Current Session Highlight: 🇺🇸 New York Session Pre-Open Briefing (1 Hr Before Open)

Session News Focus: Wall Street pre-market movers, US Federal Reserve news, mega-cap US stocks (NVDA, MSFT, TSLA), and WTI Crude Oil catalysts.

📰 SECTION 0: DAILY MACRO & FINANCIAL NEWS DIGEST

1. Global Macro & Central Banks

- The Federal Reserve is widely expected to hold interest rates steady at 3.75%-4.00% during its October 27-28 meeting, with economists forecasting a rate increase in December amid steady inflation.
- US government bond yields have surged in recent months, with the 10-year Treasury rising to around 5.10%, impacting global financial conditions and exposing structural fragilities in other economies.
- The Bank of Korea maintained its benchmark interest rate at 3.00% on Thursday, pausing after consecutive hikes in July and August, influenced by strong semiconductor-driven growth and inflation.
- The Japanese Yen has surged to a near three-week high against the US dollar, benefiting from a retreat in dollar bets ahead of upcoming central bank meetings where "hawkish holds" are expected.
- The Euro has seen some support after a month of decline, despite fiscal concerns in France and rising borrowing costs in Europe.

2. US & European Markets

- US stock futures are lower on Thursday as investors digest mixed financial results from Meta and Tesla, and concerns linger over the sustainability of AI valuations.
- NVIDIA (NVDA) has been a strong pre-market mover, with a recent surge in its stock price, but concerns over the AI-driven earnings narrative persist.
- Tesla (TSLA) shares are down in pre-market trading after the company reported earnings and cut its spending forecast, despite recently unveiling a new Roadster model.
- Microsoft (MSFT) is expanding production with supply-chain partners to accelerate AI infrastructure development.
- European markets, including the DAX, are falling due to rising oil prices and renewed concerns about elevated AI valuations after mixed tech earnings.

3. Indian Markets & Dalal Street

- Indian markets remained under significant pressure on Thursday, with the Sensex plunging over 400 points and the Nifty50 closing below the 22,700 mark for the third consecutive session.
- Key factors contributing to the decline include rising crude oil prices, renewed geopolitical tensions in West Asia, and a weakening rupee.
- Foreign Institutional Investors (FIIs) have been net sellers in Indian equities for 10 out of 13 sessions in October.
- Heavyweight stocks like Reliance Industries and HDFC Bank contributed to the market's decline, while Bajaj Finance and Cipla were among the top Nifty gainers.

4. Commodities & Crypto Wire

- WTI Crude Oil is attempting to settle below the $96.50 - $97.00 support level, while Brent crude has surged above $110 per barrel following Houthi attacks on Saudi Arabia's energy infrastructure.
- Rising oil prices are fueling inflation concerns globally and could put further pressure on equities.
- Gold prices are holding steady amidst safe-haven demand due to geopolitical tensions, though higher oil prices are contributing to rate hike concerns.
- The Commodity Futures Trading Commission (CFTC) has issued a notice stating that cash Bitcoin purchases could fall under its futures trading framework if a financing offer applies.
- Bitcoin prices have risen above $80,000, leading to unrealized gains for public companies holding Bitcoin, although broader US demand signals remain weak.
