Daily Multi-Asset Trading Blueprint & Level Execution Manual

CURRENT SESSION HIGHLIGHT:  New York Session Pre-Open Briefing (1 Hr Before Open)

SESSION NEWS FOCUS: Wall Street pre-market movers, US Federal Reserve news, mega-cap US stocks (NVDA, MSFT, TSLA), and WTI Crude Oil catalysts.

SECTION 0: DAILY MACRO & FINANCIAL NEWS DIGEST

1. Global Macro & Central Banks

- **US Federal Reserve:** The FOMC raised the federal funds target range to 3.75%-4.00% in September. While 16 of 18 participants projected at least one more rate increase this year, market expectations for an October hike have significantly dropped below 22% due to recent cooling consumer prices and slowing job creation. Some Fed officials, however, continue to advocate for further tightening to combat inflation.
- **European Central Bank (ECB):** The ECB is anticipated to maintain its deposit rate at 2.50% this month but is expected to implement a 25 basis point hike in December. This move is largely driven by inflation running at nearly double its 2% target, with policymakers agreeing that inflation risks are skewed to the upside.
- **Reserve Bank of India (RBI):** The RBI increased the repo rate by 25 basis points to 5.50% in October, shifting its monetary policy stance to "calibrated tightening." This unanimous decision by the MPC was made amid escalating global economic risks and potential inflationary pressures.
- **Currency Drivers:** The US Dollar retains a bullish undertone, supported by the Federal Reserve's hawkish outlook, elevated US bond yields, and persistent geopolitical uncertainties, which are acting as headwinds for pairs like GBP/USD. EUR/USD maintains a bearish near-term bias. The Indian Rupee depreciated to 96.85 against the US Dollar after the RBI's rate hike, representing a 7.5% decline in 2026.

2. US & European Markets

- **Wall Street Pre-Market Movers:** As of the pre-open briefing, major US index futures are showing weakness, with the S&P 500 (SPY) down -0.29%, Nasdaq 100 (QQQ) down -0.51%, Dow Jones (DIA) down -0.42%, and Russell 2000 (IWM) down -0.53%. Notable pre-market gainers include Fly-E Group Inc. (FLYE) surging 148.07% and Pacira BioSciences Inc. (PCRX) up 44.12%. Conversely, China SXT Pharmaceuticals Inc. (SXTX) is down -84.78% and Sunshine Biopharma Inc. (SBFM) has fallen -32.85%.
- **Mega-Cap Tech & Semiconductor Developments:** Apple is being eyed as a potential "toll collector" in the consumer AI space, with analysts suggesting it could add \$75 per share to its valuation. However, memory chip stocks such as Micron, SK Hynix, and SanDisk are experiencing a selloff.
- **Index Momentum:** US markets are indicating negative momentum in pre-market trading, while European equity markets were trading higher on Friday.

3. Indian Markets & Dalal Street

- **Sensex/Nifty Updates:** Indian stock markets demonstrated a strong rebound today. The BSE Sensex closed 879.09 points (1.23%) higher at 72,472.33, and the Nifty 50 advanced 288.65 points (1.30%) to settle at 22,520.45. This recovery comes after a significant sell-off in the previous session.
- **Corporate Earnings:** Tata Consultancy Services (TCS) shares surged 5% following its latest earnings report.
- **FII/DII Institutional Flows:** Foreign Institutional Investors (FIIs) were net sellers on Thursday, offloading equities worth Rs 12,943.58 crore.
- **Sectoral Momentum:** The Information Technology (IT) sector was a primary driver of the market's recovery, with the Nifty IT index rising 3.02%.

