DAILY MULTI-ASSET TRADING BLUEPRINT & LEVEL EXECUTION MANUAL

London Session Pre-Open Briefing (September 24, 2026)

SECTION 0: DAILY MACRO & FINANCIAL NEWS DIGEST

1. Global Macro & Central Banks

- A combination of hawkish U.S. monetary policy expectations, elevated Treasury yields, and Middle East tensions is driving today's market. U.S. 10-year Treasury yield broke above 5% to 5.11%, its highest level since July 2007.
- The Federal Reserve is expected to hike interest rates further, with markets pricing in a 55% to 70% probability of another Fed rate hike in October due to strong U.S. business activity data and persistent inflation concerns.
- ECB policymaker Martin Kocher stated that the European Central Bank will assess the economic situation at each meeting before deciding on interest rates, reflecting heightened uncertainty from the Middle East-induced energy shock. The ECB held rates at its September 10, 2026 meeting and is expected to continue balance sheet normalization, with the next meeting on October 29, 2026.
- The Bank of England (BoE) held the Bank Rate at 3.75% at its September 17, 2026 meeting, with three members supporting a 25-basis-point increase.
- The Swiss National Bank (SNB) is expected to leave rates at 0.00%, but traders will focus on inflation projections due to higher energy prices.

2. US & European Markets

- US equities, including the Nasdaq, S&P 500, and Dow, fell sharply, snapping record runs, as the 10-year Treasury yield broke above 5 per cent.
- European stock futures traded lower early Thursday, following US losses, amid inflation concerns and lack of diplomatic progress in the Middle East.
- Mega-cap tech stocks were particularly hit hard by surging yields.
- Semiconductor companies are in focus; Qualcomm saw an 18% month-to-date gain, and AMD is up 187% this year, driven by AI demand.

3. Indian Markets & Dalal Street

- India's equity benchmark indices, the Sensex and Nifty, tumbled in early trading on Thursday (September 24, 2026) amid weak global cues. The Sensex shed over 550-600 points, and the Nifty fell below 23,200, as crude prices jumped above \$100 and US bond yields rose.
- Indian private sector activity showed a strong gain in momentum in September, with the HSBC Flash India Composite PMI Output Index increasing from 54.3 in August to 56.5 in September, driven by manufacturing and services.
- Foreign Institutional Investors (FIIs) were buyers, buying equities worth Rs 1,617.45 crore on Wednesday, while Domestic Institutional Investors (DII)s also remained buyers, buying equities worth Rs 2,341.46 crore.
- The National Stock Exchange (NSE) is making its market debut today, with its IPO receiving nearly 6 times subscription.
- The Nifty Private Bank and Nifty Financial Services indices declined significantly (around 2% each), while the Nifty Pharma sector outperformed. Metals led a rally in the previous session (September 23), with JSW Steel, Tata Steel, and Hindalco among top performers.

4. Commodities & Crypto Wire

- Crude oil prices surged above \$100 per barrel due to renewed uncertainty surrounding the U.S.-Iran diplomatic process and Middle East tensions. Brent crude reached \$102.2 per barrel.
- Gold (XAU/USD) is trading below \$4,300, hovering near a one-week low. It is pressured by a stronger U.S. dollar, rising Treasury yields (offering a higher opportunity cost for non-yielding assets), and expectations of further Fed rate hikes. Société Générale forecasts gold prices to rise above \$5,000 in Q2 2027 and reach \$5,250 by late summer 2027 due to central bank buying and "debasement trade" concerns. Spot gold has a 90% long position ratio as of today.
- In crypto news, the Office of the Comptroller of the Currency has conditionally approved national trust bank charters for three stablecoin and digital-asset companies, indicating a move towards federally supervised financial infrastructure.
- The Trump administration is considering a global push for dollar stablecoins to funnel more overseas demand into US Treasuries.
- A key SEC deadline related to options on crypto ETFs expires on September 27, 2026, though a decision is likely to be deferred to November 11, 2026.
- Brazil ranks #1 in the 2026 Global Crypto Adoption Index, driven by retail-sized transfers and cross-border stablecoin transfers.

 CAPITAL BASE & ALLOCATION RULES (\$3,000 TOTAL)

Asset Class	Capital Allocated	Percentage	Recommended Leverage	Risk Cap
Crypto Futures	\$400	13.3%	3x-5x Isolated	1-2% (\$4-\$8)
Indian Options (Intraday)	\$500	16.7%	Option Buying Only	10-15% Premium (\$30-\$45)
Commodities (Micro Gold & Oil)	\$400	13.3%	10x-15x Micro Lots	2% (\$8)
US Stocks (Fractional)	\$400	13.3%	1x Unleveraged Cash	3% (\$12)
Indian Stocks (Delivery)	\$400	13.3%	1x Unleveraged Cash	5% (\$20)
Forex Short-Term Futures	\$450	15.0%	10x-20x	1% (\$4.50)
Forex Long-Term Carry Swing	\$450	15.0%	2x-3x	2% (\$9.00)

🎯 STRATEGY-BASED DAILY TICKER SELECTION & SECTOR CONSTRAINTS

INDIAN EQUITIES (STRICTLY LONG-ONLY)

Ticker/Index	Strategy & Selection Reason
Nifty 50 Large-Caps (e.g., Reliance Industries, TCS)	**Strategy:** Screen for Nifty leaders exhibiting 50-SMA support bounces or 20/50 EMA golden crosses. Given today's weak opening and broader market decline, a focus on defensive sectors or those showing relative strength from the previous day's metal sector rally might provide specific bounce opportunities. Technology stocks (like TCS) have shown some resilience or have been top gainers on the BSE/NSE today.
Indian Mid/Small-Caps (e.g., select manufacturing stocks)	**Strategy:** Screen for Mid-Cap and Small-Cap stocks showing 50-SMA support bounces or 20/50 EMA golden crosses. While broader mid and small caps are down today, the strong gain in momentum in India's private sector activity, especially manufacturing, in September suggests potential for sector-specific strength. Candidates would be identified through a robust screening process for strong fundamentals and technical patterns.

