Session News Focus: Wall Street pre-market movers, US Federal Reserve news, mega-cap US stocks (NVDA, MSFT, TSLA), and WTI Crude Oil catalysts.

📰 SECTION 0: DAILY MACRO & FINANCIAL NEWS DIGEST

1. Global Macro & Central Banks

- **US Inflation Data Awaited:** Markets are keenly awaiting the US CPI data for September, with expectations of headline inflation accelerating to 0.6% month-on-month (0.4% previously) and 3.6% year-on-year (3.4% previously). Core inflation, excluding food and fuel, is expected to ease to 0.2% (0.3% previously). Higher gasoline prices may contribute to the headline figure.
- **Federal Reserve Outlook:** New York Federal Reserve President John Williams has signaled only one more rate hike this year, downplaying the need for further tightening in 2027. Traders currently see a 77% chance of the Fed keeping rates unchanged at its October 27-28 meeting.
- **RBA Hawkish Stance:** Minutes from the Reserve Bank of Australia's September meeting indicate officials are prepared for more rate hikes if necessary, contributing to a stronger Australian Dollar.
- **Bank of Japan (BoJ) Leaning Against Hikes:** Reports suggest BoJ officials are leaning against a rare back-to-back interest rate hike, which is undermining the Japanese Yen and providing a tailwind for USD/JPY.
- **Singapore Central Bank Policy Pause:** The Monetary Authority of Singapore unexpectedly held off on further tightening, citing easing growth and inflation concerns, despite most economists expecting tightening.
- **Chinese Social Financing Slows:** Cumulative growth in aggregate social financing in China for the first three quarters of 2026 was 27.46 trillion yuan, a decrease of 2.63 trillion yuan year-on-year.

2. US & European Markets

- **Semiconductor Demand Outstrips Supply:** ASML, a crucial supplier of chipmaking tools, announced that planned supply for 2027 and 2028 will not fully meet customer demand, driven almost entirely by the artificial intelligence (AI) buildout. This highlights the intense demand for AI infrastructure. The semiconductor industry reached a trillion-dollar milestone in annual revenue in 2026, much earlier than previously forecasted, primarily driven by AI infrastructure. Global 300mm fab equipment spending is forecast to reach $227 billion by 2029, with investment jumping 31% year-on-year to $149 billion in 2026.
- **US Stocks and Futures:** US stock futures are trading lower ahead of the New York session, with the Russell 2000 breaking its 200-day average as CPI risk looms.
- **Mega-Cap Tech Movers (NVDA, MSFT, TSLA):** NVIDIA (NVDA) shares are showing pre-market weakness, slipping about 0.8–1.3% and marking a fourth straight decline. This comes after NVIDIA revealed open-standard designs for its Vera Rubin platform and listed partners. Despite this, analysts remain bullish on NVDA with an average price target of $321.89, citing strong quarterly results and growth prospects from new AI infrastructure, balanced by risks like declining China market share and increased competition.

3. Indian Markets & Dalal Street

- **Indian Market Opening:** Indian equity benchmark indices, Sensex and Nifty, opened on a muted or flat note on Wednesday. The Sensex slipped nearly 100 points, and the Nifty traded marginally lower, below 22,700.
- **Tuesday's Rebound and Cautious Sentiment:** Indian markets had rallied strongly on Tuesday, with Sensex surging over 1,100 points and Nifty closing above 22,720, driven by gains in IT, financial, and FMCG stocks, a recovering rupee, and remarks on long-term capital gains tax. However, investors are now turning cautious ahead of US inflation data.
- **Sectoral Performance:** On Wednesday, pharma and healthcare shares weighed heavily, while Nifty IT stocks showed strength. Infosys and TCS were among the major gainers in early trade.
- **FII/DII Flows:** Foreign Institutional Investors (FIIs) remained sellers on Tuesday, offloading equities worth Rs 1,305.13 crore, while Domestic Institutional Investors (DIIs) were buyers, buying equities worth Rs 2,439.24 crore.
- **Key Earnings:** Investors are watching quarterly earnings from companies like BHEL, Groww, and Canara Bank today.

4. Commodities & Crypto Wire

- **WTI Crude Oil:** Crude oil prices remained higher, trading around $107 per barrel, amid supply concerns linked to escalating Houthi attacks on Saudi Arabia and expectations of higher Russian diesel exports. Oil prices climbed in Asian trading following more attacks by Yemen's Iran-allied Houthis on Saudi Arabia.
- **Gold:** Gold held steady ahead of the crucial US CPI data.
- **Cryptocurrency:** Bitcoin analysis suggests caution keeps BTC below $85K.