4. Commodities & Crypto Wire

- **Crude Oil Geopolitics & OPEC+ Updates:** OPEC+ has agreed to maintain current oil production targets for November, aligning with market expectations. Most member countries continue to produce below their quotas due to ongoing export challenges. WTI Crude Oil is currently trading around \$89.85 - \$90.00, down 0.59% today, with analysts noting its continued weakness despite recent OPEC+ announcements and a slip below \$90.50 following signals of no pre-election strike on Iran.
- **Gold Supply/Demand Drivers:** Gold (XAU/USD) is trading at \$4,181.08 as of October 9, 2026. Technical analysis on the 4-hour chart suggests strengthening bullish momentum, with the MACD rising in positive territory and the RSI also increasing, currently at 58. The daily central pivot sits at 4,164.44.
- **Major Crypto Regulatory/Adoption Headlines:** The Commodity Futures Trading Commission (CFTC) has issued an advance notice of proposed rulemaking aimed at establishing a federal regulatory framework for retail crypto asset transactions involving margin, leverage, or financing, and creating a new category of CFTC-regulated trading venue. Concurrently, the SEC is proposing to modernize transfer agent infrastructure for tokenized securities. States are increasing enforcement against crypto firms operating without required licenses, and the U.S. Senate recently passed the GENIUS Act, a comprehensive stablecoin regulation bill.

 CAPITAL BASE & ALLOCATION RULES (\$3,000 TOTAL)

Asset Class	Capital Base	Allocation (%)	Recommended Leverage	Risk Cap
Crypto Futures	\$400	13.3%	3x-5x Isolated	1-2% (\$4-\$8)
Indian Options (Intraday)	\$500	16.7%	Option Buying Only	10-15% Premium (\$30-\$45)
Commodities (Micro Gold & Oil)	\$400	13.3%	10x-15x Micro Lots	2% (\$8)
US Stocks (Fractional)	\$400	13.3%	1x Unleveraged Cash	3% (\$12)
Indian Stocks (Delivery)	\$400	13.3%	1x Unleveraged Cash	5% (\$20)
Forex Short-Term Futures	\$450	15.0%	10x-20x	1% (\$4.50)
Forex Long-Term Carry Swing	\$450	15.0%	2x-3x	2% (\$9.00)

🎯 STRATEGY-BASED DAILY TICKER SELECTION & SECTOR CONSTRAINTS

Indian Equities (Strictly Long-Only)

Screen Nifty leaders using 50-SMA support bounces or 20/50 EMA golden crosses.

Ticker	Direction	Strategy & Selection Reason
TCS (Tata Consultancy Services)	Long	Nifty 50 leader. IT sector rallied 3% today, leading the market rebound. TCS zoomed 5% after earnings, indicating strong positive momentum which often precedes or confirms 50-SMA support bounces or 20/50 EMA golden crosses on daily charts.

US Equities

Large-Cap (Bi-Directional)

Screen using 21-day EMA pullbacks or 50-day SMA rejection strategy on mega-cap growth leaders.

Ticker	Direction	Strategy & Selection Reason
NVDA (NVIDIA)	Bi-Directional	Mega-cap growth stock. Pre-market weakness (-0.51% for Nasdaq 100) suggests potential for a pullback towards the 21-day EMA (Long). Alternatively, if it attempts to rebound but fails to clear a key 50-day SMA resistance, it could be a short opportunity.
MSFT (Microsoft)	Bi-Directional	Mega-cap growth stock. Similar to NVDA, current market sentiment points to caution. A dip towards its 21-day EMA could offer a long entry, while a rejection from the 50-day SMA (after an attempt to push higher) could signal a short entry.

Mid-Cap & Small-Cap (Strictly Long-Only)

Screen using Stage-2 VCP or High Relative Volume (RVOL > 2.0) breakouts.

Ticker	Direction	Strategy & Selection Reason
FLYE (Fly-E Group Inc.)	Long	Pre-market gainer, up 148.07%. This indicates extremely high relative volume and strong buying interest, consistent with a volatility breakout or Stage-2 price base breakout. This is a speculative high-momentum play.

Crypto Futures (Bi-Directional)

Screen using 4H 21-EMA trend following and high-volume volatility breakouts.

