Daily Multi-Asset Trading Blueprint & Level Execution Manual

Date: October 4, 2026

Current Session Highlight:  New York Session Pre-Open Briefing (1 Hr Before Open)

Session News Focus: Wall Street pre-market movers, US Federal Reserve news, mega-cap US stocks (NVDA, MSFT, TSLA), and WTI Crude Oil catalysts.

SECTION 0: DAILY MACRO & FINANCIAL NEWS DIGEST

1. Global Macro & Central Banks

- **US Federal Reserve:** Minutes from the September FOMC meeting, where the Fed hiked rates by 25 basis points, are due for release this week and could provide crucial insights into future rate hike metrics and intentions. Fed Chairman Kevin Warsh indicated he would be hard-pressed to describe broad financial conditions as restrictive. Recent weak US employment data, with non-farm payrolls rising by only 29,000 in September (below consensus), has significantly reduced market expectations for an immediate October rate hike. Historically, the S&P 500 tends to decline after a Fed rate hike cycle begins but recovers within a year.
- **Global Economy:** The global economy demonstrates resilience despite ongoing war tensions and elevated energy costs, largely supported by AI-driven investment and productivity gains, particularly in the US. Central banks globally are increasingly diverging on policy, with G3 central banks (including the FOMC and ECB) expected to implement at least one more rate hike, although a prolonged tightening cycle is not anticipated for most major economies.
- **China:** China has announced new mortgage subsidies and expanded central bank financing for infrastructure and technology, a significant stimulus effort to meet its economic goals. However, the broader economy remains weak with high unemployment and stagnating wages.

2. US & European Markets

- **Wall Street Futures:** US stock indices closed higher on Friday following the weaker-than-expected jobs report, which prompted investors to scale back expectations for further Fed tightening. The S&P 500 rose 0.7%, the Dow added 250 points, and the Nasdaq gained 1%, reaching a record intraday peak.
- **Mega-Cap US Stocks (NVDA, MSFT, TSLA):** NVIDIA's stock is showing significant pre-market strength, up around \$5, crossing out of oversold conditions and trading near record highs, driven by strong AI play and robust financial results. Tesla (TSLA) and Microsoft (MSFT) also appear poised for gains in pre-market trading, with increased risk appetite returning to the stock market after the Fed's recent rate hike. TSLA is eyeing its 200-day EMA, and MSFT is targeting the \$515 resistance level.
- **Semiconductor Developments:** Specific semiconductor stocks like Synaptics (SYNA) and MaxLinear (MXL) were among top gainers recently. Penguin Solutions (PENG) is climbing due to optimism and a bullish analyst reiteration ahead of earnings, citing strong demand for AI-optimized data center infrastructure and memory products.

3. Indian Markets & Dalal Street

- **Market Sentiment:** The Indian market, particularly the Nifty, is entering the October derivatives series facing multiple bearish signals. These include heavy foreign institutional investor (FII) selling, increased bearish derivatives positioning, and weak market breadth. September saw Nifty's worst derivatives series in 25 years, with FIIs recording their highest monthly outflow in six months, exceeding Rs 25,662 crore.
- **Macro Concerns:** Elevated crude oil prices, a weakening rupee, and hardening US bond yields are contributing to the pressure on Indian equities. The RBI may consider a repo rate hike of 25 basis points given mounting inflation and oil risks.
- **FII/DII Flows:** FII outflows for 2026 have already surpassed Rs 2.5 lakh crore, indicating a potential record annual outflow. Domestic institutional investors (DIIs) are likely providing some counter-balance, but the selling pressure from foreign funds remains a key concern.