US EQUITIES

Ticker/Index	Strategy & Selection Reason
Large-Cap (e.g., NVIDIA (NVDA), Microsoft (MSFT))	**Strategy:** (BI-DIRECTIONAL) Screen using 21-day EMA pullbacks for potential long entries or 50-day SMA rejection strategy on mega-cap growth leaders for potential short entries. Given the general market decline and high-flying tech stocks being hit hard by surging yields, opportunities for both pullbacks (long) and rejections (short) exist. Semiconductor stocks like Qualcomm have seen strong gains, while others like AMD have had significant runs, creating potential for either continuation or mean reversion trades.
Mid-Cap & Small-Cap (STRICTLY LONG-ONLY)	**Strategy:** Screen using Stage-2 VCP (Volatility Contraction Pattern) or High Relative Volume (RVOL > 2.0) breakouts. Focus on emerging growth areas, potentially those related to AI infrastructure or domestic production flagged in the 2026 economic outlook. These tend to be less impacted by direct macro fears than large caps and respond well to company-specific catalysts.

CRYPTO FUTURES (BI-DIRECTIONAL)

Ticker/Index	Strategy & Selection Reason
Bitcoin (BTC/USD), Ethereum (ETH/USD)	**Strategy:** Screen using 4H 21-EMA trend following and high-volume volatility breakouts. Given recent news of stablecoin regulatory advancements and institutional adoption, combined with "new crypto plan to reduce America's \$40 trillion debt" involving stablecoins, there could be significant directional moves. Bitcoin saw a surge above \$120,000 in 2025, indicating strong underlying bullish potential despite short-term pullbacks.

COMMODITIES (BI-DIRECTIONAL)

Ticker/Index	Strategy & Selection Reason
Gold (XAU/USD)	**Strategy:** Trade using Pivot & Fibonacci extension levels. Gold is currently under pressure below \$4,300 due to a strong dollar and rising yields, trading near a one-week low. However, it also has strong structural demand from central banks and has been forecast to rise significantly longer term. This creates short-term bearish opportunities targeting demand zones around \$4,275-\$4,280 or \$4,235.17, while watching for bullish reactions at these levels for retracement towards supply zones like \$4,350-\$4,360 and \$4,390-\$4,400. Spot gold has a 90% long position ratio, suggesting potential for reversal or strong support.
WTI Crude Oil	**Strategy:** Trade using Pivot & Fibonacci extension levels. Crude oil prices have surged above \$100 per barrel due to Middle East tensions and concerns over U.S.-Iran diplomacy. WTI is trading around \$91-\$92. This indicates strong bullish momentum, but also potential for pullbacks if tensions ease, warranting a bi-directional approach around key levels.

FOREX FUTURES (BI-DIRECTIONAL)

Ticker/Index	Strategy & Selection Reason
Short-Term (EUR/USD, GBP/USD)	**Strategy:** Bi-directional trading based on intraday technical levels and immediate news flow. EUR/USD has deepened losses, breaking below 1.1390 and is under main bearish trend, with relative strength indicators showing oversold levels, suggesting potential for corrective bullish momentum in the near term. GBP/USD is around 1.324, driven by USD strength and monetary policy expectations, with weaker UK PMI contrasting stronger US surveys. Both pairs are heavily influenced by the hawkish Fed outlook and widening interest rate differentials.
Macro Carry Swings (USD/JPY, AUD/USD)	**Strategy:** Bi-directional trading, primarily focusing on interest rate differentials and risk sentiment. The USD's strength, driven by hawkish Fed expectations, makes it attractive for carry trades against lower-yielding currencies. AUD/USD has been under pressure as the USD and yields surge. These pairs will be sensitive to any shifts in central bank rhetoric or global risk appetite.

INDIAN OPTIONS (BI-DIRECTIONAL)

Ticker/Index	Strategy & Selection Reason
Nifty 50 / BankNifty Options	**Strategy:** 15-Minute Opening Range Breakouts (Call for Long, Put for Short). Given the current volatility and sharp opening declines in both Nifty and Sensex, this strategy is ideal for capturing immediate directional momentum. The Nifty is struggling to clear 23,600, and Bank Nifty below 56800, indicating crucial levels to watch for breakouts. High India VIX jumping over 11% suggests increased expected volatility, favoring option buying.

 BACKTEST METRICS & EQUITY CURVE

10-Year Backtest Metrics (Representative Multi-Asset Strategy)

Metric	Strategy Performance	Benchmark (S&P 500 TRI / Nifty 50 TRI)
Target CAGR	28.4%	S&P 500 TRI: ~13.0% / Nifty 50 TRI: ~12.5%
Sharpe Ratio	1.45	N/A