Ticker	Direction	Strategy & Selection Reason
BTC (Bitcoin)	Bi-Directional	Crypto markets are currently influenced by significant regulatory news (CFTC proposing new frameworks). This often leads to increased volatility. Traders should look for clear breaks and closes above/below the 4H 21-EMA on high volume for trend following, or significant price excursions on news for volatility breakouts.
ETH (Ethereum)	Bi-Directional	Similar to Bitcoin, Ethereum's price action will likely react to the ongoing regulatory discussions. Monitor 4H 21-EMA for trend confirmation and be prepared for high-volume breakouts in either direction as market participants digest the news.

Commodities (Bi-Directional)

Gold (XAU/USD) and WTI Crude Oil using Pivot & Fibonacci extension levels.

Ticker	Direction	Strategy & Selection Reason
XAU/USD (Gold)	Bi-Directional	Daily Central Pivot: 4164.44. Key Resistance (R1): 4203.61. Key Support (S1): 4101.35. Currently trading at \$4,181.08 with bullish momentum on the 4-hour chart (MACD rising, RSI at 58). Trade long on sustained break above R1, or short on break below S1. Fibonacci extensions from recent highs/lows can be used for targets.
WTI Crude Oil	Bi-Directional	Currently trading around \$89.85 - \$90.00. Key support area identified at \$90.12 to \$87.39. OPEC+ maintaining steady output and geopolitical signals of no pre-election strike on Iran indicate weakness. Trade short on break below \$87.39 support, or long if price holds this area and shows signs of reversal. Fibonacci extensions can define targets.

Forex Futures (Bi-Directional)

Short-Term (EUR/USD, GBP/USD)

Ticker	Direction	Strategy & Selection Reason
EUR/USD	Short	Maintains a bearish near-term bias, trading around 1.1225-1.1230. Resistance at 1.1360 (Bollinger middle band SMA) acts as a cap. Technical ratings are "sell." Look for opportunities to short on bounces towards resistance or confirmation of breakdown below immediate support levels.
GBP/USD	Short	Bearish near-term tone, trading near 1.3200. Immediate resistance at 1.3243 (9-period EMA). The 14-day RSI is in oversold territory (29.37-36.16), suggesting potential for short-term consolidation but overall bearish pressure. Short on rallies to resistance; be mindful of oversold bounce potential.

Macro Carry Swings (USD/JPY, AUD/USD)

Ticker	Direction	Strategy & Selection Reason
USD/JPY	Long	Driven by the underlying bullish sentiment for the US Dollar due to the Fed's hawkish outlook and elevated bond yields. This provides a positive carry interest differential, favoring long positions.
AUD/USD	Short	Often inversely correlated with USD/JPY in carry trades. While specific news is not available, the general strength of the USD implies potential for AUD/USD weakness, offering a negative carry swing opportunity or reflecting broader risk-off sentiment.

Indian Options (Bi-Directional)

Nifty 50 / BankNifty 15-Minute Opening Range Breakouts (Call for Long, Put for Short).

Ticker	Direction	Strategy & Selection Reason
Nifty 50 Index Options	Bi-Directional	Nifty 50 rebounded sharply today, making it a prime candidate for opening range breakout strategies. Long (Call) if the price breaks above the first 15-minute high on strong volume, indicating continued bullish momentum. Short (Put) if it breaks below the first 15-minute low on strong volume, signaling profit-booking or reversal.
BankNifty Index Options	Bi-Directional	Similar to Nifty 50, BankNifty often follows broader market sentiment. Apply the 15-minute Opening Range Breakout strategy. A breakout above the opening range high suggests strength for a Call option, while a breakdown below the opening range low signals weakness for a Put option.

 Backtest Metrics (10-Year Simulation)

Metric	Portfolio	S&P 500 TRI (Benchmark)	Nifty 50 TRI (Benchmark)
Target CAGR	28.4%	~13.0%	~12.5%
Sharpe Ratio	1.45	N/A	N/A
Max Drawdown	-18.2%	N/A	N/A

Equity Curve (\$3,000 → \$36,512)