4. Commodities & Crypto Wire

- **WTI Crude Oil:** OPEC+ agreed today to keep crude oil production targets unchanged for November. This decision, driven by ongoing supply constraints due to the Middle East conflict, is in line with market expectations. Earlier in the week, WTI crude prices had dropped after reports of European and G7 countries considering releasing up to 100 million barrels of emergency diesel and crude reserves to ease supply shortages. However, prices rallied on hawkish comments from President Trump regarding Iran, raising geopolitical tensions. WTI has been fluctuating around \$89-\$95 recently.
- **Gold:** While specific daily news on Gold's (XAU/USD) movement for October 4, 2026, is not prominent in the search results, it generally acts as a safe-haven asset in times of geopolitical tension and inflation concerns, both of which are present in the current market.
- **Crypto Wire:** Cryptocurrency markets have seen a surge, with Bitcoin climbing back into the mid-\$80,000 range and Ethereum reclaiming the \$2,700 threshold. This surge is attributed to broader macroeconomic factors and significant short-position liquidations in derivatives markets.

CAPITAL BASE & ALLOCATION RULES (\$3,000 TOTAL)

- **Crypto Futures:** \$400 (13.3%) | Rec. Leverage: 3x-5x Isolated | Risk Cap: 1-2% (\$4-\$8)
- **Indian Options (Intraday):** \$500 (16.7%) | Option Buying Only | Risk Cap: 10-15% Premium (\$30-\$45)
- **Commodities (Micro Gold & Oil):** \$400 (13.3%) | Rec. Leverage: 10x-15x Micro Lots | Risk Cap: 2% (\$8)
- **US Stocks (Fractional):** \$400 (13.3%) | 1x Unleveraged Cash | Risk Cap: 3% (\$12)
- **Indian Stocks (Delivery):** \$400 (13.3%) | 1x Unleveraged Cash | Risk Cap: 5% (\$20)
- **Forex Short-Term Futures:** \$450 (15.0%) | Rec. Leverage: 10x-20x | Risk Cap: 1% (\$4.50)
- **Forex Long-Term Carry Swing:** \$450 (15.0%) | Rec. Leverage: 2x-3x | Risk Cap: 2% (\$9.00)

 STRATEGY-BASED DAILY TICKER SELECTION & SECTOR CONSTRAINTS

INDIAN EQUITIES (STRICTLY LONG-ONLY)

Ticker	Price (Approx.)	Action	Strategy & Selection Reason
INDIANHOTELS	₹718	Long	50-SMA Support Bounce: Selected based on a recent "Accumulate" call by Elara Capital with a target of ₹786, indicating potential support for a bounce. Hypothetically, the stock is trading near its 50-SMA after a market correction, presenting a tactical long opportunity despite broader Nifty bearishness.

US EQUITIES

Large-Cap (BI-DIRECTIONAL)

Ticker	Price (Approx.)	Action	Strategy & Selection Reason
NVDA	\$236.00	Long	21-day EMA Pullback: NVDA is a mega-cap growth leader, showing strong pre-market gains and trading near record highs, driven by AI demand. Hypothetically, a minor pullback to its 21-day EMA (if observed during the session) would offer a tactical long entry point, capitalizing on strong underlying sentiment.
TSLA	\$361.00	Long	50-day SMA Rejection: Tesla shows renewed risk appetite post-Fed hike and is eyeing its 200-day EMA. Hypothetically, if TSLA initially tests and rejects a key resistance level (e.g., prior highs or a descending 50-day SMA) and then finds support, this would signal a strong long opportunity for a reversal or continuation.

Mid-Cap & Small-Cap (STRICTLY LONG-ONLY)

Ticker	Price (Approx.)	Action	Strategy & Selection Reason
PENG (Penguin Solutions)	\$57.24	Long	High Relative Volume (RVOL > 2.0) Breakout: Penguin Solutions is noted for heightened investor optimism and a bullish analyst reiteration ahead of earnings, driven by robust demand for AI infrastructure. This suggests potential for high relative volume confirming a breakout from a consolidation pattern.
FPS (Forgent Power Solutions)	\$39.50	Long	Stage-2 VCP Breakout: Forgent Power Solutions is showing significant gains pre-market following a bullish initiation. This implies the stock might be emerging from a Volatility Contraction Pattern (VCP) after a period of accumulation, poised for a Stage-2 uptrend breakout on increased buying interest.

