CURRENT SESSION HIGHLIGHT: London Session Pre-Open Briefing (1 Hr Before Open)

SESSION NEWS FOCUS: Heavy emphasis on European macroeconomic releases, ECB/BOE news, Forex short-term futures (EUR/USD, GBP/USD), and Gold (XAU/USD) supply/demand zones.

SECTION 0: DAILY MACRO & FINANCIAL NEWS DIGEST

1. Global Macro & Central Banks

- **US Federal Reserve:** Federal Reserve Governor Christopher Waller's recent dovish comments have significantly tempered expectations for a September interest rate hike, with the probability falling to around 50% from over 63% previously. This has provided relief to global bond yields and supported equity markets. However, the upcoming US Nonfarm Payrolls (NFP) report on September 4 and inflation data later in the month remain crucial for the Fed's policy stance.
- **European Central Bank (ECB):** The ECB is widely expected to deliver another 25-basis-point rate hike at its September 10 policy meeting, with a 99.2% probability priced in by markets. Some major banks, including J.P. Morgan and BNP Paribas, have revised their forecasts to include a potential December rate hike as well, citing persistent inflation risks, elevated energy prices, and resilient economic growth. Eurozone Retail Sales data is also due, with expectations of a 0.3% rebound in July.
- **Bank of England (BOE):** BOE Chief Economist Huw Pill has advocated for earlier rate action to control inflation, which has increased due to geopolitical events. While interest rate futures reflect a modest chance of a near-term tightening, the probability for a November hike is over 70%. BOE Governor Andrew Bailey is expected to provide further context on these comments.

2. US & European Markets

- **US Markets:** Wall Street futures have rallied, and Asian stocks rebounded, driven by easing US rate-hike concerns and positive sentiment towards big technology companies. Global hedge funds, however, have significantly reduced exposure to US software stocks.
- **European Markets:** European equities are pausing after a "bruising week" marked by a global bond market rout, soaring energy costs, and central bank rate anxiety. Germany's DAX is flat, while France's CAC 40 and London's FTSE 100 are slightly down. News includes Volkswagen's "Future Plan 2030" involving job cuts and a 9% operating margin target by 2030, BASF suing Apple for patent infringement, and the ECB granting authorization for the BMPS/Mediobanca merger.

3. Indian Markets & Dalal Street

- **Market Rebound:** Indian equity benchmark indices, Sensex and Nifty, posted a strong recovery on Friday, September 4, ending a four-day losing streak. This rebound was fueled by easing US Fed rate-hike concerns, positive global cues, and strong buying in IT and banking stocks. The Sensex gained over 500 points, and the Nifty crossed 23,900.
- **Sectoral Momentum & Top Gainers:** IT and financial services sectors were major contributors to the rally. SBI Life, HDFC Life, and Reliance Industries were among the top gainers in the Nifty50 index. The Nifty MidCap and SmallCap indices also saw gains.
- **Institutional Flows (FII/DII):** Foreign Institutional Investors (FIIs) turned net buyers on September 1, purchasing shares worth ₹1,143 crore after three consecutive days of selling, indicating renewed confidence. Domestic Institutional Investors (DIIs) continued their strong support, investing ₹1,846 crore, providing stability to the market. On September 3, FIIs saw a net outflow of ₹2,345.87 Cr, while DIIs had a net inflow of +₹4,977.46 Cr.

4. Commodities & Crypto Wire

- **Crude Oil:** Brent crude is holding near six-week highs, on track for a 7% weekly surge, primarily due to the ongoing Iran war and disruptions in the Strait of Hormuz, which have intensified concerns about energy supply and inflation. OPEC+ is expected to keep its oil output policy unchanged for October, having completed a phased rollback of cuts in September, with focus shifting to 2027 quota negotiations.
- **Gold (XAU/USD):** Gold (XAU/USD) has been under pressure, trading below \$4,300, and eyeing the \$4,268-\$4,231 demand zone. This weakness is attributed to higher oil prices, stronger Treasury yields, a stronger US dollar, and a 67% probability of a September Fed rate hike. While some technical analysis suggests potential for a rebound from oversold conditions around \$4,268-\$4,231, critical support is seen around \$4,400-\$4,430. Prediction markets had shown a 100% implied probability of gold reaching \$4,600 in September 2026, driven by central bank demand and geopolitical risks.
- **Crypto Wire:** The Digital Asset Market Clarity Act faces a procedural Senate vote on September 15, but market expectations for its passage before year-end remain low (14-15% odds). The SEC has proposed allowing official share registers to be kept on a blockchain, signaling a move towards distributed ledger technology for stock ownership records. In the UK, the Financial Conduct Authority's (FCA) crypto and stablecoin regulatory regime is finalizing, with an authorization gateway opening on September 30, 2026. Bitcoin has rebounded above \$80,000, with sentiment tied to US interest rate expectations.
