- The Federal Open Market Committee (FOMC) decided to maintain the target range for the federal funds rate at 3-1/2 to 3-3/4 percent, with a 9-3 vote, in their meeting on July 29, 2026. This decision aims to support the Federal Reserve's dual mandate, despite elevated inflation remaining relative to the 2 percent goal.
- Economic activity continues to expand at a solid pace, supported by strong productivity growth and capital investment, while job gains have kept pace with the workforce.
- Three voting members dissented, preferring a 1/4 percentage point rate hike, highlighting ongoing debates within the Fed regarding inflationary pressures.
- The US dollar strengthened against the Japanese yen, driven by safe-haven positioning ahead of upcoming US jobs data and ongoing geopolitical developments.
- European Central Bank (ECB) last changed rates on June 11, 2026, with their next meeting scheduled for September 10, 2026.

2. US & European Markets

- US stock futures are showing mixed to negative signals in pre-market trading, with the S&P 500 and Dow Jones futures slightly down, influenced by Middle East tensions and rising oil prices.
- Mega-cap tech stocks experienced mixed trading in early sessions, with some profit-taking noted after strong earnings reports from Microsoft, Amazon, and Meta.
- Microsoft's strong earnings and capital expenditures previously sent its shares to historic levels, boosting other tech stocks due to massive chip demand driven by AI investments.
- The S&P 500 recently reached new record highs after a period of consolidation, indicating broad-based market participation and investor confidence.
- European shares extended their run of record highs, supported by strong corporate earnings and optimism surrounding a potential US-Iran peace deal regarding the Strait of Hormuz.
- Key European companies like Deutsche Telekom saw significant gains after strong earnings, while Siemens and Rheinmetall faced declines due to missed expectations or lowered outlooks.

3. Indian Markets & Dalal Street

- Indian benchmark indices, Sensex and Nifty 50, are expected to open lower today, signaled by Gift Nifty, due to rising crude oil prices and escalating Middle East tensions.
- The Gift Nifty was trading at a discount, indicating a potential gap-down start for the Nifty50.
- In the previous session, domestic equity benchmarks closed positively, with Sensex advancing and Nifty 50 seeing slight gains, despite a range-bound trading session.
- Several Indian companies, including LIC, Trent, Britannia, and Muthoot Microfin, recently reported strong Q1 earnings with significant profit jumps, indicating robust corporate performance in various sectors.
- The Indian Rupee slightly weakened against the US dollar amid importer demand, even as oil prices showed signs of easing.