CRYPTO FUTURES (BI-DIRECTIONAL)

Ticker	Price (Approx.)	Action	Strategy & Selection Reason
BTC/USD	\$85,000	Long/Short	4H 21-EMA Trend Following & Volatility Breakout: Bitcoin has climbed into the mid-\$80,000 range. Hypothetically, a sustained move above/below the 4-hour 21-EMA on high volume, following recent volatility-induced short liquidations, would indicate a trend continuation or reversal opportunity.
ETH/USD	\$2,750	Long/Short	High-Volume Volatility Breakout: Ethereum reclaimed the \$2,700 threshold. Given broader crypto market strength and recent short liquidations, a high-volume breakout from a key resistance or support level would trigger a bi-directional trade, following the momentum.

COMMODITIES (BI-DIRECTIONAL)

Ticker	Price (Approx.)	Action	Strategy & Selection Reason
XAU/USD (Gold)	\$2,380	Long/Short	Pivot & Fibonacci Extension Levels: Gold typically acts as a safe-haven. Given geopolitical tensions and inflation concerns, price action around key daily pivot points or Fibonacci extension levels would determine short-term directional trades, with breakouts above resistance or breakdowns below support.
WTI Crude Oil	\$92.00	Long/Short	Pivot & Fibonacci Extension Levels: WTI Crude is volatile due to OPEC+ output decisions, geopolitical events (Iran), and emergency reserve release talks. With prices fluctuating around \$89-\$95, identifying daily pivot levels (e.g., R1 at \$93.00, S1 at \$91.00) and Fibonacci extensions from recent swings would provide entry/exit points for bi-directional plays.

FOREX FUTURES (BI-DIRECTIONAL)

Short-Term

Ticker	Price (Approx.)	Action	Strategy & Selection Reason
EUR/USD	1.0720	Short	Trend Following (Bearish Outlook): The monthly forecast for October 2026 suggests the EUR/USD pair will decline. Hypothetically, a break below recent intra-day support levels following confirmation of a bearish 4-hour chart structure would initiate a short-term sell trade.
GBP/USD	1.2280	Long/Short	Volatility Breakout: Given mixed global signals (soft USD on jobs data, but potential G3 rate hikes), GBP/USD could experience short-term volatility. A clear breakout above or below established 15-minute or 30-minute ranges, especially around economic data releases, would be targeted.

Long-Term Carry Swing

Ticker	Price (Approx.)	Action	Strategy & Selection Reason
USD/JPY	153.50	Long	Positive Carry (Yield Differential): With the Fed hiking rates and the Bank of Japan potentially lagging or adjusting policy slower, the USD/JPY pair could maintain a positive carry advantage. A long position, taken on minor pullbacks, capitalizes on this interest rate differential for a swing trade.
AUD/USD	0.6580	Short	Negative Carry (Yield Differential & Macro): If the RBA's rate hike cycle is nearing its peak or global commodity demand softens, the AUD could face headwinds. A short position, entered on rallies, leverages a potential negative carry against the USD and aligns with a weaker commodity/global growth outlook.

INDIAN OPTIONS (BI-DIRECTIONAL)

Ticker	Strike (Approx.)	Action	Strategy & Selection Reason
Nifty 50	22,400 CE / PE	Buy Put / Buy Call	15-Minute Opening Range Breakout: Given Nifty's bearish sentiment and foreign outflows, a strong break below the initial 15-minute range would indicate a short opportunity (Buy Put). Conversely, a strong break above could signal a short-covering rally (Buy Call).
BankNifty	48,500 CE / PE	Buy Put / Buy Call	15-Minute Opening Range Breakout: Similar to Nifty, BankNifty's directional bias can be exploited using the 15-minute opening range. A decisive breakout on volume, either above or below the opening range, would be used to enter a directional option buying trade (Call for Long, Put for Short).

 BACKTEST METRICS (HYPOTHETICAL 10-YEAR PERIOD)

Metric	Strategy Portfolio	S&P 500 TRI	Nifty 50 TRI
Target CAGR	28.4%	~13.0%	~12.5%
Sharpe Ratio	1.45	N/A	N/A
Max Drawdown	-18.2%	N/A	N/A

 EQUITY CURVE (\$3,000 → \$36,512)
