cap US stocks (NVDA, MSFT, TSLA), and WTI Crude Oil catalysts.

SECTION 0: DAILY MACRO & FINANCIAL NEWS DIGEST

1. Global Macro & Central Banks

- Three dissenting US Federal Reserve policymakers advocated for immediate rate hikes to combat persistent inflation, which has remained above the central bank's 2% target for over five years. Cleveland Fed President Beth Hammack, Minneapolis Fed President Neel Kashkari, and Dallas Fed President Lorie Logan all issued statements supporting a quarter-percentage-point increase in rates. This follows the Fed's decision earlier this week to keep interest rates steady at 3.50-3.75 percent for the fifth consecutive meeting.
- Euro-area flash inflation accelerated marginally to 2.9% in July, partly due to higher energy prices, leading to expectations that the ECB will raise rates again in September.
- India's financial markets had anticipated the inclusion of Indian sovereign bonds on the Global Aggregate index following a mid-July review, but Bloomberg has delayed this entry.
- The Indian rupee appreciated 9 paise to close at 95.41 against the US dollar and posted a 1% weekly gain, its strongest performance since March, supported by sustained intervention from the Reserve Bank of India (RBI). India's forex kitty also grew by \$6 billion due to an increase in dollar count.
- Deposit rates in India rose in June, particularly at private-sector lenders, as competition for funds intensified and loan growth accelerated, pushing banks to offer higher returns.

2. US & European Markets

- Microsoft (MSFT) surged over +8% in pre-market trading after reporting better-than-expected fiscal fourth-quarter results, with revenue in its cloud-computing unit growing at the fastest pace in four years. The company's Azure revenue increased by 43% during the quarter, surpassing guidance.
- NVIDIA (NVDA) stock saw a 2.93% increase on July 31st, 2026, closing at \$200.75. An AI-generated forecast suggests NVDA could climb to \$228.40 by August 1, 2026, implying a roughly 7.7% upside, driven by strong demand for AI infrastructure and Blackwell AI systems. However, some institutional investors, like Boston Common Asset Management LLC, have reduced their positions in NVDA.
- Tesla (TSLA) slipped 2% in premarket trading on July 28th, extending a four-day losing streak, but Morningstar views the post-earnings pullback as a buying opportunity. TSLA is currently trading up in pre-market on August 1st, at \$309.55, up \$0.70 (0.23%) from its previous close. Concerns exist around Tesla's rising capital expenditures, with 2026 capex expected to exceed \$25 billion.
- The Chicago Business Barometer advanced to 57.6 in July, remaining in expansionary territory for a third consecutive month, driven by stronger new orders.
- Stocks climbed before the open, with broader support coming from a mild rebound in most chip and AI infrastructure stocks in pre-market trading, following Samsung Electronics' report of a 250-fold jump in chip profits.

3. Indian Markets & Dalal Street

- Nifty has closed above the 200 EMA on the daily timeframe, signaling a positive long-term trend, with immediate support at 24,200-24,250 and resistance at 24,500-24,550. India VIX declined by 3.29% to 11.75, indicating easing volatility.
- Bank Nifty continues to consolidate near higher levels, indicating resilience, but struggles to cross the 20 EMA, suggesting selling pressure at elevated levels. Key resistance for Bank Nifty is in the 57,400-58,000 zone, with support between 57,000 and 56,500.
- FII inflows have been strong, contributing to the resilience of Indian equities despite global risks.

4. Commodities & Crypto Wire

- WTI Crude Oil prices rose 1% on Friday, July 31, closing at \$84.67 a barrel, capping a more than 20% gain in July, its strongest monthly increase since March. This surge was driven by escalating geopolitical tensions and concerns over global oil supplies, particularly Iranian reports of tankers being forced to turn back in the Strait of Hormuz. Crude oil is expected to trade at \$93.39 USD/BBL by the end of this quarter.
- Gold (XAU/USD) is currently trading at \$4044.47 as of August 1, 2026. On the 4-hour chart, gold has been consolidating within a well-defined range, with short-term momentum improving as price trades above both the 20-period and 50-period Simple Moving Averages. Analysts maintain a bearish outlook for gold, expecting it to decline to the \$2,875-\$2,994 range by the end of the year amid ongoing geopolitical tensions and potential Fed rate hikes. The estimated pivot point for XAU/USD is 4,205.80.
- No specific major crypto regulatory or adoption headlines for August 1, 2026, were prominently found in the live search, but the broader crypto market continues to be influenced by global macroeconomic conditions.
